Martin County Health and Human Services	

EXECUTIVE SUMMARY

OVERVIEW

In 2019, the Florida Department of Health in Martin County engaged the Health Council of Southeast Florida (HCSEF) to facilitate a comprehensive, county-wide health assessment for Martin County. A community health assessment is a systematic method of identifying unmet health care and human service needs of a population and identifying possible interventions to meet those needs. Conducted with the collaboration of a wide range of community partners, the overall aim of this community health assessment was to identify key areas where action can be taken to enhance health and reduce inequities in Martin County's communities. The assessment also satisfies the Public Health Accreditation Board (PHAB) health care regulatory requirements for the Local Health Department in Martin County.

This community health assessment provided the opportunity to:

- Assess the population's health status
- Highlight areas of unmet need
- Present the community's perspectives
- Provide suggestions for possible interventions
- Highlight recommendations that policymakers might consider when setting new policy goals and objectives for health improvement activities

The Florida Department of Health in Martin County selected a community-driven process with the overarching goal to mobilize and engage the community, conduct planning driven by the community, and develop partnerships to strengthen Martin County's infrastructure and public health system. The Mobilizing for Action through Planning and Partnerships (MAPP) model was chosen as the best process to create a healthy community and a better quality of life by increasing the visibility of public health within the community, creating a stronger public health infrastructure and engaging the community and creating community ownership for public health issues. This process involved the use of four assessments, comprised of several components, to create a well-rounded base of information, including:

- Community Health System Assessment
- Community Themes and Strengths Assessment
- Local Public Health System Assessment
- Forces of Change Assessment

Data was collected, analyzed and compiled for this assessment to enable and guide health care providers, managers, local health department officials, health and program planners, and community leaders to identify health indicators within Martin County that present areas of concern, gaps in care or services and opportunities for improvement. The information provided in this assessment may be used to identify opportunities to change and improve future health planning initiatives.

METHODOLOGY

At the request of the Florida Department of Health in Martin County, the Health Council of Southeast Florida (HCSEF) facilitated this community health assessment process using the Mobilizing for Action through Planning and Partnerships (MAPP) model. This model was developed by the National Association of County and City Health Officials (NACCHO) and the Centers for Disease Control and Prevention (CDC) to provide a strategic approach to community health improvement.

MAPP is an interactive process that can improve the efficiency, effectiveness and performance of local public health systems. It was designed to help communities achieve optimal health and high quality of life for all residents. By using MAPP, the Health Council of Southeast Florida and the Florida Department of Health in Martin County were able to thoroughly explore the inequities and disparities in the community. This provided sufficient information to strategically identify strengths and opportunities for improvement within the community.

This model uses a solution-oriented, community participation approach, which fosters a strong public health system that is focused on improving the most pressing issues. The six key elements of the MAPP process include:

1. Build on previous experiences and lessons learned
2. Use of traditional strategic planning concepts
3. Focus on the creation and strengthening of the local public health system
4. Create governmental public health leadership
5. Use of the 10 Essential Public Health Services to define public health activities and assess these activities in the community
6. Use of the following four MAPP assessments to provide an understanding of the strengths and weakness in the community and promote the development of a strategic plan:
 - Community Health Status Assessment
 - Community Themes and Strengths Assessment
 - Local Public Health System Assessment
 - Forces of Change Assessment

This report includes quantitative secondary data from national, state and local database systems and primary qualitative data. Quantitative data were obtained from secondary sources, including but not limited to the: U.S. Census Bureau, Florida Agency for Health Care Administration (AHCA), Florida Department of Health (FDOH), Florida Department of Children and Families (DCF), Centers for Disease Control and Prevention (CDC), Florida's Bureau of Vital Statistics, Florida Department of Juvenile Justice and Florida Department of Education. The qualitative data are a result of primary data collection efforts through community surveys, community meetings, focus groups and key informant interviews. Data was collected, analyzed and compiled for this assessment to enable and guide Martin County service providers, educators, planners, funders and community leaders in identifying indicators within the community that are areas of concern, gaps in services and opportunities for improvement related to the well-being of community residents.

Quantitative data tables and figures in this report are formatted to facilitate review, examination and utilization by the community. In many cases, the data, as it was gathered from the source, contained confidence intervals or margins of error, which are statistical calculations that refer to the potential variation in the numbers shown when the data is gathered from a subset of the population. These have been omitted from this assessment in an effort to make the data more approachable to the community.

COMMUNITY HEALTH STATUS ASSESSMENT

INTRODUCTION

The goal of the Community Health Status Assessment (CHSA) is to identify priority issues related to community health and quality of life. This section highlights the demographic and socioeconomic, health status, and health resources availability and access profile for Martin County.

The demographic and socioeconomic profile provides details on a number of key demographic, social and economic indicators, such as population, presented by various cohorts, e.g., age bands, gender and race, income, numbers of individuals in poverty, educational attainment, employment, housing and transportation.

The health status of the community includes data on various indicators of maternal and child health (such as prenatal care access, birth rates, infant mortality, child immunization rates); behavioral health (including domestic violence, alcohol consumption, and violence and injury); hospital utilization data; and morbidity and mortality trends as reflected by data on chronic diseases, infectious diseases and leading causes of death.

The health resources availability and access profile section studies the obtainability of health care resources in Martin County and includes information on health insurance coverage, Federally Qualified Health Centers (FQHCs), medically underserved populations and areas (MUPs/MUAs) and the health care safety net in the community. Below are highlights of each of the three profiles in the CHSA.

Demographic and Socioeconomic Profile

- In 2018, Martin County had a population of 157,581, representing .8% of Florida's population.
- Thirty-four percent of Martin County residents were 62 years and over.
- Thirteen percent of the population in the county identified as Hispanic or Latino.
- Thirteen percent of Martin County residents reported speaking a language other than English at home; 43.2% of those individuals were reported to speak English less than "very well."
- In 2018, 11% of the population in Martin County was living below the poverty level.
- In 2018, the percentage of individuals living below the poverty level that identified as Some other race was more than triple that of individuals that identified as White, followed by two and a half times higher among those who identified as Black or African American.
- Similarly, individuals identifying as Hispanic or Latino origin saw rates that were over two and a half times higher than individuals identifying as Non-Hispanic or Latino, 23.0% and 8.5% respectively.
- In 2018, there was a high school graduate rate of nearly 88% in the county compared to 86.1% in the state.
- In 2018, there was an unemployment rate of 5.3% in the county.
- In January 2019, there were 219 homeless adults and 86 homeless children for a total of 305 homeless individuals, which is similar to the count from 2018.

Health Status Profile

- In 2019, one quarter of mothers in the county had less than adequate prenatal care, which was similar to the state. For this rate a higher percentage of Black mothers in the county had less than adequate prenatal care compared to White mothers, (39.2% and 21.5% respectively).
- In 2019, the suicide age-adjusted death rate in Martin County was 16.0 per 100,000 population with a total of 32 suicides. In 2019, the suicide rate among the White population was 3 times higher than the Black population, 16.8 and 5.8 per 100,000 respectively.
- In 2019, the rate of coronary heart disease hospitalization was 203.6 per 100,000, which was lower than the state (274.1 per 100,000). This rate was higher among the Black population in the county compared to the White population these rates were 286.2 and 195.1 per 100,000 –nearly 1.5 times higher
- In 2019, the diabetes hospitalization rate in the county was 1,380 per 100,000, which was lower than the state (2,350.4 per 100,000). This rate was 3.6 times higher among the Black population compared to the White population (4,249.2 compared to 1,175.9 per 100,000 respectively).
- In 2019, the hospitalization rate due to stroke in the county was 227.5 per 100,000 which was lower than the state (236.9 per 100,000). Among the Black population, this rate was higher than among the White population rates were 269.5 and 217.4 per 100,000, respectively
- In 2019 the CLRD hospitalization rate was 307.5 per 100,000, which was higher than the state 257.6 per 100,000. Within the county, the rate among residents who identified as Black & Other was much higher rate than the White population, 546.1 compared to 275.5 per 100,000 respectively.
- In 2017, the cancer incidence rate in the county was higher than the state rate, 455.4 and 441.9 per 100,000 respectively.
- In 2019, the hospitalization rate due to non-fatal unintentional falls in the county was higher than the state, 546.8 and 353.8 per 100,000 respectively. This rate was 4 times higher among the Black population compared to the White population, 571.6 and 132.1 per 100,000 respectively.
- In 2019, the rate of preventable hospitalizations under 65 from dental conditions was 10.1 per 100,000, which was lower than the state (11.9 per 100,000)
- In 2016, the percentage of adults who reported being overweight or obese in the county was slightly lower than the state 56% and 63% respectively
- In 2018, the percentage of middle school students that reported being overweight or obese was lower than the state, 21% and 30.3% respectively. Similarly, the percentage of high school students who are overweight or obese was lower than the state, 26.9% and 30.5% respectively
- The leading cause of death in the county was heart disease, which accounted for 22.7% of total deaths and had an age-adjusted death rate of 111 per 100,000.
- The second leading cause of death in the county was cancer, which accounted for 22.6% of all deaths and had an age-adjusted death rate of 129.1 per 100,000.
- Other notable findings include the age-adjusted death rate due to unintentional injury in the county was higher than in the state (63.7 compared to 55.5) and the age-adjusted suicide death rate in the county was higher than the state (16 compared to 14.5).

Health Resources Availability and Access

- As of 2020, the two primary care health professional shortage areas/populations in Martin are Indiantown and the Martin Correctional Institution. These are also mental health professional shortage areas.
- As of 2020, two dental health professional shortage areas/populations are low-income population and the Martin Correctional Institution.
- As of 2020, Martin County has one medically underserved area, which is Indiantown.
- In 2019, 11.5% of the population in Martin County was uninsured.
- In 2019, 40% of residents who identified as Some other race were uninsured, followed by American Indian (27%) and Black (23%).
- In 2019, over a quarter of the Hispanic population were uninsured.
- In 2019, 29% of adults ages 26 to 34 years old were uninsured.

METHODOLOGY

The Community Health Status Assessment is a compilation of local, state and peer community data that is collected and analyzed to identify health disparities concerning age, gender, racial and population subgroups. It answers the questions:

- How healthy are Martin County residents?
- What does the health status of our community look like?

Analysis of five years of trend data and existing data sources contributed to the compilation of the Community Health Status Assessment. The purpose of this assessment is to identify health indicators within the community that present areas of concern, gaps in care or services and opportunities for improvement. Specifically, the Community Health Assessment includes information and data on the following areas:

- Demographic characteristics
- Socioeconomic characteristics
- Maternal and child health
- Oral health
- Behavioral health
- Death, illness and injury
- Infectious diseases
- Health resource availability

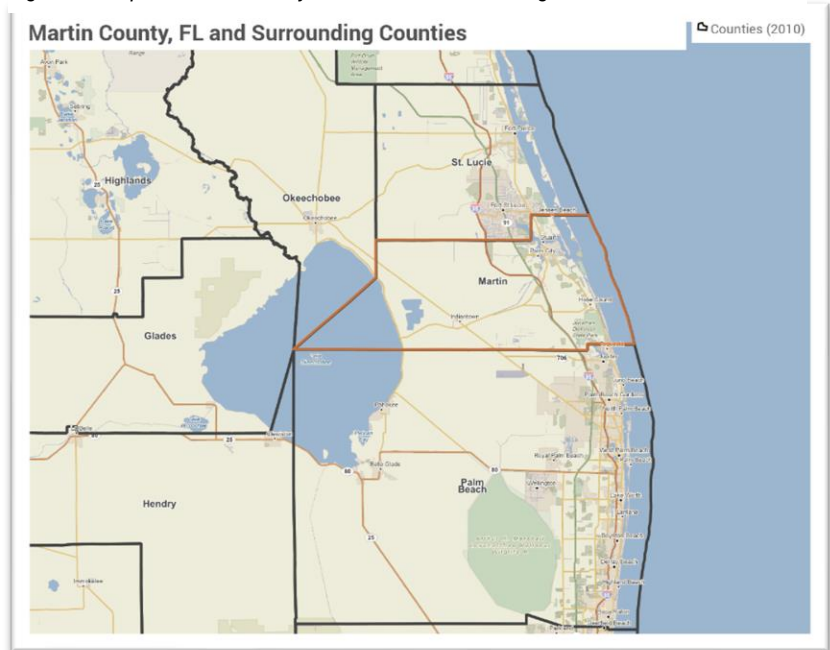

HCSEF conducted a comprehensive review of secondary data sources to obtain the most reliable and current data for the Community Health Assessment. Secondary data sources include but are not limited to the US Census Bureau – American Community Survey, Florida Department of Health, Florida Department of Education, Florida Department of Law Enforcement, Florida Youth Substance Abuse Survey (FYSAS), Behavior Risk Factor Survey and Surveillance (BRFSS), and Agency for Health Care Administration (AHCA). Some sources are rotated and asked in alternate years; therefore, results from those sources may be presented in varying years or multi-year estimates. In addition, geographic data are present in the format in which they are available (i.e., zip code and census county division). The information within this report may be used to identify health needs in the community and guide future health planning initiatives.

DEMOGRAPHIC AND SOCIOECONOMIC PROFILE

Martin County is located in the Treasure Coast region of Florida and was established August 5, 1925 by an Act of the Florida legislation. The county was named for John W. Martin who was the Governor of Florida from 1925 to 1929.¹ Martin County is the fifth largest county by land area with has a total area of 543 square miles (1,410 km²) of land. It is bordered by St. Lucie County to the north, Palm Beach County to the south, Hendry County to the west, Glades County to the southwest and Okeechobee County to the northwest.

Martin County is comprised of various charming small towns and five municipalities: Stuart, Indiantown, Jupiter Inlet, Ocean Breeze, and Sewall's Point. Stuart is the county seat and by the authority of the Constitution of the State of Florida, the Martin County Board of County Commissioners shared the functions of government with Martin County's Constitutional Officers.²

Figure 1: Map of Martin County Florida and Surrounding Counties

The demographic and socioeconomic characteristics of the residents of Martin County are highlighted in this section. These characteristics provide context for the health care needs of the community and are indicators and predictors for health care utilization patterns and health outcomes. Furthermore, the demographic and socioeconomic profile of a community provides information important in the identification of barriers to accessing health care services.

Data in this assessment is presented for Martin County and in many cases, for comparison purposes, data for the state of Florida is provided. Throughout the assessment, for certain health indicators there are references to the Healthy People 2030 target; these are provided to provide a benchmark for data and to aid in goal-setting and planning activities.

DEMOGRAPHIC CHARACTERISTICS

POPULATION

This table shows the population in Martin County and Florida in 2018. Martin County's population was 157,581, which represents close to 1% of the State's overall population.

Table 1: Total Population, Martin County and Florida, 2018

Martin County		Florida	
Population	Percent	Population	Percent
157,581	0.8%	20,598,139	100.0%

Source: U.S Census Bureau, 2014-2018 American Community Survey 5-Years Estimates, 2018
Compiled by: Health Council of Southeast Florida, 2020

POPULATION BY SEX

According to the National Institutes of Health, sex can have a significant influence on the health outcomes of an individual, so it is important to consider this factor when developing a comprehensive health assessment.³ Table 2 highlights the sex distribution in Martin County as it compares to the state of Florida in 2018. There were slightly more female residents in Martin County compared to males (49.5% and 50.5%, respectively). A similar pattern is observed statewide.

Table 2: Population by Sex, Martin County and Florida, 2018

	Martin County		Florida	
	Count	Percent	Count	Percent
Male	78,002	49.5%	10,071,925	48.9%
Female	79,579	50.5%	10,526,214	51.1%
Total population	157,581	100.0%	20,598,139	100.0%

POPULATION BY AGE

Shown in the table below is the population by age in 2018 for Martin County and the state. Population estimates for Martin County indicate that the majority of its population encompassed residents 65 and older which made up just over 30% of its total population, compared to close to 20% at the state-level. Consequently, the median age in Martin County is higher than the statewide median age with 51.9 and 41.9, respectively. Reports predict that by the year 2050, the number of older adults over the age of 80 will triple globally.⁴ As such, there will be an increasing need for services in the home, the community, and institutional settings.

Table 3: Population by Age, Martin County and Florida, 2018

	Martin County		Florida
	Count	Percent	Percent
Total Population	157,581	100%	100%
Under 5 years	6,439	4.1%	5.4%
5 to 9 years	6,168	3.9%	5.5%
10 to 14 years	8,600	5.5%	5.7%
15 to 19 years	8,009	5.1%	5.8%
20 to 24 years	7,055	4.5%	6.2%
25 to 34 years	14,248	9.0%	12.9%
35 to 44 years	14,823	9.4%	12.1%
45 to 54 years	20,515	13.0%	13.3%
55 to 59 years	11,861	7.5%	6.8%
60 to 64 years	12,452	7.9%	6.4%
65 to 74 years	23,548	14.9%	10.9%
75 to 84 years	15,957	10.1%	6.2%
85 years and over	7,906	5.0%	2.6%
Median age (years)	-	51.9	41.9
18 years and over	131,354	83.4%	79.9%
21 years and over	126,833	80.5%	76.2%
62 years and over	54,851	34.8%	23.5%
65 years and over	47,411	30.1%	19.7%

⁴ Barron J., Jaul E. Age-Related Diseases and Clinical and Public Health Implications for the 85 years old and Over Population. Front Public Health [Internet]. 2017 [cited 2020 Apr 10]; 5:335. Accessed from <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5732407/>

This table shows the population change by age group between 2014 and 2018 for individuals living in Martin County. Between 2014 and 2018, Martin County's population increased by 4%, at a .8% annual growth rate. The largest percent growth change was among the population 60-64 years (15%), 65-74 years (10%), 75-84 years (8%), and 85 years and over (7%). Therefore, the median age in the county slightly increased from 50.7 to 51.9. Other significant points to note are the population 5-9 years has an annual growth rate of -1.1%, the population 45-54 years has an annual growth rate of -0.7%, and the population 60-64 years has an annual growth rate of 3%.

Table 4: Population Change by Age Group, Martin County, 2014 and 2018

	2014	2018	Percent Growth	Annual Growth Rate
Total population	151,586	157,581	4.0%	0.8%
AGE				
Under 5 years	6,254	6,439	3.0%	0.6%
5 to 9 years	6,523	6,168	-5.4%	-1.1%
10 to 14 years	8,021	8,600	7.2%	1.4%
15 to 19 years	7,950	8,009	0.7%	0.1%

POPULATION BY RACE AND ETHNICITY

Systemic racism and discrimination can affect an individual's health status, thus making race and ethnicity important factors to consider when implementing strategies for health improvement. Close to 88% of Martin County residents identified as White, followed by 5.8% of residents who identified as Black or African American. It is important to note that even though a similar pattern is observed at the county- and state-level, a significantly higher percentage of Martin County residents identified as White compared to the state overall (87.8% compared to 75.4%). Conversely, a substantially higher percentage of residents, at the state-level, identified as Black or African American compared to Martin County (16.1% compared to 5.8%).

Table 5: Population by Race and Ethnicity, Martin County and Florida, 2018

	Martin County		Florida
	Count	Percent	Percent
Total population	157,581	100.0%	20,598,139

POPULATION BY SUB-COUNTY DIVISIONS

Where you live can impact your health; therefore, it is important to present data at the sub-county level. Census County Division (CCD) is a subdivision of a county established by the cooperative efforts of the Census Bureau and local and state governments in 21 states, Florida being one of these states. CCDs have visible, permanent or stable boundaries that are referred to for the collection, presentation, and analysis of census statistics.⁵ Martin County has three CCDs: Stuart, Port Salerno-Hobe Sound and Indiantown.

Figure 2: Martin County Census County Divisions

The table below depicts the population by sex, age, race and ethnicity in 2018 for Martin County's three CCDs. Stuart CCD was the most populous and represented approximately 45% of the total population in Martin County – while Indiantown CCD was the least populated, representing 13.3% of the total. When all three CCDs are compared, residents who identified as Black or African American are represented the most in Indiantown CCD with 11.1% and are represented the least in Stuart CCD (4.8%). By comparison, close to 91% of residents in Stuart CCD identified as White compared to 74.8% of residents in Indiantown CCD who identified with this racial group. Indiantown CCD also had the highest percentage of residents who identified as Hispanic (30.2%), while only 8.2% of residents in Stuart identified as Hispanic.

PLACE OF BIRTH

It is important to understand the ancestry of the population in Martin County because factors such as language and culture may affect the health of those populations. The table below shows the population by place of birth in Martin County and Florida in 2018. One-fifth of the population in Martin County was born outside of the country, which is half that of the state. Nearly 4% of the population is from Central America, which is slightly higher than the state.

Table 7: Population by Place of Birth, Martin County and Florida, 2018

As mentioned above, it is important to know where individuals living in Martin County were born as they may have different cultural characteristics, which can affect their health outcomes. This table shows the population who was born in the Americas in Martin County and Florida in 2018 by country. Nearly 2% of the population in Martin County is from Guatemala, which is almost four times as much as the state.

Table 8: Population by Place of Birth in the Americas, Martin County and Florida, 2018

HOUSEHOLDS

According to the United States Census Bureau, a household consists of all the people who occupy a housing unit. The householder refers to the person (or one of the people) in whose name the housing unit is owned or rented (maintained) or if there is no such person, any adult member, excluding roomers, boarders, or paid employees. A household includes the related family members and all the unrelated people. A family is a group of two people or more (one of whom is the householder) related by birth, marriage, or adoption and residing together. A family household is a household maintained by a householder who is in a family and includes any unrelated who may be residing there. A nonfamily household consists of a householder living alone (a one-person household) or where the householder shares the home exclusively with people to whom he/she is not related.⁶

This table shows households in Martin County and Florida in 2018. Of the 63,865 households in Martin County, 61% were family households and 31% were nonfamily households. Almost half of the households in the county were married-couple families, 3% were male householders with no wife present and 8% were female householders with no husband present. A third of households in Martin County were those where the householder was living alone and a fifth of householders are those who live alone and are 65 years and over, which is more than 7% higher than the state.

GRANDPARENTS

Children may live with and be the financial responsibility of their grandparents due to a number of reasons including the parents may be in the household but cannot work or are not working or the parents may not be present in the household.⁷ Nationally, the number of grandparents and other older relatives who are caring for children is significant and growing, in part due to the opioid crisis.⁸ Being financially responsible for a grandchild can be difficult financially for grandparents, especially if they are living on a fixed income. Additionally, children of grandparents who have not been made legal guardians of the child or children may be unable to receive benefits such as SNAP or Medicaid for which they would otherwise qualify. This table shows grandparents living with and responsible for grandchildren in Martin County and Florida in 2018. Almost 35% of grandparents in the county that live with their grandchildren under 18 years are responsible for their grandchildren, which is 5% more than the state. Additionally, 15% of grandparents that live with their grandchildren have been responsible for their grandchildren for five or more years.

SOCIOECONOMIC CHARACTERISTICS

POVERTY

Poverty is an important factor to include in a comprehensive health assessment as individuals in poverty are at increased risk for mental illness, chronic disease, higher mortality, and lower life expectancy.⁹

The table below shows the Federal Poverty Level income numbers for 2020 by the United States Department of Health and Human Services.

Table 15: Poverty Guidelines, 2020

The table below shows poverty status by County Census Division (CCD) in Martin County by age and sex in 2018. It is important to look at the poverty status at the sub-county level to determine if there are populations more affected by poverty. In this table, it is clear the population in Indiantown CCD is more affected by poverty than the rest of the county. Fifteen percent of the population in Indiantown CCD live in poverty, which is 5% more than the county. Fourteen percent of the population ages 18-64 years in Indiantown CCD were living in poverty. Fifteen percent of the female population and 15% of the male population were living in poverty in the Indiantown CCD.

Poverty status in 2018 among grandparents living with their own grandchildren under 18 years old is shown for each Martin County CCD in the table below. Across all CCDs, Indiantown had the highest percentage (12.4%) of grandparents living with their grandchildren with an income below the poverty level, compared to Port Salerno-Hobe Sound CCD (.5%) and Stuart CCD (9.4%). However, Stuart had the highest percentage of grandparents below poverty who were responsible for their grandchild (5%), compared to Indiantown CCD (4.2%) and Port-Salerno Hobe Sound CCD (0%).

Table 22: Poverty Status in the Past 12 Months of Grandparents Living With Own Grandchildren Under 18 Years by Responsibility for Own Grandchildren and Age of Grandparent, Census County Divisions in Martin County, 2018

	Indiantown CCD		Port Salerno-Hobe Sound CCD		Stuart CCD

INCOME

Income is associated with morbidity and mortality rates.¹⁰ Those with a higher income may be able to afford health insurance and health care and can potentially spend more on healthy foods such as fruits and vegetables, which can also play a significant role in health outcomes.

Per capita income is the average income computed for every man, woman, and child in a particular group.⁴

This table shows per capita income and earnings in Martin County and Florida in 2019. Martin County's per capita income in 2019 was \$42,199, which was higher than the state. The median earnings for workers in the county (\$32,161) was also higher than the state (\$31,243). The difference in median earnings for male full-time, year-round workers versus females in Martin County (\$6,891) was slightly higher than the state (\$6,391).

Table 23: Per Capita Income and Earnings, Martin County and Florida, 2019

	Martin County	Florida
Per capita income (dollars)	\$42,199	\$31,619
Median earnings for workers (dollars)	\$32,161	\$31,243
Median earnings for male full-time, year-round workers (dollars)	\$50,809	\$44,724
Median earnings for female full-time, year-round workers (dollars)	\$43,918	\$38,333

As mentioned above, income can be linked to health outcomes. The table below shows household income and benefits in Martin County and Florida in 2018. Households in the county had a higher median and mean income than those in the state. Half of the households in the county receive Social Security income, which is more than 10% higher than the state. Over a quarter of households in the county receive retirement income, which is also more than 5% higher than the state. Almost 2% of households in the county received cash public assistance and nearly 7% received food stamps/SNAP.

The Gini Index is a summary measure of income inequality. The Gini coefficient ranges from 0, indicating perfect equality (where everyone receives an equal share), to 1, perfect inequality (where only one recipient or group of recipients receives all the income).⁴

The table below shows the Gini Index for Florida, Martin County, and surrounding counties in 2018. The Gini Index in Martin County at 0.5273, was higher than the state. The index for Martin County indicates there is some inequity with regard to income disparity.

Table 26: Gini Index, Martin County and Florida, 2018

	Gini Index
Florida	0.4868
Martin County	0.5273
Surrounding Counties:	
Glades County	0.4324
Hendry County	0.4736
Okeechobee County	0.4429
Palm Beach County	0.5221
St. Lucie County	0.4475

ALICE refers to the population in a community who are Asset Limited, Income Constrained, and Employed. The ALICE population represents those who are working whose salaries do not match Martin County's cost of living.¹¹

The table below shows the percent of ALICE and Poverty households in Martin County and its three Census County Divisions (CCD) in 2018. The percent of households that live in poverty and are ALICE was 37.9% in 2018. Within the three CCDs 40.6% of households in the Indiantown CCD, 41.4% of households in Port Salerno-Hobe Sound CCD and 40.5% of households in Stuart CCD were ALICE or living in poverty.

Table 27: ALICE Population, Martin County, 2018

	Total Households	% ALICE and Poverty
Martin County	62,976	37.9%
Indiantown CCD	6,177	40.6%
Port Salerno-Hobe Sound CCD	27,032	41.4%
Stuart CCD	29,771	40.5%

PUBLIC ASSISTANCE BENEFITS

Public assistance refers to assistance programs that provide either cash assistance or in-kind benefits to individuals and families from any governmental entity.¹² There are two major types of public assistance programs; social welfare programs and social insurance programs. Benefits received from social welfare programs are usually based on a low-income means-tested eligibility criteria. For this reason, presenting data on public assistance benefits may further illustrate the needs of low-income populations in Martin County.

This table shows students eligible for free and reduced lunch in Martin County and Florida in the school year 2016-17. Approximately 44% of students in Martin County were eligible for free and reduced lunch, which is 14% less than the state.

Table 28: Free and Reduced Lunch Status, Martin County and Florida, SY2016-2017

	Martin County	Florida
Total Students	19,026	2,816,813
Number Free/Reduced Price Lunch Eligible	8,427	1,633,226

WIC provides nutritious foods, nutrition education, breastfeeding support, and referrals to health care and social services to low-income families with nutritional risk.¹³ The percent of WIC eligibles served is the number served divided by the estimated number in need, expressed as a percentage.

The table below shows WIC eligibles served in Martin County and Florida between 2014 and 2018. Almost 71% of those eligible for WIC were served in Martin County in 2018, which was slightly higher than the state. There is a similar trend for other years as well.

Table 29: WIC Eligibles Served, Martin County and Florida, 2014-2018

Year	Martin County			Florida		
	Count	Denominator	Percent	Count	Denominator	Percent
2014	2,968	3,197	92.8%	489,383	587,787	83.3%

HOMELESS

Homeless populations are at an increased risk for acute and chronic illnesses.¹⁴ For this reason, it is important to understand the homeless population in Martin County when developing community health improvement strategies.

The table below shows the homeless population in Martin County in January 2020 and January 2021. In January 2021, there were 220 homeless adults and 46 homeless children for a total of 266 homeless individuals, which is much lower than the 381 total homeless individuals in January 2020.

Table 30: Homeless Population, Martin County, January 2020 and January 2021

	January 2020		January 2021	
	Count	Percent	Count	Percent
Adults	297	78.0%	220	82.7%
Children	84	22.0%	46	17.3%

EDUCATION

The table below shows school enrollment for the population three years and over enrolled in school in Martin County and Florida in 2018. This information provides some additional information as to the age distribution of individuals in the county and their education needs. Martin County has a higher percentage of the population in high school than the state but a lower population in college or graduate school than the state.

Table 31: School Enrollment, Martin County and Florida, 2018

	Martin County		Florida	
	Count	Percent	Count	Percent
Population 3 years and over enrolled in school	28,528	(X)	4,737,877	(X)

Education can increase a person’s life expectancy and that quality of life.¹⁵ This is because those with higher educational attainment have access to higher-paying jobs, which can increase their income level. As mentioned above, income is tied to a higher quality of life.

The table below shows the highest level of educational attainment by sex for the population 25 years and over in Martin County and Florida in 2018. This population in Martin County has a higher percentage of individuals with a high school graduate degree or higher (91% and 88% respectively) and a bachelor’s degree or higher than the state (33% and 29% respectively). In Martin County, more females than males had a high school graduate degree or higher, but fewer females than males had a bachelor’s degree or higher.

Table 32: Highest Level of Educational Attainment by Sex, Martin County and Florida, 2018

	Martin County			Florida		
	Total	Male	Female	Total	Male	Female
Population 25 years and over	121,310	59,213	62,097	14,686,727	7,047,844	7,638,883

Not completing high school is linked to limited employment prospects, low wages, and poverty, which all affect health status.¹⁶

This table shows the percent of high school graduates in Martin County and Florida for the years 2014-2018. Martin County consistently had a higher percentage of high school graduates than the state. In 2018, there was a high school graduate rate of nearly 88% in the county.

Table 33: Percent of High School Graduates, Martin County and Florida, 2014 - 2018

It is important to identify the performance of schools in the area to determine the quality of education students receive as this can influence their success later in life. Research shows that students' reading skill level by 3rd grade can affect their long-term academic achievement, including the likelihood they will graduate high school.¹⁴ The table below shows school grades by year in Martin County for the years 2015-2019. The 'C' schools include Hobe Sound Elementary School, J.D. Parker School of Technology, and Port Salerno Elementary School.

BUSINESS AND EMPLOYMENT

Not only does unemployment mean a loss of income, but it also means an individual may no longer have access to affordable health insurance. Additionally, laid-off workers are more likely than those continuously employed to have fair or poor health and develop stress-related conditions.¹⁷

The table below shows the population 16 years and over by employment status in Martin County and Florida in 2019. The unemployment rate in Martin County was 4.5%, which was slightly lower than the state at 5.6%.

Table 35: Employment Status, Martin County and Florida, 2019

HOUSING

Quality, stable, and affordable housing is foundational for health and economic security. The lack of affordable housing affects families' ability to meet other essential expenses, placing many under tremendous financial strain. High housing-related costs place a particular economic burden on low-income families, forcing trade-offs between food, heating and other basic needs.¹⁸

The table below shows occupied and vacant housing units in Martin County and Florida in 2018. In the county, 7% of housing units were occupied and 22% were vacant.

Table 39: Housing Occupancy, Martin County and Florida, 2018

	Martin County		Florida

TRANSPORTATION

Evidence supports that transportation barriers are an important barrier to healthcare access, particularly for those with lower incomes or the under/uninsured. This is significant because when patients cannot get to their health care provider, they miss the opportunity for evaluation and treatment of chronic illnesses, and as a result, may delay interventions that reduce or prevent disease complications. In addition, certain populations face unique circumstances that create transportation barriers, these populations include the elderly, children and veterans. This is important to keep in consideration since Martin County has a significant elderly and veteran population.¹⁹

The table below shows vehicles available in occupied housing units in Martin County and Florida in 2019. In the county, 5.2% of occupied housing units had no vehicles available, which was lower than the 6.3% of units with no vehicle available in the state overall.

Table 42: Vehicles Available in Occupied Housing Units, Martin County and Florida, 2019

	Martin County		Florida	
	Count	Percent	Count	Percent
Occupied housing units	64,528	100.0%	7,736,311	100.0%

CRIME

Crime and violence experienced by individuals living in a community is an important public health issue. Violence can lead to premature death or cause non-fatal injuries, and people who survive violent crimes may experience mental distress and reduced quality of life. In communities where violence frequently occurs, residents may be less likely to exercise and to use community resources like parks and playgrounds that would otherwise promote both healthy behaviors and social interaction. The communities most at risk of exposure to violence are those with socioeconomically disadvantaged populations, such as those living below the poverty level, experiencing unemployment or with low educational attainment.²⁰

This table shows arrests in Martin County by the arresting agency in 2018. The arrest rate per 100,000 population increased from 3,963 to 4,016 in 2018. The arrest rate from the Stuart Police Department was the highest of all agencies.

Table 43: Arrests by Agency, Rate Per 100,000 Population, Martin County, 2018

HEALTH STATUS

MATERNAL AND CHILD HEALTH

PRENATAL CARE ACCESS

Prenatal care is the health care women get when they are pregnant. Women who see a health care provider regularly during pregnancy have healthier babies and are less likely to have pregnancy complications.²¹ Mothers with unknown prenatal care are excluded from the denominator in calculating the percentage.

Prenatal care (PNC) visits provide benefits to both the mother and baby and are used to monitor the progress of a pregnancy. To achieve the greatest benefit for both the mother and baby, it is recommended that women begin PNC visits in the first trimester of pregnancy or as soon as pregnancy is suspected or confirmed. Early PNC allows health care providers to identify potential problems as early as possible so they can be prevented or treated before they become serious. Ensuring that all women receive early and adequate PNC is a top maternal and child health priority. Public health programs emphasize access to early PNC services for teens, women with less than high school education, and Black and Hispanic women.

The table below shows births to mothers with first-trimester prenatal care in Martin County and Florida from 2015 to 2019. The percentage of births in the county with first-trimester prenatal care has fluctuated but has remained consistently lower than the state. In 2019, almost 75% of births had first-trimester prenatal care, which was lower than the state.

Table 44: Births to Mothers With 1st Trimester Prenatal Care, Martin County and Florida, 2015-2019

Year	Martin County			Florida		
	Count	Denominator	Percent	Count	Denominator	Percent
2015	910	1,215	74.9%	161,643	203,862	79.3%

²¹ March of Dimes (2020). Prenatal care. Retrieved from <https://www.marchofdimes.org/pregnancy/prenatal-care.aspx#>

The graph below shows the percentage of births with first-trimester prenatal care in Martin County and Florida by race between 2015 and 2019. The percentage of births to mothers who identified as White and mothers who identified as Black and Other with first-trimester prenatal care in the county has been consistently lower than in the state. The trend for this indicator in the county has been fluctuated among both racial groups, and has been lower than the state. In 2019, 78% of births to mothers who identified as White and 63.2% of births to mothers who identified as Black and Other in the county had first-trimester prenatal care. This indicates there is also a racial disparity for this indicator within the county.

Figure 3: Percentage of Births to Mothers with 1st Trimester Prenatal Care by Mother's Race, Martin County and Florida, 2015-2019

Source: FloridaCHARTS, Florida Department of Health, Bureau of Vital Statistics, 2019
 Compiled by: Health Council of Southeast Florida, 2020

This figure shows the percentage of births to mothers with first-trimester prenatal care in Martin County and Florida by ethnicity between 2015 and 2019. The percentage of births with first-trimester prenatal care was 12.3% to 19.1% lower than in the state among mothers who identified as Hispanic in the county. Additionally, there is an ethnic disparity that exists for this indicator within the county, as Hispanic mothers had a consistently lower percentage of births with first-trimester prenatal care than non-Hispanic women. In 2019, only 63.8% of births to women who identified as Hispanic were births to mothers with first-trimester prenatal care compared to 80.4% among non-Hispanic women.

The table below shows births to mothers with third trimester or no prenatal care in Martin County and Florida between 2015 and 2019. In the county, the percentage of births to mothers with third trimester or no prenatal care has fluctuated, while it has continued to increase in the state. In 2019, 6.5% of births in the county were to mothers with third trimester or no prenatal care.

Table 45: Births to Mothers With 3rd Trimester or No Prenatal Care, Martin County and Florida, 2015-2019

Year	Martin County			Florida		
	Count	Denominator	Percent	Count	Denominator	Percent
2015	61	1,215	5.0%	11,127	203,862	5.5%
2016	70	1,210	5.8%	12,126	200,296	6.1%
2017	102	1,198	8.5%	13,784	199,076	6.9%
2018	71	1,194	5.9%	14,176	199,490	7.1%
2019	75	1,147	6.5%	14,824	197,866	7.5%

Source: FloridaCHARTS, Florida Department of Health, Bureau of Vital Statistics, 2019
 Compiled by: Health Council of Southeast Florida, 2020

This figure shows the percentage of births to mothers with third trimester or no prenatal care in Martin County and Florida by race between 2015 and 2019. The percentage of births to mothers who identified as Black and Other with third trimester or no prenatal care in the county was higher than the percentage of births to mothers who identified as White with third trimester or no prenatal care in the county. The prevalence for both racial groups within the county was similar to that of the state and the trend shows a fluctuation in these numbers. In 2019, 5.5% of births to mothers who identified as White in the county and 9.1% of births to mothers who identified as Black and Other in the county were births to mothers with third trimester or no prenatal care.

Figure 5: Percentage of Births to Mothers With 3rd Trimester or No Prenatal Care, by Race, Martin County and Florida 2015-2019

Source: FloridaCHARTS, Florida Department of Health, Bureau of Vital Statistics, 2019
 Compiled by: Health Council of Southeast Florida, 2020

This figure shows the percentage of births to mothers with third trimester or no prenatal care in Martin County and Florida by ethnicity between 2015 and 2019. In the county, the percentage of births to mothers with third trimester or no prenatal care among women who identified as Hispanic has fluctuated during this timeframe, and was higher than the state from 2016 to 2018. Additionally, there is an ethnic disparity that exists within the county as Hispanic women typically have higher prevalence of third trimester or no prenatal care compared to non-Hispanic women. In 2019, 6.7% of births to mothers who identified as Hispanic has third trimester or no prenatal care compared to 6.4% of non-Hispanic mothers.

Figure 6: Percentage of Births to Mothers With 3rd Trimester or No Prenatal Care, by Ethnicity, Martin County and Florida 2015-2019

 Compiled by: Health Council of Southeast Florida, 2020

The Kotelchuck Index also called the Adequacy of Prenatal Care Utilization (APNCU) Index, classifies the adequacy of initiation as follows: pregnancy months 1 and 2, months 3 and 4, months 5 and 6, and months 7 to 9. A ratio of observed visits to expected visits is calculated and grouped into four categories: Inadequate (received less than 50% of expected visits), Intermediate (received 50%-79% of expected visits), Adequate (received 80%-109% of expected visits), and Adequate Plus (received 110% or more of expected visits). Mothers with unknown prenatal care are excluded from the denominator in calculating the percentage.²²

This indicator is a measure of the adequacy of prenatal care provided to a woman by health care providers during the prenatal period. The adequacy of prenatal care utilization index provides a more comprehensive measure of prenatal care utilization than the timing of prenatal care. High-risk pregnant women are likely to have high rates for adequate plus care due to the many visits they receive.

The table below shows births to mothers with adequate prenatal care per the Kotelchuck Index in Martin County and Florida between 2015 and 2019. The percentage of births to mothers with adequate prenatal care in the county has fluctuated over the years shown and in 2019, 73.4% of births in the county were to mothers with adequate prenatal care, which was higher than the state but below the Healthy People 2030 target of 80.5% of pregnant females receiving early and adequate prenatal care.

Table 46: Births to Mothers with Adequate Prenatal Care (Kotelchuck Index), Martin County and Florida, 2015-2019

Year	Martin County			Florida		
	Count	Denominator	Percent	Count	Denominator	Percent
2015	892	1,213	73.5%	142,913	202,754	70.5%

Healthy People 2030 Target
80.5% receiving early and adequate prenatal care

²² Kotelchuck M. (1994). The Adequacy of Prenatal Care Utilization Index: its US distribution and association with low birthweight. American journal of public health, 84(9), 1486–1489. <https://doi.org/10.2105/ajph.84.9.1486>

The figure below shows the percentage of births to mothers with adequate prenatal care in Martin County and Florida by the mother's race between 2015 and 2019. During this timeframe, there was a fluctuating trend for both racial groups in the county. There is a disparity that exists within the county, as the percentage of births to mothers with adequate prenatal care is higher among women who identified as White than women who identified as Black & Other. In 2019, there was a 16% disparity between the percentages of births with adequate prenatal care among mothers who identified as White (77%) compared to mothers who identified as Black & Other (61%).

Figure 7: Percentage of Births to Mothers with Adequate Prenatal Care (Kotelchuck index) by Mother's Race, Martin County and Florida, 2015-2019

Source: FloridaCHARTS, Florida Department of Health, Bureau of Vital Statistics, 2019
 Compiled by: Health Council of Southeast Florida, 2020

This figure shows the percentage of births to mothers with adequate prenatal care in Martin County and Florida by mother’s ethnicity between 2015 and 2019. The percentage of births to mothers with adequate prenatal care in the county among Hispanic mothers has been lower than in non-Hispanic mothers. In 2019, this disparity was 11%, with Hispanic women having 67% of their births with adequate prenatal care and non-Hispanic women with 77% of their births with adequate prenatal care. Additionally, the percentage of births to mothers with adequate prenatal care among Hispanic women in the county was lower than the state. However, the trend seems to be mostly increasing for Hispanic women in the county.

Figure 8: Percentage of Births to Mothers with Adequate Prenatal Care (Kotelchuck index) by Mother’s Ethnicity, Martin County and Florida, 2015-2019

Source: FloridaCHARTS, Florida Department of Health, Bureau of Vital Statistics, 2019
 Compiled by: Health Council of Southeast Florida, 2020

The table below shows births to mothers with less than adequate prenatal care in Martin County and Florida between 2015 and 2019. This indicator was mostly lower in the county than in the state and showed a fluctuation in the county. In 2019, over a quarter of births were to mothers with less than adequate prenatal care in the county, which was lower than the state (29.6%)

Table 47: Births to Mothers with Less Than Adequate Prenatal Care (Kotelchuck Index), Martin County and Florida, 2015-2019

Year	Martin County			Florida		
	Count	Denominator	Percent	Count	Denominator	Percent
2015	321	1,213	26.5%	59,841	202,754	29.5%
2016	352	1,208	29.1%	59,436	198,869	29.9%

 Compiled by: Health Council of Southeast Florida, 2020

The chart below shows the percentage of births to mothers with less than adequate prenatal care in Martin County and Florida by the mother's race between 2014 and 2019. The rates were mostly lower in the county than in the state but in 2019 the percent of those who identified as Black & Other jumped from 29% in 2018 to 39%. This shows a disparity that exists within the county. Mothers who identified as Black & Other had higher rates of less than adequate prenatal care. The trends in the county show a fluctuation in these numbers but in 2019 the percentages stayed relatively the same than those of 2018 with the exception of those who identified as Black & Other in Martin County in 2019, which experienced an increase.

Figure 9: Percentage of Births to Mothers with Less Than Adequate Prenatal Care (Kotelchuck index) by Mother's Race, Martin County and Florida, 2015-2019

Source: FloridaCHARTS, Florida Department of Health, Bureau of Vital Statistics, 2019
 Compiled by: Health Council of Southeast Florida, 2020

The figure below shows the percentage of births to mothers with less than adequate prenatal care in Martin County and Florida by the mother's ethnicity between 2014 and 2019. The rates among Hispanic women in the county have been consistently higher than in the state but show a decreasing trend with the exception of about a 2% increase from 2018 to 2019. There is a disparity that exists within the county, as Hispanic women have higher rates of births with less than adequate prenatal care than non-Hispanic women. In 2019, these rates were 33% and 23%, respectively.

PRETERM BIRTHS

Reaching 37 weeks of gestational age is a measure of success in achieving a full-term pregnancy. Births that occur before 37 weeks gestation (preterm births) have lower chances of survival and higher chances of short- and long-term health problems when compared to term births.²³

This table shows preterm births in Martin County and Florida between 2014 and 2019. The percentage of preterm births in the county has been consistently lower than in the state but shows a fluctuating trend. In 2019, 9% of births in the county were preterm.

Table 48: Preterm Births (<37 weeks gestation), Martin County and Florida, 2015-2019

Year	Martin County			Florida		
	Count	Denominator	Percent	Count	Denominator	Percent
2015	86	1,262	6.8%	22,396	224,273	10.0%

Healthy People 2030 Target
9.4% of births are pre-term

²³ National Institutes of Health (n.d.). Premature babies. Retrieved from <https://medlineplus.gov/prematurebabies.html>

The figure below shows the percentage of preterm births in Martin County and Florida by the mother's race between 2015 and 2019. The preterm birth rates for both racial groups in the county have been consistently lower than the state. However, there is a racial disparity within the county, as the percentage of preterm births among babies who are Black & Other has been consistently higher than among babies who are White. Yet the gap did decrease from 2018 to 2019 as there was an almost 3% decrease amongst those who identified as Black & Other in Martin County. The trend of preterm births among White babies in the county has fluctuated in the county whereas it has largely remained consistent in the state.

The chart below shows the percentage of preterm births in Martin County and Florida by the mother’s ethnicity between 2015 and 2019. The percentage of preterm births among Hispanic women in the county was mostly lower than the state. The trend also shows a fluctuation in rates of preterm births among Hispanic women in the county. Interestingly, there is a disparity in the state as the percentage of preterm births among Non-Hispanic women has been consistently higher than their Hispanic counterparts. In 2019, Hispanic women had a preterm birth rate of 8.4%, which was lower than the rate for non-Hispanic women (8.7%).

The figure below shows the birth rate per 1,000 population in Martin County and Florida by the mother's race between 2015 and 2019. The birth rate among both racial groups in the county has been mostly lower than in the state. Mother's identifying as Black & Other have had a higher birth rate than mothers identifying as White in the county. The trend of births to White babies in the county has been mostly consistent while it has been increasing for birth to Black babies since 2015 although there was a slight decrease from 2018 to 2019. In 2019, the birth rate among these groups was 14 per 1,000 and 9 per 1,000, respectively.

The figure below shows the birth rate per 1,000 population in Martin County and Florida by the mother's ethnicity between 2015 and 2019. The birth rate for Hispanic women in the county has been higher than in the state. Additionally, the birth rate for Hispanic women in the county has been considerably higher than among non-Hispanic women. In 2019, these rates were 18 per 1,000 and 6 per 1,000, respectively, a rate for the Hispanic population that is three times that of their non-Hispanic counterpart.

TEENAGE BIRTHS

Teen pregnancy is a critical public health issue that affects the health, educational, social and economic future of the mother and child.²⁴ Teen pregnancy is closely linked to a host of other critical social issues as well: welfare dependency, out-of-wedlock births, responsible fatherhood, and workforce development in particular. Adolescents are less likely to seek out prenatal care because they are afraid or embarrassed. This phenomenon and the immature physical nature of the adolescent body results in higher rates of low birth weight babies than in other age groups. As the offspring of adolescent mothers grow, they are more apt than children born to older women to have health and cognitive problems and to be the victims of neglect or abuse.

This table shows births to mothers ages 17 years and younger in Martin County and Florida between 2015 and 2019.

Table 53: Births to Mothers Ages 17 Years and Younger, Martin County and Florida, 2015-2019

Year	Martin County			Florida		
	Count	Denominator	Rate	Count	Denominator	Rate

Having more than one child as a teen can limit the teen mother’s ability to finish her education or get a job. Infants born from a repeat teen birth are often born too small or too soon, which can lead to more health problems for the baby.²⁵ The table below shows repeat births to mothers ages 15-17 in Martin County and Florida between 2015 and 2019. The percentage in the county has been consistently lower than in the state. The trend in the county has fluctuated. In 2018 and 2019, there were no repeat births to mothers ages 15-17 in the county.

Table 56: Repeat Births to Mothers Ages 15-17, Martin County and Florida, 2015-2019

Year	Martin County			Florida

BIRTH WEIGHT

Low-birthweight babies are more likely than babies with normal weight to have health problems as a newborn and may be more likely than babies born at a normal weight to have certain health conditions later in life.²⁶ Some of these conditions include diabetes, heart disease, high blood pressure, intellectual and development disability, metabolic syndrome, and obesity.

FETAL AND INFANT MORTALITY

Fetal death, fetal mortality, or stillbirth is the death of a fetus after 20 weeks of gestation.²⁷ It results in a baby born without signs of life. The term is in contrast to miscarriage (less than 20 weeks of gestation) and live birth (where the baby is born alive, even if it dies shortly after birth). The fetal death rate is the number of fetal deaths per 1,000 live births plus fetal deaths. Fetal and infant mortality reflect the health and well-being of the population's women of reproductive age and their infants as well as the quality of the health care available.

The table below shows the fetal death rate per 1,000 deliveries in Martin County and Florida between 2015 and 2019. The fetal death rate in the county has fluctuated in the years shown but has remained below the state. The trend has been fairly consistent in the state. In 2019, the fetal death rate in Martin County was 3.3 per 1,000 deliveries. This rate was lower than it was in 2018 while the rate for the state slightly increased from 2018 to 2019.

Healthy People 2030 Target
5.0 infant deaths per 1,000 live births

Table 60: Fetal Deaths, Rate Per 1,000 Deliveries, Martin County and Florida, 2015-2019

²⁷ Centers for Disease Control and Prevention (2020). Fetal and infant deaths. Retrieved from https://www.cdc.gov/nchs/nvss/fetal_death.htm

This figure shows the fetal death rate per 1,000 deliveries in Martin County and Florida by the mother's race between 2015 and 2019. The fetal death rate among White babies delivered in Martin County was higher than the state in 2016 and 2018. The fetal death rate among Black babies delivered in the county has been mostly lower than the state. In 2015 and 2017, the fetal death rate among Black babies delivered was higher in the county than White babies. In 2019 the rate of women who identified as Black & Other in Martin County was 0. This is lower in comparison with the state rate, which saw a slight increase in its fetal death rate from 2018 to 2019.

Figure 23: Fetal Deaths, Rate Per 1,000 Deliveries, by Race, Martin County and Florida, 2015-2019

The figure below shows the fetal death rate per 1,000 deliveries among babies in Martin County and Florida by ethnicity between 2015 and 2019. Hispanic babies delivered in the county had mostly lower fetal death rates than non-Hispanic babies delivered in the county and were lower than the rates for the state from 2016 to 2019. The fetal death rate for Hispanic babies delivered in 2019 was 4.9 per 1,000 deliveries, down from the rate of 5.1 in 2018. The aforementioned trend is in contrast to the increasing trend of fetal deaths among Hispanic babies in the county from 2016 to 2018.

Infant mortality is the death of a live-born baby during the first year of life. The rate is the number of infant deaths per 1,000 live births. Fetal and infant mortality reflect the health and well-being of the population's women of reproductive age and their infants as well as the quality of the health care available.

This table shows the infant mortality rate per 1,000 live births in Martin County and Florida between 2015 and 2019. The infant mortality rate in the county was higher than the state in 2014 and 2016 but had been decreasing since 2016. In 2018, the infant mortality rate in Martin County was 4 per 1,000 live births. In 2019, the rate increased by one but is still below the previous highest rate of 5.5 infant mortalities per 1,000 in 2017.

Table 61: Infant Mortality, Rate Per 1,000 Live Births, Martin County and Florida, 2015-2019

Year	Martin County			Florida		
	Count	Denominator	Rate	Count	Denominator	Rate

The figure below shows the infant death rate per 1,000 live births in Martin County and Florida by the mother's race between 2015 and 2019. The infant death rate among Black babies in the county has been decreasing since 2016 and in 2017 and 2018, the infant death rate was zero. The infant death rate among White babies in the county has been decreasing since 2016. The infant death rate among White babies in the county has been higher than the state since 2016 but dropped below the state rate in 2019. In 2019, the infant death rate among White babies in the county was 4 per 1,000 live births.

BIRTHS TO OVERWEIGHT MOTHERS AT TIME PREGNANCY OCCURRED

Women who are overweight or obese while pregnant are more likely to have premature births, babies with birth defects like neural tube defects, or babies who are large for gestational age.²⁸ These women are more likely to have complications during labor and birth, and their babies are at a higher risk of developing heart disease, diabetes, and obesity later in life.

This table shows births to overweight mothers at the time pregnancy occurred in Martin County and Florida between 2015 and 2019. The percentage of births to overweight mothers in the county is similar to the state and has remained around 25% in the years shown.

Table 62: Births to Overweight Mothers at time Pregnancy Occurred, Martin County and Florida, 2015-2019

Year	Martin County			Florida		
	Count	Denominator	Percent	Count	Denominator	Percent
2015	346	1,244	27.8%	55,049	211,250	26.1%
2016	302	1,247	24.2%	55,478	211,314	26.3%
2017	321	1,239	25.9%	55,459	209,213	26.5%

BREASTFEEDING

Breastfeeding provides unmatched health benefits for babies and mothers.²⁹ It is the clinical gold standard for infant feeding and nutrition, with breast milk uniquely tailored to meet the health needs of a growing baby.

The table below shows mothers who initiate breastfeeding in Martin County and Florida between 2015 and 2019. The percentage of mothers who initiate breastfeeding in the county has fluctuated over the years shown. In 2019 the percentage decreased in Martin County as well as the state. The percentage of 86% is higher than it's been since 2015 but the rate in 2019 is lower than the rate at the state level.

Table 64: Mothers Who Initiate Breastfeeding, Martin County and Florida, 2015-2019

Year	Martin County			Florida		
	Count	Denominator	Percent	Count	Denominator	Percent
2015	1,083	1,262	85.8%	191,057	224,273	85.2%
2016	1,080	1,273	84.8%	193,508	225,018	86.0%
2017	1,060	1,272	83.3%	192,199	223,579	86.0%

Healthy People 2030 Target

42.4 percent of infants breastfed exclusively through 6 months of age

This figure below shows the percentage of mothers who initiate breastfeeding in Martin County and Florida by the mother's race between 2015 and 2018. The percentage of White mothers in the county who initiated breastfeeding has been similar to their counterparts in the state for the years shown. The percentage of Black mothers in the county who initiated breastfeeding was lower than their counterparts in the state until 2018. In recent years, the percentage of White mothers in the county who initiated breastfeeding has stayed consistent, while for Black mothers, it has been increasing. White mothers in the county consistently had higher percentages of mothers who initiated breastfeeding than Black mothers in the county. In 2018, these percentages were 89% and 85%, respectively.

ORAL HEALTH

Oral health affects our ability to eat, speak, smile, and show emotions. Oral health also affects a person’s self-esteem, school performance, and attendance at work or school.³¹ Oral diseases—which range from cavities and gum disease to oral cancer—cause pain and disability for millions of Americans and cost taxpayers billions of dollars each year.

This table shows preventable hospitalizations under 65 from dental conditions in Martin County and Florida between 2015 and 2019. The rate in the county had an increasing trend from 2015 to 2018, and was higher than the rate in the state from 2015 to 2018. In 2019, the rate for the county decreased to 10.1 per 100,000 population.

BEHAVIORAL HEALTH

ALCOHOL CONSUMPTION AND SUBSTANCE USE

Excessive alcohol use has immediate effects that increase the risk of many harmful health conditions.³² These are most often the result of binge drinking and include injuries such as motor vehicle crashes, falls, drownings, and burns; violence, including homicide, suicide, sexual assault, and intimate partner violence; alcohol poisoning; and risky sexual behaviors, including unprotected sex or sex with multiple partners, which can result in unintended pregnancy or sexually transmitted diseases, including HIV. Over time, excessive alcohol use can lead to the development of chronic diseases and other serious problems including high blood pressure, heart disease, stroke, liver disease, and digestive problems; cancer of the breast, mouth, throat, esophagus, liver, and colon; weakening of the immune system, increasing the chances of getting sick; learning and memory problems, including dementia and poor school performance; mental health problems, including depression and anxiety; and social problems, including lost productivity, family problems, and unemployment.

Smoking causes cancer, heart disease, stroke, lung diseases, diabetes, and chronic obstructive pulmonary disease (COPD), which includes emphysema and chronic bronchitis. Smoking also increases the risk of tuberculosis, certain eye diseases, and problems of the immune system, including rheumatoid arthritis. Secondhand smoke causes stroke, lung cancer, and coronary heart disease in adults. Children who are exposed to secondhand smoke are at increased risk for sudden infant death syndrome, acute respiratory infections, middle ear disease, more severe asthma, respiratory symptoms, and slowed lung growth.

The table below shows the percentage of adults who are current smokers in Martin County and Florida in 2010, 2013 and 2016. This percentage fluctuated in the county but remained below the state. In 2016, 10% of adults in Martin County were current smokers.

MENTAL HEALTH

Mental and physical health are equally important components of overall health. Mental illness, especially depression, increases the risk for many types of physical health problems, particularly long-lasting conditions like stroke, type 2 diabetes, and heart disease. Similarly, the presence of chronic conditions can increase the risk of mental illness.³³

The table below shows the percentage of adults with good mental health in Martin County and Florida in 2010, 2013 and 2016. The percentage of this in the county has fluctuated but remained slightly higher than the state. In 2016, 87% of adults in the county reported good mental health.

The figure below shows the suicide age-adjusted death rate per 100,000 population in Martin County and Florida by race between 2016 and 2020. Since 2016, the rate among the White population has mostly decreased, but was higher than the state rate for the White population in 2016, 2018 and 2019. The rate among Black & Other residents has also decreased during this timeframe, and was higher than the state rate from 2015 to 2017, but lower from 2018 to 2020. In both Martin County and Florida, White residents have experienced consistently higher rates. It is important to note that because in some cases the count is less than five, it is not reliable to compare rates as they may be unstable.

MORBIDITY

HEART DISEASE

Heart disease is a catch-all phrase for a variety of conditions that affect the heart's structure and function. Coronary heart disease is a type of heart disease that develops when the arteries of the heart cannot deliver enough oxygen-rich blood to the heart.³⁴

The table below shows age-adjusted hospitalizations from coronary heart disease in Martin County and Florida between 2015 and 2019. The rate in the county has fluctuated during this timeframe, but has remained consistently lower than the state. In 2020, the rate was 176.8 per 100,000.

Table 95: Age-adjusted Hospitalizations from Coronary Heart Disease, Rate Per 100,000 Population, Martin County and Florida, 2016-2020

Year	Martin County		Florida	
	Count	Rate	Count	Rate
2016	650	221.9	82,727	297.0
2017	651	228.3	82,047	286.6
2018	655	216.8	80,402	273.9
2019	648	203.6	82,677	274.1
2020	551	176.8	73,308	236.8

Data note: Hospitalization data before October 2015 uses ICD-9-CM; starting in October 2015, hospitalization data use ICD-10-CM. Consequently, increases or decreases starting in 2015 may not be due to changes in disease trends but due to changes in coding.

³⁴ National Heart, Lung, and Blood (n.d.). Coronary Heart Disease. Retrieved May 16, 2020, from <https://www.nhlbi.nih.gov/health-topics/coronary-heart-disease>

This figure shows the age-adjusted hospitalizations from coronary heart disease rate per 100,000 population in Martin County and Florida by race between 2016 and 2020. The rate among the White population a has decreased from 210.8 per 100,000 in 2016 to 164.0 per 100,000 in 2020, and remained consistently lower than the state rate. Among the Black & Other population in the county, the rate has fluctuated, and was mostly lower than the state rate. There is a clear disparity within the county, the rate among the Black population has been considerably higher than among the White population. In 2020, these rates were 320.9 and 164.0 per 100,000, respectively.

DIABETES

Diabetes is a disease that occurs when your blood glucose, also called blood sugar, is too high. The most common types of diabetes are type 1 (diabetes insipidus), type 2 (diabetes mellitus) and gestational diabetes. Type 1, or diabetes insipidus occurs when the immune system attacks and destroys the cells in your pancreas that make insulin. Type 2, or diabetes mellitus is when the body does not make or use insulin well. Gestational diabetes develops in some women when they are pregnant, but this type of diabetes often goes away after the baby is born. Of all these types of diabetes, type 2 is the most common. Persons age 45 or older who have a family history of diabetes or are overweight are at a higher risk of type 2 diabetes.

This table shows age-adjusted hospitals from or with diabetes in Martin County and Florida between 2016 and 2020. In the county, these rates have increased from 2016 to 2017 and then declined, and have remained below the state. In 2020, the rate in the county was 1,348.2 per 100,000 population.

Table 99: Age-adjusted Hospitalizations from Or with Diabetes, Rate Per 100,000 Population, Martin County and Florida, 2016-2020

Year	Martin County		Florida	
	Count	Rate	Count	Rate
2016	4,165	1,490.5	632,161	2,344.5
2017	4,333	1,572.6	648,827	2,338.9
2018	4,170	1,450.2	658,129	2,310.2
2019	4,223	1,394.8	677,859	2,314.2
2020	4,112	1,348.2	648,464	2160.3

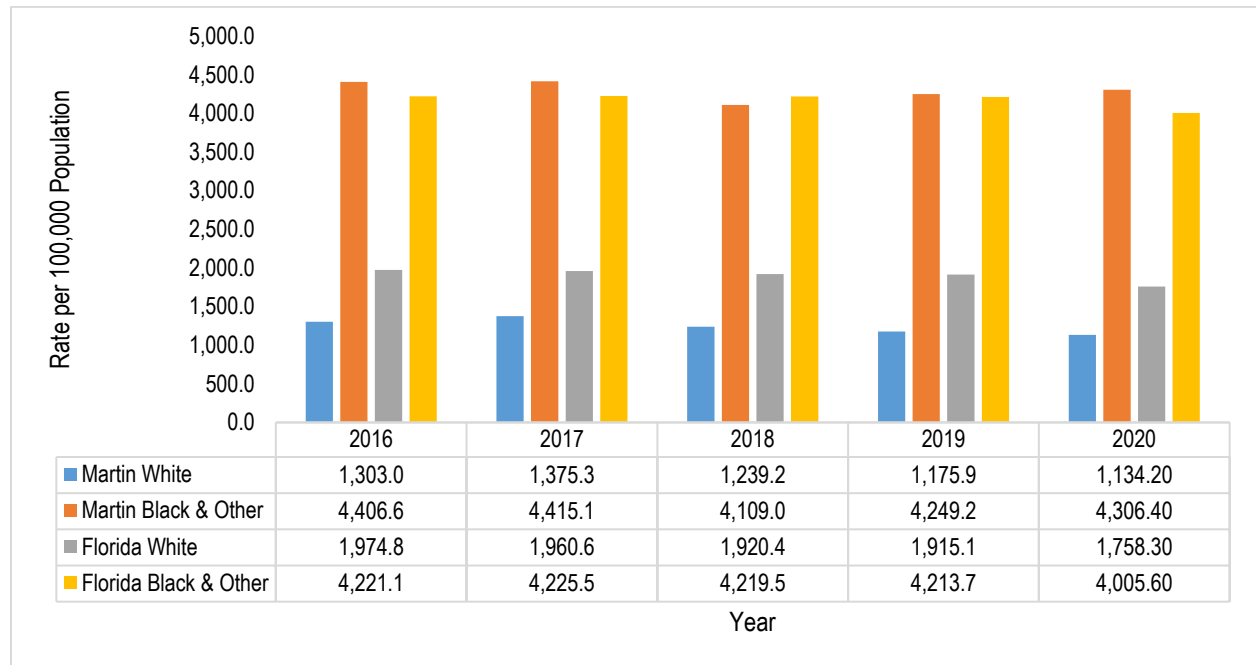

Data note: Hospitalization data before October 2015 use ICD-9-CM; starting in October 2015, hospitalization data use ICD-10-CM. Consequently increases or decreases starting in 2015 may not be due to changes in disease trends but due to changes in coding.

The figure below shows age-adjusted hospitalizations from or with diabetes rate per 100,000 population in Martin County and Florida by race between 2016 and 2020. For the White population in the county, this rate has fluctuated but has remained below the state. The Black & Other population rate has also fluctuated, and was higher than the state in 2019 and 2020. There is a disparity within the county as the rates among the Black population has been consistently double that of the White population. In 2020, the rates were 4,306.4 and 1,134.2 per 100,000 respectively.

This figure shows age-adjusted hospitalizations from or with diabetes rate per 100,000 population in Martin County and Florida by ethnicity between 2016 and 2020. The rate among the Hispanic population has fluctuated over the years shown but remained below the state. There is a disparity that exists in the county as Hispanics have consistently had a higher rate of hospitalizations from or with diabetes than non-Hispanics. In 2020, these rates were 1,889.5 and 1,284.8 per 100,000 respectively.

Figure 38: Age-adjusted Hospitalizations from Or with Diabetes, Rate Per 100,000 Population, by Ethnicity, Martin County and Florida, 2016-2020

Data note: Hospitalization data before October 2015 uses ICD-9-CM; starting in October 2015, hospitalization data use ICD-10-CM. Consequently, increases or decreases starting in 2015 may not be due to changes in disease trends but due to changes in coding.

STROKE

A stroke happens when blood flow to the brain is blocked, which prevents the brain from getting oxygen and nutrients from the blood. A stroke can also be caused by damage to brain cells from sudden bleeding in the brain.³⁵

The table below shows age-adjusted hospitalizations from a stroke in Martin County and Florida between 2015 and 2019. The rate in the county has fluctuated but has remained below the state. In 2019, the rate in the county was 213.7 per 100,000 population.

Table 103: Age-adjusted Hospitalizations from Stroke, Rate Per 100,000 Population, Martin County and Florida, 2015-2019

Year	Martin County		Florida	
	Count	Rate	Count	Rate
2015	642	213.7	67,046	244.0

RESPIRATORY DISEASE

Chronic lower respiratory diseases include chronic bronchitis, emphysema, chronic obstructive pulmonary disease, asthma, bronchiectasis, and acute bronchiolitis. Because of the cost to the health care system, the burden of respiratory diseases also falls on society; it is paid for with tax dollars, higher health insurance rates, and lost productivity. Annual health care expenditures for asthma alone are estimated at \$20.7 billion.³⁶

The table below shows age-adjusted hospitalizations from chronic lower respiratory disease (including asthma) in Martin County and Florida between 2015 and 2019. The rate in the county has an upward trend and continues to be higher than the state rate since 2017.

Table 105: Age-adjusted Hospitalizations from Chronic Lower Respiratory Disease. (including asthma), Rate Per 100,000 Population, Martin County and Florida, 2015-2019

Year	Martin County		Florida	
	Count	Rate	Count	Rate

This figure shows the age-adjusted rate per 100,000 population of hospitalizations from chronic lower respiratory disease (including asthma) in Martin County and Florida by race between 2015 and 2019. Among the White and Black population in the county, this rate has increased for the White population and slightly decreased for the Black & Other population. The rate among the Black population in the county was considerably higher than the state in 2015-2019. In 2019, this difference was a rate of 198 per 100,000 population. Within the county, there is a disparity that exists with the Black population having a much higher rate than the White population, in most years it was two times higher, which continued into 2019. In 2019, the rate for the Black population was 546.1 per 100,000 as compared to 275.5 per 100,000 for the White population.

COPD is a preventable and treatable disease characterized by airflow limitation that is not fully reversible. The airflow limitation is usually progressive and associated with an abnormal inflammatory response of the lungs to noxious particles or gases (typically from exposure to cigarette smoke).³⁵

The table below shows the percentage of adults who have ever been told they had chronic obstructive pulmonary disease (COPD), emphysema or chronic bronchitis in Martin County and Florida in 2013 and 2016. This percentage remained relatively the same in the county, which was slightly higher than the state. In 2016, almost 9% of adults in the county had ever been told they had COPD, emphysema, or chronic bronchitis.

This figure shows age-adjusted emergency room visits due to asthma rate per 100,000 population in Martin County and Florida by race between 2015 to 2019. These rates have fluctuated for both racial groups in the county. However, there is a disparity within the county as the Black & Other population has had consistently higher rates than the White population. In 2019, this disparity was nearly six times as much (147.4 per 100,000 for the White population and 890.8 per 100,000 for the Black & Other population.) The rate among the White population in the county has been consistently lower than in the state and the Black population in the county has been mostly lower than the state.

Figure 47: Age-adjusted Emergency Room Visits Due to Asthma, Rate Per 100,000 Population, by Race, Martin County and Florida, 2015-2019

Data note: Hospitalization data before October 2015 uses ICD-9-CM; starting in October 2015, hospitalization data use ICD-10-CM. Consequently, increases or decreases starting in 2015 may not be due to changes in disease trends but due to changes in coding.

The figure below shows emergency room visits due to asthma rate per 100,000 population in Martin County and Florida by ethnicity between 2015 and 2019. The rate among the Hispanic population in the county has fluctuated but remained below the state. There is a disparity within the county as Hispanics have had consistently higher rates than non-Hispanics. In 2019, the rates were 358.7 and 253.6 per 100,000 population, respectively.

CANCER

Cancer, also called malignant neoplasm, is a class of diseases in which a cell or a group of cells display uncontrolled growth (division beyond the normal limits), invasion (intrusion on and destruction of adjacent tissues) and sometimes metastasis (spread to other locations in the body). Complex and interrelated factors contribute to the risk of developing cancer and to the observed disparities in cancer incidence and death among racial, ethnic, and underserved groups. The most obvious factors are a lack of health care coverage and low socioeconomic status.³⁷

The table below shows age-adjusted cancer incidence in Martin County and Florida between 2013 and 2017. The rate in the county has remained relatively the same in the years presented and was slightly higher than the state from 2015 to 2017. In 2017, the cancer incidence rate in the county was 455.4 per 100,000 population.

Table 109: Age-adjusted Cancer Incidence, Rate Per 100,000 Population, Martin County and Florida, 2013-2017

Year	Martin County		Florida	
	Count	Rate	Count	Rate
2013	1,122	424.5	108,829	427.2
2014	1,201	462.8	110,602	427.2

ALZHEIMER'S DISEASE

Dementia is the loss of cognitive functioning—thinking, remembering, and reasoning—to such an extent that it interferes with a person's daily life. Dementia is not a disease itself, but rather a set of symptoms. Memory loss is a common symptom of dementia, although memory loss by itself does not mean a person has dementia. Alzheimer's disease is the most common form of dementia, accounting for the majority of all diagnosed cases. The estimated total cost for health care, long-term care, and hospice for persons with Alzheimer's disease and other dementias is estimated to be \$236 billion for 2016. Older adults with dementia are three times more likely to have preventable hospitalizations.

This table shows probable Alzheimer's cases in Martin County and Florida between 2014 and 2018. The percentage in the county has remained consistent in the years shown and has been slightly higher than the state. In 2018, almost 15% of the population 65 and older in the county had probable Alzheimer's.

Table 115: Probable Alzheimer's Cases (65+), Martin County and Florida, 2014-2018

HIV

HIV (Human Immunodeficiency Virus) is a virus that attacks cells that help the body fight infection, making a person more vulnerable to other infections and diseases. It is spread by contact with certain bodily fluids of a person with HIV, most commonly during unprotected sex (sex without a condom or HIV medicine to prevent or treat HIV), or through sharing injection drug equipment. If left untreated, HIV can lead to the disease AIDS (Acquired Immunodeficiency Syndrome).⁴⁰

The table below shows new HIV cases in Martin County and Florida from 2015 to 2019. The rate in the county has fluctuated during this timeframe but remained below the state. In 2019, the rate in the county was 8.9 per 100,000 population.

The figure below shows the HIV case rate per 100,000 population in Martin County and Florida by race between 2015 and 2019. The rate in the county among the non-Hispanic White population has doubled from 3.3 per 100,000 in 2015 to 6.0 per 100,000 in 2019. The rate among the non-Hispanic Black population has fluctuated during this timeframe, which a significant increase from 25.7 per 100,000 in 2016 and 76.0 per 100,000 in 2017. In 2019 the rate among the non-Hispanic Black population in the county was 48.5 per 100,000 which was lower than the state rate. There is a clear disparity that exists within the county, in 2019 the rate was 8 times higher among the non-Hispanic Black population compared to the non-Hispanic White population, 48.5 and 6.0 per 100,000, respectively.

This figure shows AIDS cases rate per 100,000 population in Martin County and Florida by race between 2014 and 2018. The rate among the non-Hispanic White population in the county has fluctuated over the years shown but has remained below the state. The rate among the non-Hispanic Black population in the county has fluctuated in the years shown and was higher than the state in 2016 and 2018. There is a disparity that exists within the county as the non-Hispanic Black population has had considerably higher rates than the White population. In 2018, these rates were 37.4 and 4.1 per 100,000, respectively.

SEXUALLY TRANSMITTED INFECTIONS

Sexually transmitted diseases (STDs) are infections that are passed from one person to another through sexual contact. The causes of STDs are bacteria, parasites, and viruses. There are more than 20 types of STDs, including chlamydia, gonorrhea, syphilis, HIV/AIDS.⁴¹ The table below presents infectious syphilis cases in Martin County and Florida between 2014 and 2018. The rate in the county has been steadily increasing since 2016 but has remained below that of the state. In 2018, the rate in the county was 9.0 per 100,000 population.

Table 127: Infectious Syphilis, Rate Per 100,000 Population, Martin County and Florida, 2014-2018

Year	Martin County			Florida

UNINTENTIONAL FALLS

Each year, millions of adults 65 and older fall in the United States. One out of five falls causes a serious injury such as a broken bone or a head injury. These injuries can make it hard for a person to get around, do everyday activities, or live on their own.⁴²

The table below presents hospitalizations for non-fatal unintentional falls in Martin County and Florida between 2014 and 2018. The rate has fluctuated in the years shown and has remained consistently higher than the state.

Table 131: Hospitalizations for Non-Fatal Unintentional Falls, Rate Per 100,000 Population, Martin County and Florida, 2014-2018

Year	Martin County			Florida		
	Count	Denom	Rate	Count	Denom	Rate
2014	767	148,900	515.1	67,864	19,579,871	346.6

MORTALITY

LEADING CAUSES OF DEATH

The table below shows the leading causes of death in Martin County in 2019. In this year, there was a total of 7,030 years of potential life lost per 100,000 under 75 years of age. The leading cause of death in the county was heart disease, which resulted in 445 deaths; accounted for 22.7% of total deaths; a crude death rate of 281.6 per 100,000; an age-adjusted death rate of 111 per 100,000; and 757.8 years of potential life lost per 100,000 under 75 years of age. The second leading cause of death in the county was cancer, which accounted for 444 deaths; 22.6% of all deaths; a crude death rate of 281 per 100,000; an age-adjusted death rate of 129.1 per 100,000; and 1,614 years of potential life lost per 100,000 under 75 years of age. Other notable findings include the age-adjusted death rate due to unintentional injury in the county was higher than the state (63.7 compared to 55.5) and accounted for 1,781.5 years of potential life lost in the county, which was higher than the state's number of 1,530.9. Additionally, the age-adjusted suicide death rate in the county was higher than the state (16 compared to 14.5) and accounted for 469.4 years of potential life lost, which was higher than the state's number of 426.1.

Table 133: Leading Causes of Death, Rate Per 100,000 Population, Martin County, 2019

Causes of Death	Deaths	Percent of Total Deaths	Crude Death Rate Per 100,000	Age-Adjusted Death Rate Per 100,000	YPLL < 75 Per 100,000 Under 75

ALZHEIMER'S DEATHS

This table presents the age-adjusted Alzheimer's disease deaths between 2015 and 2019 in Martin County and Florida. Martin County has had a higher Alzheimer's disease age-adjusted death rate than Florida in the years shown. Between 2015 and 2016, the rate in the county increased, but then trended down between 2016 and 2018. Between 2018 and 2019, there was a slight increase.

Table 134: Age-adjusted Alzheimer's Disease Deaths, Rate per 100,000 Population, Martin County and Florida, 2015-2019

Years	Martin		Florida	
	Count	Rate	Count	Rate
2015	105	25.0	7,021	22.4
2016	132	30.9	7,152	22.2
2017	119	27.2	6,956	21.0
2018	93	20.4	6,711	20.0
2019	104	22.6	6,531	18.8

Compiled by: Health Council of Southeast Florida, 2020

The table below shows Alzheimer's disease age-adjusted deaths in Martin County and Florida by race between 2015 and 2019. From 2016 to 2018, the rate among the White population in Martin County steadily decreased; however, in 2019 this rate increased. For all years except 2018, the Alzheimer's death rate among the White population in Martin was higher than the state. From 2015 to 2017, the rate among the non-White population in the county has fluctuated; however it has decreased in 2018 and 2019. Among the non-White population this rate was higher than the state from 2015 to 2017. In 2019, the rate for the White population in the county was 22.9 per 100,000 and for the non-White population was 8.5 per 100,000 population. It is important to note caution should be used when comparing rates when the counts are less than 5.

Table 135: Age-adjusted Alzheimer's Disease Deaths, Rate per 100,000 Population, by Race, Martin County and Florida, 2015-2019

Years	Martin County				Florida			
	White		Non-White		White		Non-White	
	Count	Rate	Count	Rate	Count	Rate	Count	Rate
2015	101	24.8	4	40.8	6,470	22.7	550	19.2
2016	130	31.3	2	21.0	6,631	22.7	517	17.0
2017	114	26.7	5	47.7	6,465	21.7	490	15.3
2018	91	20.4	2	16.3	6,171	20.4	534	16.5
2019	103	22.9	1	8.5	6,020	19.3	509	14.8

Data note: Use caution when interpreting rates and ratios based on small numbers of events. Rates and ratios are considered unstable if they are based on fewer than 5 cases or if the denominator (population at risk) is fewer than 20.

The table below shows Alzheimer's disease age-adjusted death rate per 100,000 population in Martin County and Florida by ethnicity between 2015 and 2019. Between 2016 and 2018, the rate of people who died of Alzheimer's disease and identified as Hispanic in Martin County declined but the rate increased in 2019. Compared to the Hispanic population in the state, the rate among the Martin County Hispanic population was higher than the state in 2015, 2016, and 2019. In 2019, the rate among the Hispanic population in the county was 45.1 per 100,000 population. It is important to note caution should be used when comparing rates when the counts are less than 5.

Table 136: Age-adjusted Alzheimer's Disease Deaths, Rate per 100,000 Population, by Ethnicity, Martin County and Florida, 2015-2019

Years	Martin County				Florida			
	Hispanic		Non-Hispanic		Hispanic		Non-Hispanic	
	Count	Rate	Count	Rate	Count	Rate	Count	Rate
2015	3	39.4	102	24.8	1,078	25.6	5,925	21.9
2016	5	59.9	127	30.3	1,192	26.4	5,941	21.5
2017	2	20.0	117	27.4	1,236	25.9	5,701	20.2
2018	2	17.1	91	20.4	1,308	25.2	5,390	19.0
2019	5	45.1	99	22.0	1,302	24.1	5,219	17.8

Data note: Use caution when interpreting rates and ratios based on small numbers of events. Rates and ratios are considered unstable if they are based on fewer than 5 cases or if the denominator (population at risk) is fewer than 20.

CANCER DEATHS

As previously mentioned, cancer is the leading cause of death in Martin County and Florida. The table below compares the age-adjusted cancer death rate for Martin County and Florida from 2015 to 2019. For the observed years, Martin County's cancer death rate was consistently lower than the state but higher than the Healthy People 2030 target of 122.7. The death rate decreased from 142.6 per 100,000 population in 2015 to 129.1 per 100,000 in 2019, and there was a slight increase in 2018.

Table 152: Cancer Age-Adjusted Death Rate, Rate Per 100,000, Martin County and Florida, 2015-2019

Healthy People 2030 Target

71.1 coronary heart disease deaths per 100,000 population

The table below shows the age-adjusted cancer death rate by race. Between 2015 and 2019, the age-adjusted death rate among White Martin residents had a downward trend with a slight increase in 2018. Conversely, the age-adjusted death rate for the non-White population doubled in 2016 and then gradually decreased. Additionally, non-White residents had a higher cancer death rate than the state and their White counterparts. This disparity was most pronounced in 2017 with a death rate of 163.7 cancer death per 100,000 for non-White residents and 132.7 per 100,000 for White residents.

Nationally and in Florida, tobacco use is a leading cause of cancer and of death from cancer. Exposure to tobacco from the use of tobacco products or secondhand exposure to tobacco smoke increases a person's risk of cancer because tobacco products and secondhand smoke have many chemicals that damage DNA.⁴⁵

The table below shows the age-adjusted tobacco-related cancer death rate. In 2014, the tobacco-related cancer death rate was higher than the state at 69.5 deaths per 100,000 population. Since 2014, the tobacco-related cancer death rate has consistently decreased and remained lower than the state death rate.

The table below shows the age-adjusted diabetes death rate by ethnicity. The diabetes death rate for non-Hispanic residents has increased since 2015 from 7.0 deaths per 100,000 to 12.8 death per 100,000. Among Hispanic residents, the diabetes death rate fluctuated between 0 deaths per 100,000 to 25.6 deaths per 100,000. However, caution must be taken when comparing these rates since five or fewer diabetes deaths among Hispanic residents each year were used to calculate these rates.

HIV DEATHS

The table below shows the HIV/AIDS age-adjusted death rate for Martin County and the state. The HIV/AIDS death rate in Martin County has fluctuated over the years shown, and was highest in 2016 at 3.9 deaths per 100,000. Since there were less than five HIV/AIDS deaths during the observed time-frame, these rates are unstable and caution should be taken when comparing them.

Table 159: HIV/AIDS Age-Adjusted Death Rate, Rate Per 100,000, Martin County and Florida, 2015-2019

Year	Martin County		Florida	
	Count	Rate	Count	Rate
2015	0	0.0	873	4.0
2016	5	3.9	864	3.9
2017	2	0.6	749	3.2
2018	1	1.1	692	2.9
2019	0	0.0	692	2.8

The table below shows the HIV/AIDS age-adjusted death rates by ethnicity in Martin County and Florida between 2015 and 2019. In the county, the rate has fluctuated among the Hispanic population and has decreased since 2016 among the non-Hispanic population. It is important to note rates with a count of less than five are too unstable to compare.

Table 161: HIV/AIDS Age-Adjusted Death Rate, by Ethnicity, Rate Per 100,000, Martin County and Florida, 2015-2019

HEALTH RESOURCES AVAILABILITY AND ACCESS

This section presents the health resources in Martin County in an effort to illustrate residents' ability to access these resources and whether there are any gaps that exist. An adequate supply of health resources is imperative for the health of the community given it will, in part, determine whether residents can access preventative or routine care, can receive care by specialists for specific conditions, or the quality of care they will receive in the event of an emergency.

HOSPITAL AND EMERGENCY DEPARTMENT UTILIZATION

This table shows hospital utilization in Martin County in the calendar year 2019, including beds licensed, average daily census, occupancy rate, number of admissions, patient days, and the average length of stay. There were 19,602 admissions, 99,363 patient days, and an average length of stay of 5.1 days.

Table 175: Hospital Utilization, Martin County Facilities, January - December 2019

Facility	Beds Licensed	Avg Daily Census	Occupancy Rate	Number of Admissions	Patient Days	Avg Length of Stay
Coral Shores Behavioral Health	80	23.4	29.2%	1,676	8,527	5.1

Ambulatory Care Sensitive conditions are conditions where timely and effective ambulatory or out-patient care can decrease hospitalizations by preventing the onset of an illness or condition, controlling an acute episode of an illness or managing a chronic disease or condition.⁴⁶ High rates of Ambulatory Care Sensitive hospitalizations in a community may be an indicator of a lack of or failure of prevention efforts, a primary care resource shortage, poor performance of primary health care delivery systems, or other factors that create barriers to obtaining timely and effective care.

The table below shows preventable hospitalizations under 65 from all conditions in Martin County and Florida between 2015 and 2019. The rate in the county increased steadily from 2015 to 2017 but has decreased since 2018. The rate in the county has remained below that of the state. In 2019, the rate of preventable hospitalizations in the county was 832.3 per 100,000 population under 65.

Table 176: Preventable Hospitalizations Under 65 from All Conditions, Rate Per 100,000 Population Under 65, Martin County and Florida, 2015-2019

Year	Martin County			Florida		
	Count	Denom	Rate	Count	Denom	Rate
2015	990	106,155	932.6	186,540	16,103,893	1158.4
2016	1,059	106,066	998.4	184,205	16,297,600	1130.3
2017	1,103	106,218	1,038.40	170,312	16,481,873	1033.3
2018	966	108,303	891.9	161,107	16,760,374	961.2
2019	909	109,213	832.3	157,190	16,926,938	928.6

Data note: Hospitalization data before October 2015 uses ICD-9-CM; starting in October 2015, hospitalization data use ICD-10-CM. Consequently, increases or decreases starting in 2015 may not be due to changes in disease trends but due to changes in coding.

HEALTH PROFESSIONAL SHORTAGE AREAS (HPSAS)

Health Professional Shortage Areas (HPSAs) are designated by the Health Resources and Services Administration (HRSA) as having shortages of primary care, dental care, or mental health providers and can be geographic (a county or service area), population (e.g., low income or Medicaid eligible) or facilities (e.g., federally qualified health centers, or state or federal prisons).⁴⁷ Scoring criteria among all disciplines of HPSAs includes the population-to-provider ratio, the percentage of the population below 100% of the Federal Poverty Level (FPL), and travel time to the nearest source of care (NSC) outside the HPSA designation.⁴⁸ Each discipline has additional scoring criteria as well. Scores range

⁴⁷ Health Resources and Services Administration (2020). Health Professional Shortage Areas (HPSAs). Retrieved from <https://bh.w.hrsa.gov/shortage-designation/hpsas>

⁴⁸ Health Resources and Services Administration (2020). Shortage designation scoring criteria. Retrieved from <https://bh.w.hrsa.gov/shortage-designation/hpsa-criteria>

from 1 to 25 for primary care and mental health and 1 to 26 for dental. The higher the score on the HPSA, the greater the priority for the area.

There are four components used for scoring the primary care HPSA: population-to-provider ratio, percent of the population below 100% FPL, infant health index (based on infant mortality rate or low birth rate), and travel time to NSC. Primary care HPSAs can receive a score between 0-25.

This table shows there are three primary care Health Professional Shortage Areas in Martin County as of May 2020.

Table 196: Primary Care Health Professional Shortage Area (HSPA), Martin County, As of May 2020

MEDICALLY UNDERSERVED AREAS/POPULATIONS (MUAS/MUPS)

Medically Underserved Areas (MUAs)/Populations (MUPs) are designated by the Health Resources Service Administration (HRSA) as having too few primary care providers, high infant mortality, high poverty or a high elderly population.³⁶ MUAs may include a whole county; a group of neighboring counties; a group of urban census tracts; or a group of civil divisions. MUPs are specific sub-groups of people living in a defined geographic area that may face economic, cultural, or linguistic barriers to health care. MUPs may include the homeless, low-income, Medicaid-eligible, Native American, or migrant farm workers. MUA/P designations are based on the Index of Medical Underservice (IMU). The IMU is calculated based on four criteria: the population-to-provider ratio, the percent of the population below the FPL, the percent of the population over age 65, and the infant mortality rate. The IMU can range from 0 to 100, where zero represents the completely underserved. Areas or populations with IMUs of 62.0 or less qualify for designation as an MUA/P.

This table shows Indiantown is the one Medically Underserved Area in Martin County as of May 2020.

Table 199: Medically Underserved Areas and Populations, Martin County, As of May 2020

HEALTH INSURANCE

The 2019 Kaiser Family Foundation report on health insurance found that not having health insurance can have serious health consequences for the uninsured because they receive less preventative care, and delayed care often results in serious illness or other health problems.⁴⁹ Being uninsured can also have serious financial consequences, with many unable to pay their medical bills, resulting in large medical debt.

This table presents the percentage of adults with any type of health insurance coverage in Martin County and Florida in 2010, 2013, 2016, and 2019. The percentage in the county has decreased in 2013, stayed stable between 2013 and 2016, and decreased again in 2019. In all years, the county percentage has been higher than the state. In 2019, close to 85% of adults reported having any type of health insurance.

Table 200: Percentage of Adults with Any Type of Health Insurance Coverage, Martin County and Florida, 2010, 2013, 2016, 2019

Year	Martin County	Florida

This table presents the percent of adults who could not see a doctor in the past year due to cost in Martin County and Florida in 2010, 2013, 2016, and 2019. The percent who reported an inability to receive medical care due to cost fluctuated between 2010 and 2019 for Martin County. Martin County reported a higher percentage than the state of Florida in 2010 and 2016, but a lower percentage in 2013 and 2019. The lowest rate of 11.9% was reported in 2019 by Martin County.

Table 201: Adults Who Could Not See a Doctor in the Past Year Due to Cost, Martin County and Florida, 2010, 2013, 2016, 2019

Year	Martin County	Florida
2010	18.0%	17.3%
2013	13.4%	20.8%
2016	17.0%	16.6%
2019	11.9%	16.0%

Florida KidCare is the umbrella brand for the four government-sponsored health insurance programs – Medicaid, MediKids, Florida Healthy Kids and the Children’s Medical Services Managed Care Plan. MediKids is a program for children ages one year through 4 years whose family makes 133-200% of the federal poverty level.

The table below shows children under five years old covered by MediKids in Martin County and Florida between 2015 and 2019. The percentage in the county was consistent between 2015 and 2018 and decreased in 2019. The percentages in the county have been similar to the state. In 2019, 1% of children under five years were covered by MediKids.

Table 206: Children Under 5 Years Old Covered by MediKids, Martin County and Florida, 2015-2019

HEALTH DISPARITIES

The health of our neighborhoods, cities, states and our country is decided by how intentionally we work across all sectors of our communities, with all stakeholders, and between every corner of our neighborhoods to eliminate health disparities among those populations experiencing a disproportionate burden of disease, disability, and death.

According to the Centers for Disease Control and Prevention (CDC), health disparities are differences in health outcomes and their root causes among groups of people. While the term health disparities is often interpreted to mean racial or ethnic disparities, many dimensions of disparity exist in our country. Systemic racism, sex, sexual identity, age, disability, socioeconomic status, and geographic location all contribute to an individual's ability to achieve good health.

For this report, we highlight key racial and ethnic disparities uncovered in maternal and child health, behavioral health, morbidity, mortality, and socio-economic data along with geographic location in Martin County, Florida.

MATERNAL AND CHILD HEALTH DISPARITIES

- In 2019, one quarter of mothers in the county had less than adequate prenatal care, which was similar to the state; However, a higher percentage of Black mothers in the county had less than adequate prenatal care compared to White mothers, (39.2% and 21.5% respectively)
- In 2019, the percentage of births to mothers who were overweight or obese at the time of pregnancy occurred was 28%, which was similar to the state (27.6%); However, a higher percentage of mothers who self-identified as Black or Some other race were overweight or obese at the time pregnancy occurred compared to White mothers (31.6% compared to 26.6%)
- In 2019, Martin County had a birth rate of 7.6 per 1,000 live births, which was lower than the state at 10.3 1,000 live births; However, mothers who identified as Black or Some other race had a higher birth rate than mothers who identified as White (14.2 compared to 8.6). Hispanic mothers had a birth rate 3 times higher than non-Hispanic mothers (18.4 compared to 5.7)
- In 2019, the rate of births to mothers 17 and younger was 1.1 per 1,000 live births which was the same as the state. Among mothers ages 18-19, the birth rate was 26.9 per 1,000 live births which was lower than the state (32.6 per 1,000 live births)
- In 2019, the fetal death rate was 3.3 per 1,000 live births which was lower than the state (6.8 per 1,000 live births); Among mothers who identified as Black or Some other race the fetal death rate was zero in 2019; However, the fetal death rate among Hispanic mothers was almost double the rate of non-Hispanic mothers (4.9 compared to 2.6 per 1,000 live births).

BEHAVIORAL HEALTH DISPARITIES

- In 2019, the suicide age-adjusted death rate in Martin County was 16.0 per 100,000 population with a total of 32 suicides; Of the 32 suicides, 10 were ages 55-64 (31.3%), 6 were ages 65-74 (18.8%), 4 were ages 75-84 (12.5%), 4 were ages 45-54 (12.5%), 3 were ages 25-34 (9.4%), 2 were ages 20-24 (6.3%), and 1 was between 10-14 (3.1%), 1 was between 35-44 (3.1%), and 1 was older than 85 (3.1%)
- The suicide rate among the White population has been consistently higher than among the Black population; in 2019, it was 16.8 and 5.8 per 100,000 –almost triple

MORBIDITY DISPARITIES

- In 2019, these rate of coronary heart disease hospitalization was 203.6 per 100,000, which was lower than the state (274.1 per 100,000); However, the hospitalization rate among the Black population in the county has been consistently higher than the White population. In 2019, these rates were 286.2 and 195.1 per 100,000 –nearly 1.5 times higher
- In 2019, the diabetes hospitalization rate in the county was 1,380 per 100,000, which was lower than the state (2,350.4 per 100,000); However, in 2019, the hospitalization rate among the Black population was 3.6 times higher than the white population (4,249.2 compared to 1,175.9 per 100,000 respectively). Similarly, the rate among the Hispanic population was higher than among non-Hispanic (1,965.2 compared to 1,334.5 per 100,000)
- In 2019, the hospitalization rate due to stroke in the county was 227.5 per 100,000 which was lower than the state (236.9 per 100,000); However among the Black population (in 2019) the hospitalization rate due to stroke was higher than the white population rates were 269.5 and 217.4 per 100,000, respectively
- In 2019 the CLRD hospitalization rate was 307.5 per 100,000, which was higher than the state 257.6 per 100,000; However within the county, there is a disparity that exists with residents who identified as Black or Some other race, which was much higher rate than the White population, in most years it was two times higher. In 2019, the hospitalization rate was 546.1 compared to 275.5 per 100,000
- In 2019, the rate in the county for both the White population and the Black population has steadily decreased since 2016. In 2017, the rate among the White population in the county was higher than the state. For 2017 and 2018, the rate among the Black population in the county was higher than the state. There is a disparity in the county as the Black population has had more than double the hospitalization rate from or with asthma than the White population. In 2018 these rates were 1,113.2 and 438.0 per 100,000, respectively.
- Age-adjusted emergency room visits due to asthma rate per 100,000 population in Martin County and Florida by race between 2014 and 2018. These rates have fluctuated for both racial groups in the county. The rate among the White population in the county has been consistently lower than in the state and the Black population in the county has been mostly lower than the state. There is a disparity within the county as the Black population has had consistently higher rates than the White population; in 2018, this disparity was nearly five times as much (211.1 per 100,000 for the White population and 1,036.1 per 100,000 for the Black population.)
- Between 2014 and 2017, the cancer incidence rate in the county was higher than the state. In 2017, these rates were 455.4 and 441.9 per 100,000 respectively; However, the rate among the White population and Black population in the county was higher than that of the state in 2014-2016. In 2016, the cancer incidence rate in the county among the Black population was higher than that of the White population (521.3 and 464.9 per 100,000 population, respectively). Additionally, The rate among the Hispanic population in the county has fluctuated over the years shown. In 2016, the rate among the Hispanic population was lower than the non-Hispanic population (376.7 and 482.2 per 100,000, respectively).
- Between 2013 and 2016, the breast cancer incidence rate in the county was higher than the state. In 2017, these rates were 118.4 and 96.9 per 100,000 respectively. While the rate among White females in the county has been steadily decreasing and has been mostly decreasing for Black females in the county, the rate among Hispanic females in the county has been steadily increasing.
- In 2019, the hospitalization rate due to non-fatal unintentional falls in the county was higher than the state, 546.8 and 353.8 per 100,000 respectively; However, this rate was 4 times higher among the Black population compared to the White population, 571.6 and 132.1 per 100,000 respectively

MORTALITY DISPARITIES

- In 2019 the death rate due to major cardiovascular disease was 159.9 per 100,00 compared to 198.9 per 100,000 in the state. In 2019, the rate was 141.7 per 100,000 for Black population and 159.5 per 100,000 for White population. The rate was 99.4 per 100,000 among the Hispanic population and 161.7 per 100,000 for the non-Hispanic population
- In 2019, the cancer death rate in the county was 129.1 per 100,000 compared to 142.8 per 100,000 in the state. Since 2016, the Black population has consistently had a higher cancer death rate than the White population. In 2019 the rate was 138.9 among the Black population compared to 127.2 per 100,000 among the White population. In 2019, this rate was lower among the Hispanic population compared to the non-Hispanic population 120.5 compared to 127.5 per 100,000.

SOCIO-ECONOMIC AND GEOGRAPHIC DISPARITIES

- In 2018, the percentage of individuals living below the poverty level that identified as Some other race was more than triple that of individuals that identified as White, followed by two and a half times higher among those who identified as Black or African American.
- Similarly, individuals identifying as Hispanic or Latino origin saw rates that were over two and a half times higher than individuals identifying as Non-Hispanic or Latino, 23.0% and 8.5% respectively.
- One-sixth of individuals living in poverty were under the age of 18 years old
- In 2018, fifteen percent of the population in the Indiantown County Census Division (CCD) were living in poverty, which was 5% higher than the county overall. Over a quarter (27.7%) of those in the Indiantown CCD that were living in poverty were under 18 years old.
- The percent of households that live in poverty and are Asset Limited, Income Constrained, Employed (ALICE) was 37.9% in 2018. Within the three CCDs 40.6% of households in the Indiantown CCD, 41.4% of households in Port Salerno-Hobe Sound CCD and 40.5% of households in Stuart CCD were ALICE or living in poverty.

THE SOCIAL DETERMINANT UNDERPINNINGS TO HEALTH DISPARITIES

According to the CDC, social determinants of health (SDoH) are the conditions in the environment where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks. Examples of SDoH may include: poverty, education, housing, transportation, and social isolation. It's important to note that health inequities are different from health disparities. Health inequities are the differences in health that are a result of systemic, avoidable and unjust social and economic policies and practices that create barriers to opportunity. Health disparities are differences in health status among distinct segments of the population (Braveman, 2014).⁵²

SDoH are shown to be key drivers of health inequities in every community across the United States and should be addressed in combination with efforts to eliminate health disparities (HP2030). For example, several studies suggest that just promoting healthy food choices in food insecure communities or issuing prescriptions for food will not eliminate chronic diseases and other chronic disease health disparities. Instead, communities need to mobilize cross-sector partners in education, transportation, and housing to take action on developing and funding more upstream efforts to improve the conditions in people's environments.

⁵² Braveman P. (2014). What are health disparities and health equity? We need to be clear. Public health reports (Washington, D.C. : 1974), 129 Suppl 2(Suppl 2), 5–8. <https://doi.org/10.1177/00333549141291S203>

Healthy People 2030 places an increased focus on SDoH highlighting the importance of upstream factors. Communities committed to decreasing health disparities are encouraged to take an additional step toward aligning their community health improvement plans with Healthy People 2030's five overarching place-based domains specifically related to SDoH:⁵³

- Economic stability
- Education access and quality
- Health care access and quality
- Neighborhood and built environment
- Social and community context.

COMMUNITY THEMES AND STRENGTHS ASSESSMENT

INTRODUCTION

Gleaning the community's perspective of health and the public health system is essential to fully understanding how to improve a community's health. The Community Themes and Strengths Assessment (CTSA) provides a deep understanding of community issues, concerns, and perceptions about the quality of life from the viewpoint of community members, business leaders, and providers. The results of the CTSA provides context to the data presented above in the Community Health Status Assessment and reveals the community's thoughts, experiences, opinions, and concerns related to the health of the community.

METHODOLOGY

The purpose of the CTSA is to glean the community's thoughts, opinions, and concerns regarding the issues of importance and their perception of the quality of life in Martin County. This assessment answers the questions:

- How is the quality of life perceived by our community?
- What factors define a healthy community?
- What are the most important health problems in our community?

The Florida Department of Health in Martin County, with input from the Health Council of Southeast Florida (HCSEF), selected a variety of community engagement strategies such as surveys, meetings, key informant interviews and focus groups to answer these assessment questions. To facilitate this process, HCSEF developed qualitative tools, such as a Martin County Community Health Survey for Residents and Providers/Stakeholders, a Key Informant Tool and a Focus Group Tool to capture the community's perspective. Each tool was designed to collect qualitative data from a cross-section of the community in order to identify key assets in Martin County and the most pressing health issues. All assessment tools can be found in the Appendix.

COMMUNITY HEALTH SURVEYS

METHODOLOGY

Two complementary surveys were developed to capture the individual and systems-level perspective of health and human services in Martin County: a Provider/Stakeholder Survey and a Resident Survey. For the purpose of this assessment, providers/stakeholders include a broad category of health and social service providers delivering services in Martin County or to the residents of the county (e.g., dentists, elected officials, faith-based leaders, etc.). Residents were defined as anyone age 18 or older who resides in Martin County, including seasonal residents. Responses from individuals who did not meet these criteria were excluded from the data analysis.

The Martin CHD enlisted the assistance of the Community Health Advisory Council to assist with survey dissemination and linking HCSEF with eligible participants. Respondents were recruited using a convenience sampling approach based on accessibility and willingness to participate.

PROVIDER/STAKEHOLDER SURVEY RESULTS

The figures in this section summarize the responses received by providers and stakeholders in Martin County. The number of responses received for each question is displayed (e.g., n=45), and the data is presented by the percent of all responses for each answer choice

Figures 84-89 highlight the types of organizations that completed the survey, the services they offer, where they provide services and the population they serve. The figure below shows that 40% of respondents were from community-based organizations and over a quarter selected 'Other' as their organization type. The following are the types of organization specified as 'Other':

- United Way
- Certified Domestic Violence Agency
- Not-for-profit
- Private clinician
- Mentoring
- Social Services Organization
- Chamber of Commerce
- Doula, Childbirth Education
- County Public Transit System
- Law firm
- Dental Clinic
- Local government

Figure 58: Percent of Responses to "What type of organization are you completing this on behalf of?"

Among the organizations represented, almost half (44%) provided educational services (e.g., Head Start, GED, child development, adult continuing education, literacy, after school programs, etc.). Over a quarter of respondents' organizations provided health education and/or promotion, eligibility screenings for social programs, 'Other' services, and mental health services. The following are the 'Other' types of services provides:

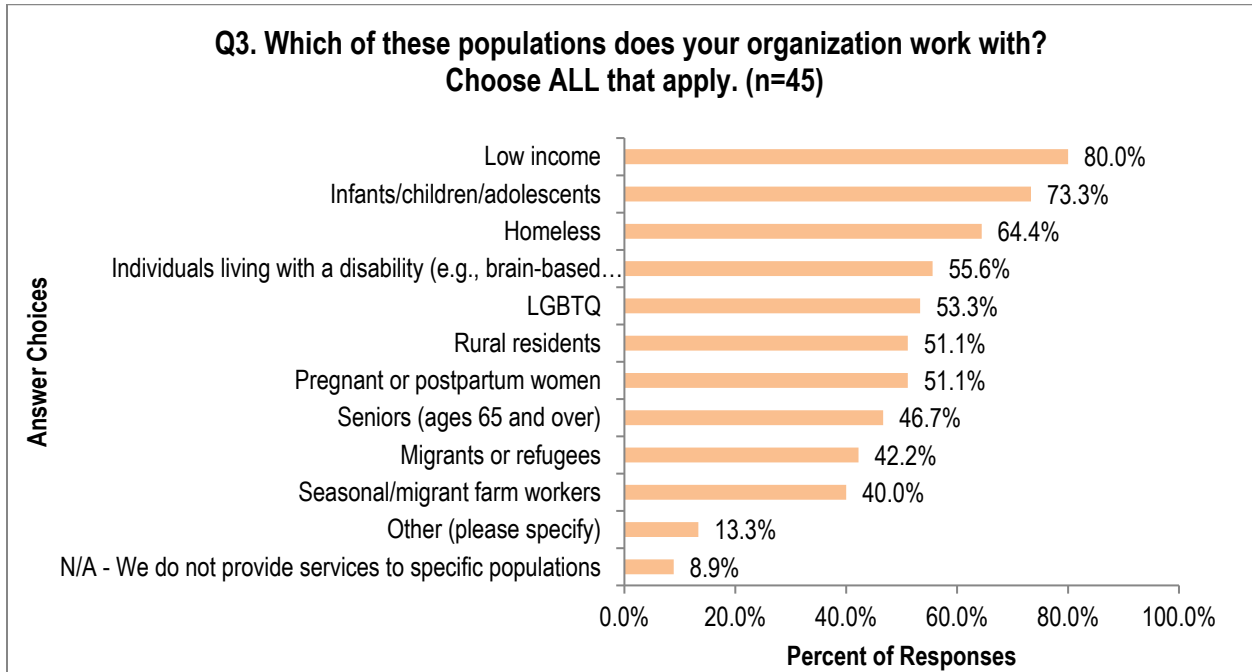

- Funding to Non-Profit and government entities
- We fund programs in most of the above
- Emergency shelter
- Domestic Violence
- Child care subsidies for low-income families
- Independent Living Skills Training
- Youth Mentoring
- School Dental Program, STD, Immunizations, Family Planning, Vital Statistics
- Business Services
- Physical and Emotional support
- Spiritual growth and care
- Grants to serve children and families
- Homeless Assistance, Prescription Assistance, Housing Assistance

Figure 59: Percent of Responses to "Which services does your organization provide?"

The majority of respondents' organizations (80%) served low income populations, and almost three-fourths served infants or youth.

Figure 60: Percent of Responses to "Which of these populations does your organization work with?"

As shown in the figure below, the majority of respondents (91-98%) serve a population whose primary language is either English or Spanish. Over half of the providers/stakeholders surveyed (55%) served a population whose primary language is Haitian Creole.

Figure 61: Percent of Responses to "What are the primary languages of the individuals your organization serves? "

The figure below shows where respondents' organization has a physical location.

Figure 62: Percent of Responses to "In what ZIP code(s) is your organization physically located?"

The figure above shows that most organizations represented in this survey have a physical location in Stuart (60%). However, the figure below shows that over 80% of the organizations provide services to most ZIP codes in Martin County.

Figure 63: Percent of Responses to "In what ZIP code(s) does your organization provide services?"

Figures 90- 94 captures the perspective of providers and stakeholders in Martin County about the health of the community.

The figure below highlights that over half of providers and stakeholders who responded rated the overall health of the community as 'Somewhat Healthy,' followed by over a quarter that rated it as 'Healthy.'

Figure 64: Percent of Responses to "How would you rate the overall health of your community?"

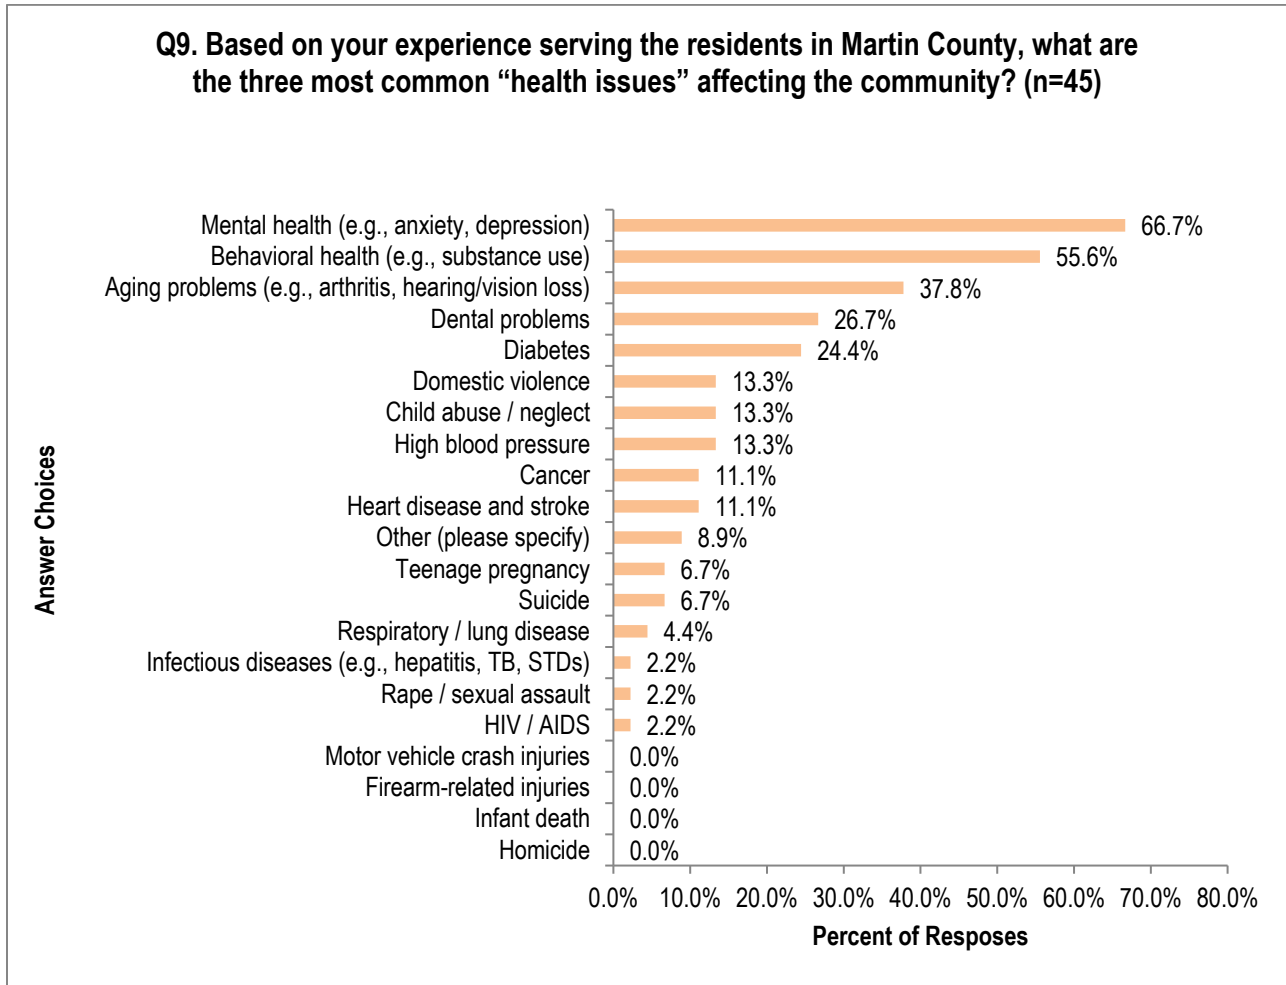

When asked what the three most important elements of a “healthy community” are, over half of the respondents said access to health care. This was followed by affordable housing (47%) and good jobs/healthy economy (44%).

Figure 65: Percent of Responses to “Based on your experience as a provider/stakeholder in Martin County, what are the three most important elements of a ‘healthy community’?”

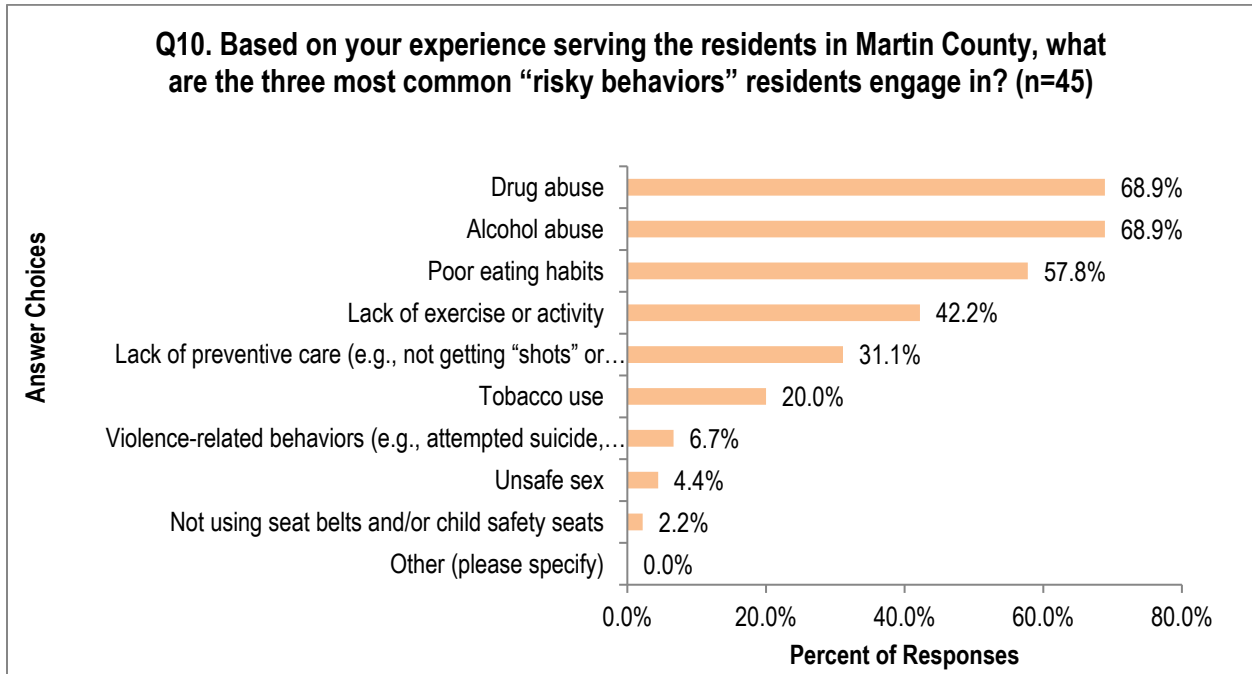

Among respondents, mental health (67%), behavioral health (56%) and aging problems (38%) were identified as the top three most common issues affecting the community.

Figure 66: Percent of Responses to "Based on your experience serving the residents in Martin County, what are the three most common 'health issues' affecting the community?"

The figure below shows that over half of respondents identified drug abuse, alcohol abuse and poor eating habits as the top three most common risky behavior the community engages in.

Figure 67: Percent of Responses to "Based on your experience serving the residents in Martin County, what are the three most common 'risky behaviors' residents engage in?"

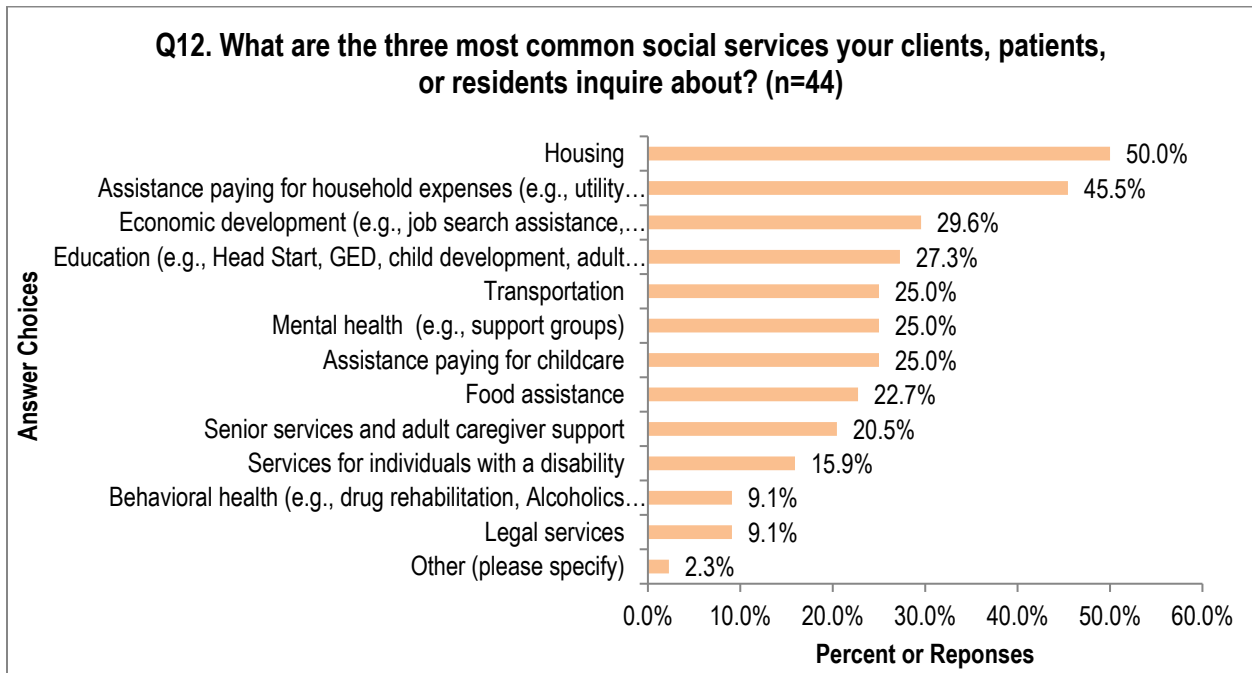

Over half of providers and stakeholders listed mental health as the most common health-related inquiry, they receive from residents. This was followed by health insurance (44%) and dental care (44%).

Figure 68: Percent of Responses to "What are the three most common health-related or medical services your clients, patients, or residents inquire about?"

The figure below highlights the social service needs of the community from the perspective of providers and stakeholders in Martin County. Half of the respondents identified housing as a common social service that residents they serve inquire about, followed by 45% who identified assistance paying for household expenses as a common inquiry.

Figure 69: Percent of Responses to “What are the three most common social services your clients, patients, or residents inquire about?”

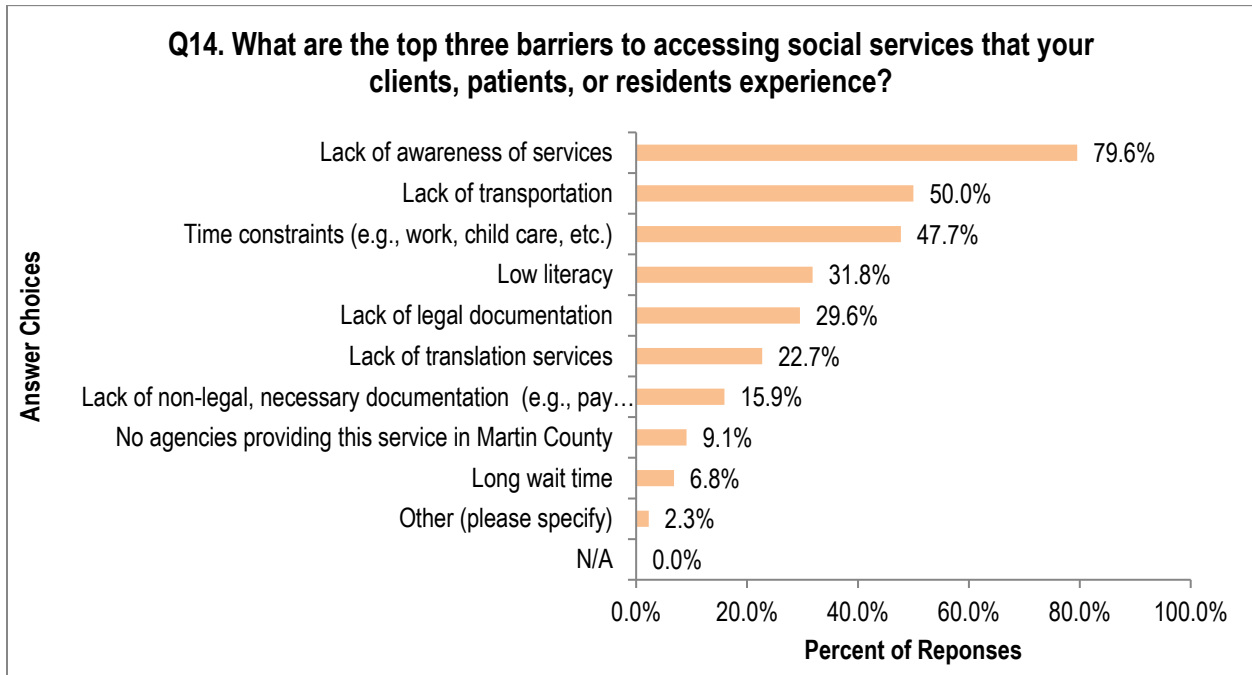

When providers and stakeholders were asked about the top three barriers, residents face when accessing medical services, almost three-fourths listed no insurance and cost as a barrier. This was followed by a lack of transportation (47%).

Figure 70: Percent of Responses to “What are the top three barriers to accessing medical services that your clients, patients or residents experience?”

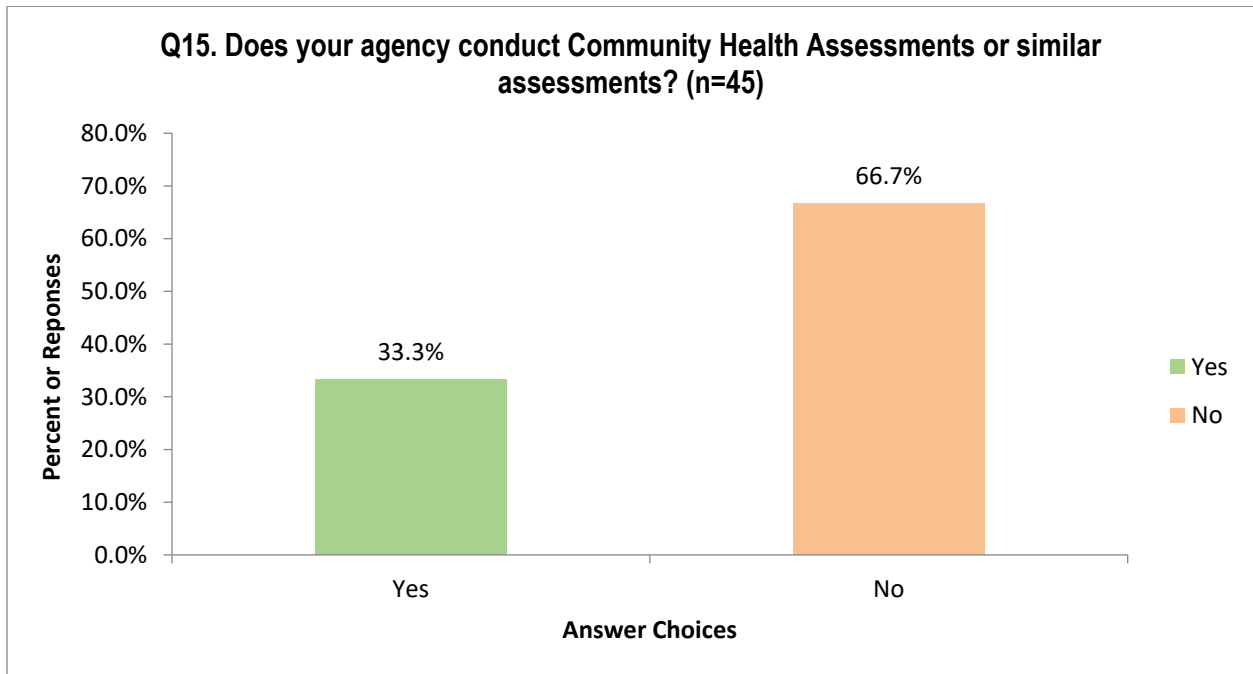

The top three barriers to accessing social services as perceived by providers and stakeholders in Martin County are shown in the figure below. Most respondents indicated that lack of awareness (80%), lack of transportation (50%) and time constraints (48%) were a barrier for residents they serve.

Figure 71: Percent of Responses to “What are the top three barriers to accessing social services that your clients, patients, or residents experience?”

The figure below shows that one-third of respondents' organizations conduct a community health assessment or a similar assessment.

Figure 72: Percent of Responses to "Does your agency conduct Community Health Assessments or similar assessments?"

The final question asked stakeholders whose organizations conducted an assessment to list the top three finds from their most recent assessment. Below is a list of those findings.

Q16. We strive to coordinate with the work that other agencies are doing. Please share the top three findings from your most recent assessment?

- Literacy Rates, Early Intervention, Prevention Services, Mental Health
- School health, knowledge of services, obesity
- We use census data and community health assessments completed by other local organizations to assess our priority levels. We found that our top three priority clients who fall in these three categories-
 - 1. A child younger than 13 years old from a family that includes a parent who is receiving temporary cash assistance under chapter 414 and subject to the federal work requirements.
 - 2. An at-risk child younger than nine years old.
 - 3. A child from birth to the beginning of the school year for which the child is eligible for admission to kindergarten in a public school under s. 1003.21(1)(a)2. Who is from a working family that is economically disadvantaged, and may include such child's eligible siblings, beginning with the school year in which the sibling is eligible for admission to kindergarten in a public school under s. 1003.21(1)(a)2. Until the beginning of the school year in which the sibling is eligible to begin 6th grade, provided that the first priority for funding an eligible sibling is local revenues available to the coalition for funding direct services.
- Not enough low-cost housing for persons under 55, transportation, help with utility bills
- Access to Care, School Health, Obesity
- Celebrate Recovery
- Entry into prenatal care, health disparities in breastfeeding
- Need for mental health assistance, need for affordable housing, need for free transportation
- Low School Readiness Rates, Lack of Quality Child Care, Increase support systems for children with Special Needs
- Transportation, Bank Food & Homeless shelters
- Affordable housing, mental health/addiction services, and utility assistance

RESIDENT SURVEY RESULTS

The figures in this section summarize the responses received by residents in Martin County. The number of responses received for each question is displayed (e.g., n=161), and the data is presented by the percent of all responses for each answer choice.

The figure below shows the ZIP Code in which the respondents live. All Martin county ZIP Codes were represented in this survey with the largest number of the respondents living in 34997 (18.6%) and 34956 (18.6%).

Figure 73: Percent of Responses to "In which ZIP Code do you live?"

Almost a quarter of respondents were 55-64, followed by 35-44 (17%) and 65-74 (16%).

Figure 74: Percent of Responses to "How old are you?"

Almost three-fourths of respondents self-identified as female, a quarter identified as male and less than 1% transgender.

Figure 75: Percent of Responses to "Do you think of yourself as:"

Among respondents, 86% self-identified as heterosexual and 7% self-identified as LGBTQ+.

Figure 76: Percent of Responses to "Do you think of yourself as:"

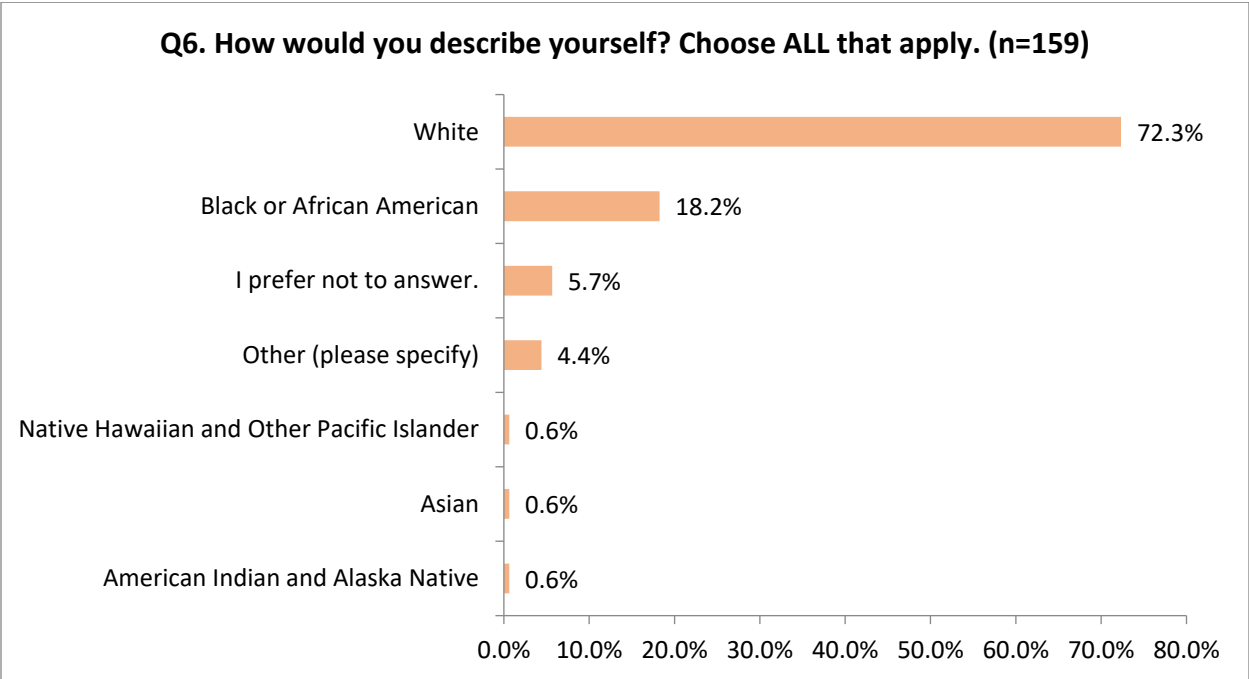

Eighteen percent of respondents were of Hispanic or Latino origin.

Figure 77: Percent of Responses to "Are you of Hispanic, Latino, or Spanish origin?"

The majority of respondents self-identified as White (72%), followed by Black or African American (18%). Among those who self-identified as Some other race, Hispanic was most frequently reported.

Figure 78: Percent of Responses to "Percent of Responses to "How would you describe yourself? Choose ALL that apply."

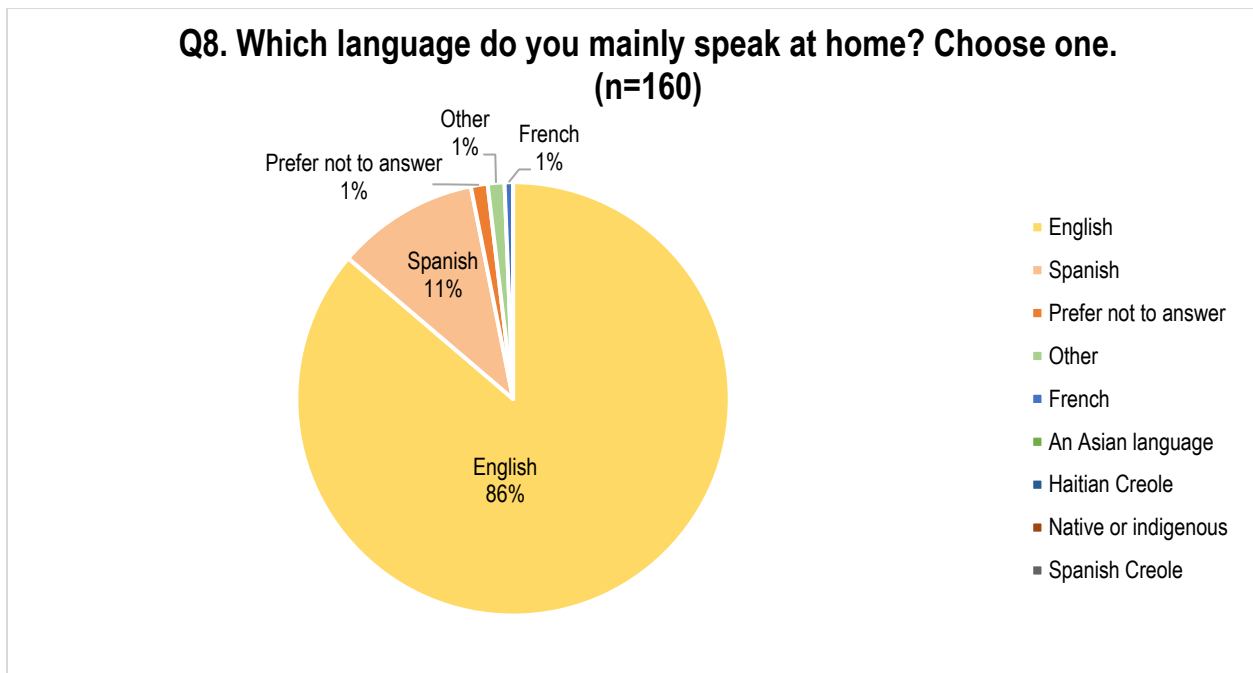

The figure below shows the marital status of respondents.

Figure 79: Percent of Responses to "What is your marital status? Choose one."

Among respondents the majority spoke English at home followed by Spanish (11%). Among those who selected other, Portuguese and the Mayan language of Popti' were indicated as the language spoken at home.

Figure 80: Percent of Responses to "Which language do you mainly speak at home? Choose one."

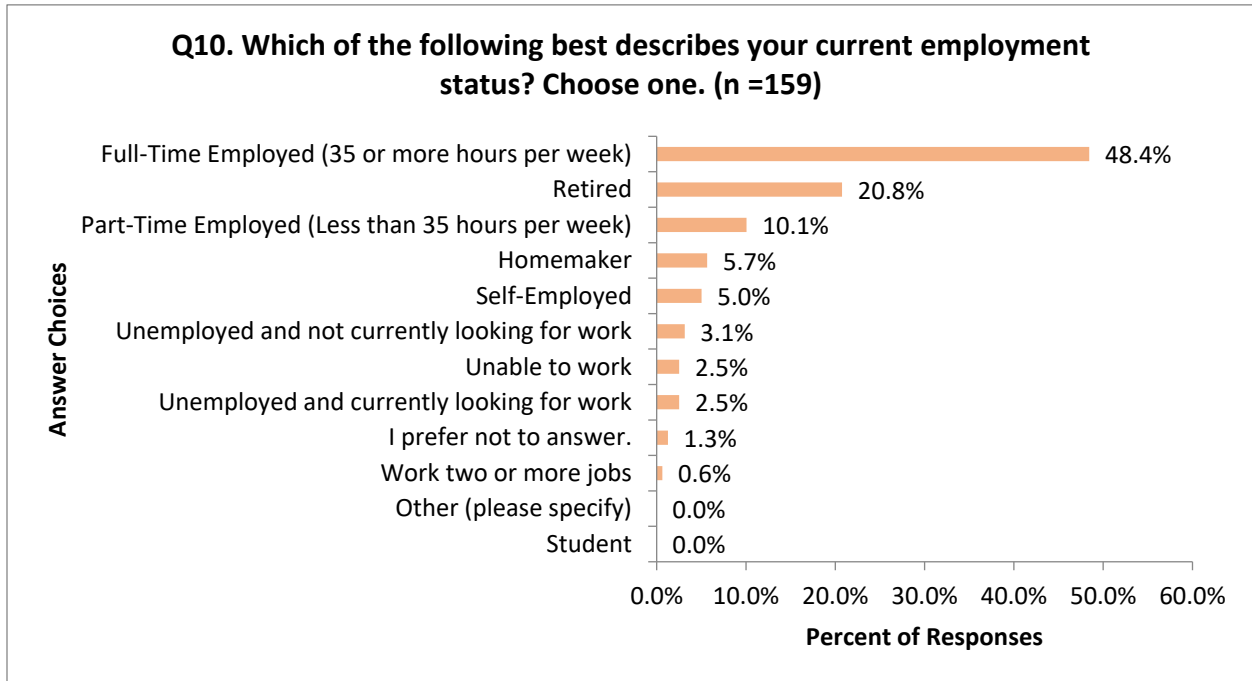

Almost a quarter of respondents had completed a Bachelor’s degree, followed by Masters (24%) and Some college (14%). Among those who selected other, it was indicated that they had never attended school.

Figure 81: Percent of Responses to "What is the highest level of school you have completed? Choose one."

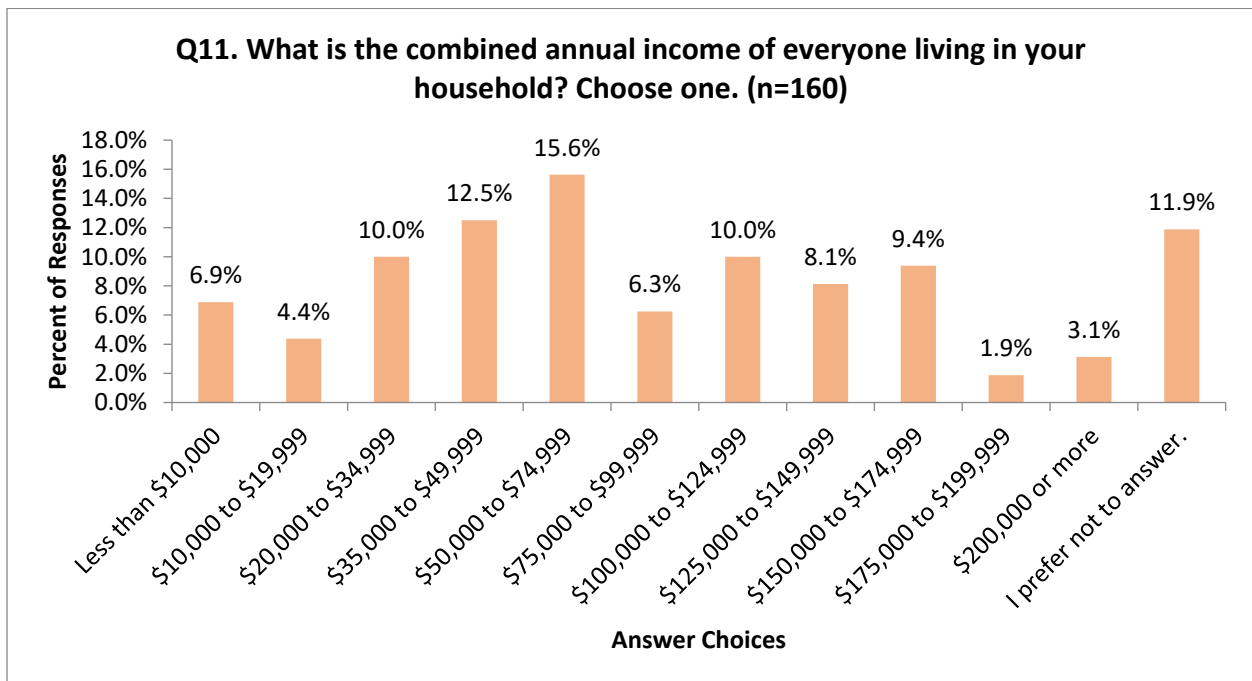

The figure below shows the employment status of respondents.

Figure 82: Percent of Responses to "Which of the following best describes your current employment status? Choose one."

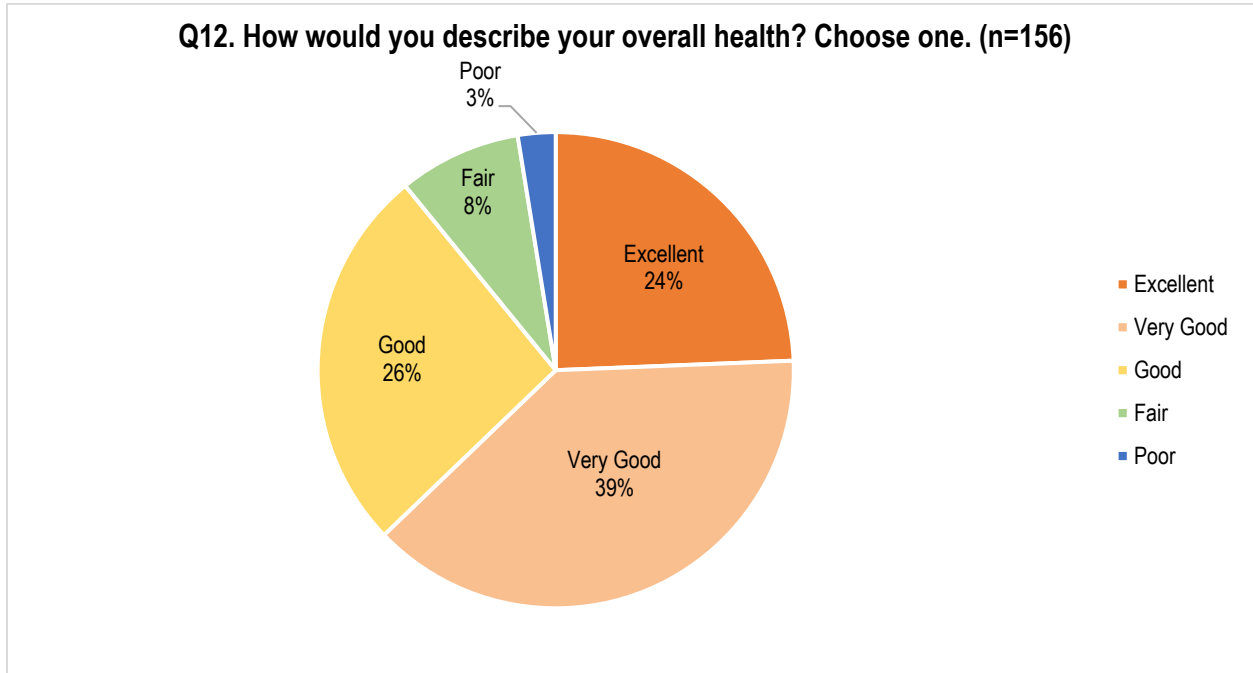

The figure below shows the combined annual household income of respondents.

Figure 83: Percent of Responses to "What is the combined annual income of everyone living in your household? Choose one."

The majority of respondents described their overall health as very good (39%), followed by good (26%). Five participants skipped this question.

Figure 84: Percent of Responses to "How would you describe your overall health? Choose one."

Questions 13 through 19 are designed to understand resident's source of care for preventative healthcare and urgent care to determine if residents have a usual source of care, gaps in care and over reliance on more expensive sources of care such as urgent care and emergency rooms.

Among respondents, almost three-fourths accessed preventative healthcare through a primary care provider, followed by a community health center (15%) and urgent care center (8%).

Figure 85: Percent of Responses to "Where do you most often go for preventative healthcare (e.g., yearly physical exam, immunizations, etc.)? Check ALL that apply."

Almost four percent of respondents selected other, the following were the responses indicated:

- In-home medical assistance
- Employee wellness center
- Oncologist and Gynecologist
- "It's been several years since I've had a checkup"
- Women's Health Center

Almost half of respondents accessed urgent healthcare through their primary care provider, followed by an urgent care center (37%) and emergency room (17%).

Figure 86: Percent of Responses to "Where do you most often go when sick or in need of urgent healthcare (e.g., injury, pain, flu, etc.)? Check ALL that apply."

The majority of respondents accessed a dentist for routine dental care, followed by a community health center (9%). However, almost one-fifth of respondents reported not receiving check-up for dental care. One respondent selected other and indicated receiving routine dental care in Mexico.

Figure 87: Percent of Responses to "Where do you most often go for routine dental care (e.g., teeth cleanings, twice a year exams, etc.)? Check ALL that apply."

Over half of respondents accessed a dentist for urgent dental care, followed by a community health center (8%). Over a quarter of respondents had not needed urgent dental care.

Figure 88: Percent of Responses to "Where do you most often go for urgent dental care (e.g., tooth pain, damaged tooth, etc.)? Check ALL that apply."

Almost one-fifth of respondents accessed routine behavioral health care through their primary care provider, followed by a mental health specialist (18%). Over half of respondents reported not needing routine behavioral health care. Other responses included employee assistance program and not applicable.

Figure 89: Percent of Responses to "Where do you most often go for routine behavioral health care (e.g., therapy, medication refills, substance abuse treatment, etc.)? Check ALL that apply."

Over three-fourths of respondents reported not needing urgent behavioral health care. Almost eight percent accessed urgent care through a mental health specialist followed by a primary care provider (8%). Other responses included not having urgent care available and not applicable.

Figure 90: Percent of Responses to "Where do you most often go for urgent behavioral health care (e.g., therapy, medication refills, substance abuse treatment, etc.)? Check ALL that apply."

Among respondents, the majority paid cash or did not have insurance coverage for dental care (33%) followed by behavioral health services (29%) and health care (14%).

Figure 91: Percent of Responses to "How do you pay for the following..."

Q19. Select your payment method. Choose one. (n=154)

Sixty percent of respondents did not need or have problems accessing primary care in the past 12 months. Among respondents that needed primary care in the past 12 months but did not receive care, the top three reasons for not accessing care was that no appointments were available or there were long waits for an appointment (19%) followed by not being able to afford the cost of care (18%) and care not being covered by insurance (16%).

Figure 92: Percent of Responses to "During the past 12 months, if there was a time you or your family needed PRIMARY CARE but DID NOT get the care you needed? If so, what were the top three PROBLEMS accessing services?"

Other responses include the following:

- COVID concerns
- Medicare
- The appointment was cancelled 3 times by the provider for other meetings or appointments. We are still waiting for the checkup for my 12 year old.
- I was new to the area and hadn't yet established with a new primary care provider
- Can't afford the downtime/healing time to recover from surgical procedures as one of my jobs is very physical and out in the elements. Also, multiple copays and lab fees that are not covered and are too costly.

Over half of respondents did not need or have problems accessing dental care in the past 12 months. Among respondents that needed dental care in the past 12 months but did not receive care, the top three reasons for not accessing care was not being able to afford the cost (27%), services were not covered by their insurance (14%) and they did not have insurance (12%).

Figure 93: Percent of Responses to "During the past 12 months, if there was there a time you or your family needed DENTAL CARE but DID NOT get the care you needed? If so, what were the top three PROBLEMS accessing services?"

Other responses included the following:

- Mexico
- Have not gone to the dentist due to COVID concerns
- My child has 2 cavities in baby teeth and the gas does not work on him. They told me our insurance won't cover the anesthesia to put him under for the care and told me it would be more than \$1,600 for the anesthesia. I cannot afford that.
- Terrified of dentists in general
- Mostly financial because I can't afford what insurance won't cover. I need more extensive work done.
- Appointment cancelled and unable to reschedule

The majority of respondents did not need or have problems accessing behavioral health services in the past 12 months. Among respondents that needed behavioral health services in the past 12 months but did not receive care, the top three reasons for not accessing care was not being able to afford the cost (9%), services were not covered by insurance (9%) and no appointments were available or long waits for appointments (8%).

Figure 94: Percent of Responses to "During the past 12 months, was there a time you or your family needed BEHAVIORAL HEALTH SERVICES (e.g., therapy, medication refills, substance abuse treatment, etc.) but DID NOT get the care you needed?"

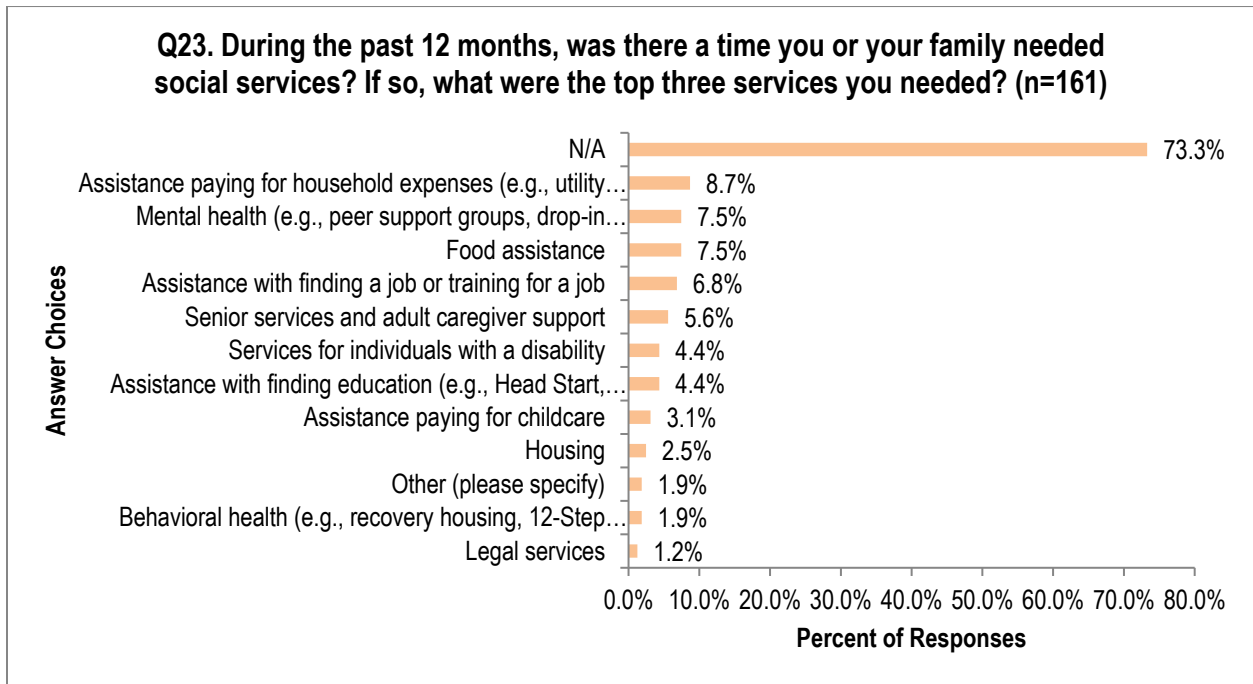

Other responses include the following:

- I didn't keep it, [I] let it elapse
- "My son needed services. Unfortunately there is such a wait time for providers likes Tykes and Teens and I have heard this from several friends that have tried to access services for their children. We were finally able to get in, but it was more than 8 days after I made the initial call that anyone even called us back. COVID-19 has proven to be quite a challenge in the mental health arena. Not to mention I needed to then wait yet again to be able to qualify for sliding scale. Even though I have insurance it does not cover it and now being separated my income is cut significantly so there were additional wait times built in to be able to qualify for sliding scale."
- Again I worry about the cost, [it is] over and above what my Humana plan covers

Almost three-fourths of respondents did not need social services in the past 12 months. Among those who did need services, the top three services needed were assistance paying household expenses, mental health services and food assistance.

Figure 95: Percent of Responses to "During the past 12 months, was there a time you or your family needed social services? If so, what were the top three services you needed?"

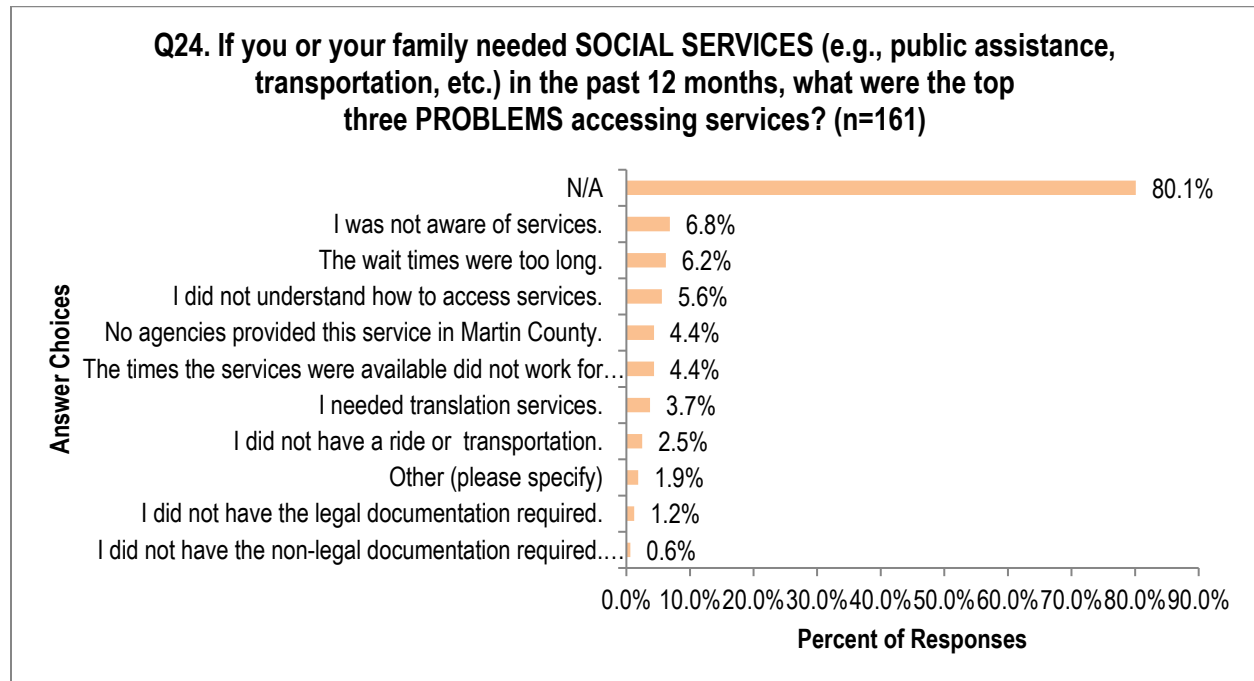

Other responses include the following:

- Insurance
- Healthcare for eye problem

The majority of respondents did not need social services or have problems accessing services in the past 12 months. Among respondents that needed social services in the past 12 months but had problems accessing services, the top three problems were not being aware of services (7%), long wait times (6%) and not knowing how to access services (6%).

Figure 96: Percent of Responses to "If you or your family needed SOCIAL SERVICES (e.g., public assistance, transportation, etc.) in the past 12 months, what were the top three PROBLEMS accessing services?"

Other responses included the following:

- Unfortunately, I am at the cusp to not be able to qualify for anything. Despite me being separated social service agencies will still take his income into consideration and my income is "too much". Yet after all my bills are paid to keep a roof over our head I have \$176 left a month for gas and groceries. There is a real problem in this community helping the families that are on the brink. There are services for the poor and homeless, but nothing for those families that are right on the cusp.
- I have tried over and over again to get some kind of disability assistance but for one reason or another I am not falling into the requirements. The last one was the best because they said I was not COVID impacted, but in all honesty who is not impacted by COVID? I have just been lucky so far not to get [COVID] because I wear a mask and take this situation very seriously because I am in the risky part of the population.

The top three ways that respondents indicated learning about health and social services was the internet (37%), followed by doctors (30%) and community organizations (27%).

Figure 97: Percent of Responses to "How do you learn about or get information about health and social services that you may need? Choose ALL that apply."

Other responses included the following:

- Kindoo Family Center
- Family members/ Parents
- United Way
- Referrals from friends who are medical professionals
- Employee assistance program
- No information available
- Referrals from people I know and recommendations from neighborhood webpage.
- Insurance and insurance website
- Google

When asked "how healthy is your community," half of respondents said somewhat healthy followed by healthy (36%).

Figure 98: Percent of Responses to "How healthy is your community? Choose one."

Over half of respondents said their community was a good place to live because of low crime/safe neighborhoods (69%), good place to raise children (64%), good schools/education (61%), good place to grow old (58%), and parks & recreation (52%).

Figure 99: Percent of Responses to "What makes your community a good place to live? Choose ALL that apply."

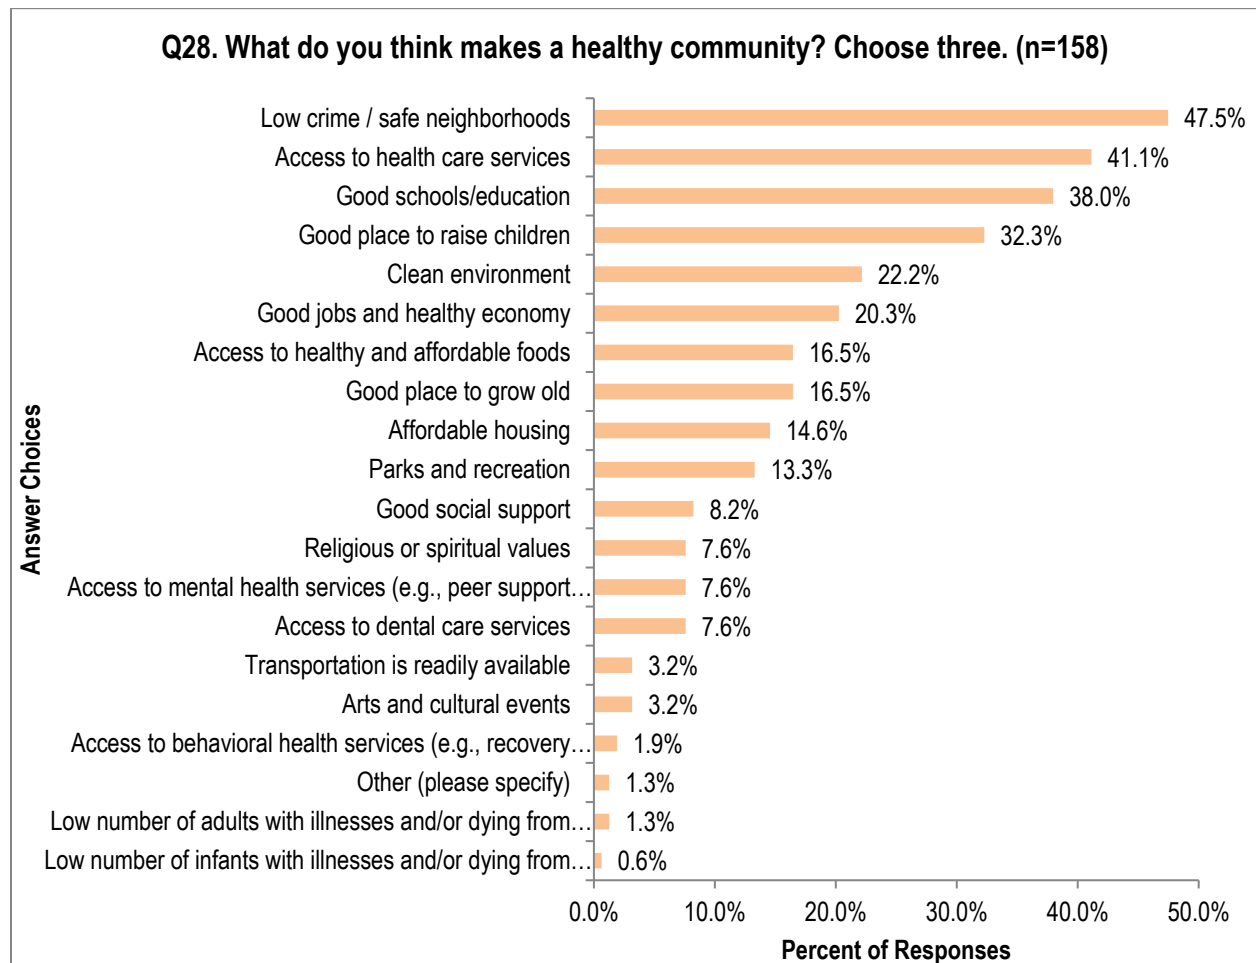

Other responses included the following:

- None of these things are readily available in Indiantown. You must travel.
- Community is in great need of ALL services
- Was going to select affordable housing but it's becoming unaffordable.
- My community in Stuart is unfortunately not a very good one, I am in bad health and cannot seek medical care due to a lack of insurance. Above all the County decide to rescind the mask requirement and open up schools despite there still being an upward trend of Coronavirus. Instead of being a real community, the commissioners turned this virus into a partisan issue to appease the large majority of conservatives who live here. Do better.
- Buen gobierno y regulaciones (good government and regulations)
- Beachfront and dog friendly
- Martin County used to be a great place to live. Unfortunately, there has been way too much growth and development in our community
- Great community support
- I love Martin County. I have been coming/living here since 1953
- Small size makes it comparatively easy to drive around. Please limit growth.
- Ease of commute. [It is] close to shopping and downtown

When asked to select what makes a healthy community, the top three responses were low crime/safe neighborhoods (48%), access to health care services (41%) and good schools/education (38%).

Figure 100: Percent of Responses to "What do you think makes a healthy community? Choose three."

Other responses included the following:

- I want good jobs available, good schooling to groom our kids, affordable housing, affordable goods and services. Mental health services are HARD to come by, and we have never needed them accessible more than we do now.
- I live in a community that has strict rules and provides testing for COVID.

The top three most common health issues selected by respondents was aging problems (50%), diabetes (32%) and mental health (29%).

Figure 101: Percent of Responses to "What are the three most common health related problems that you see in your community?"

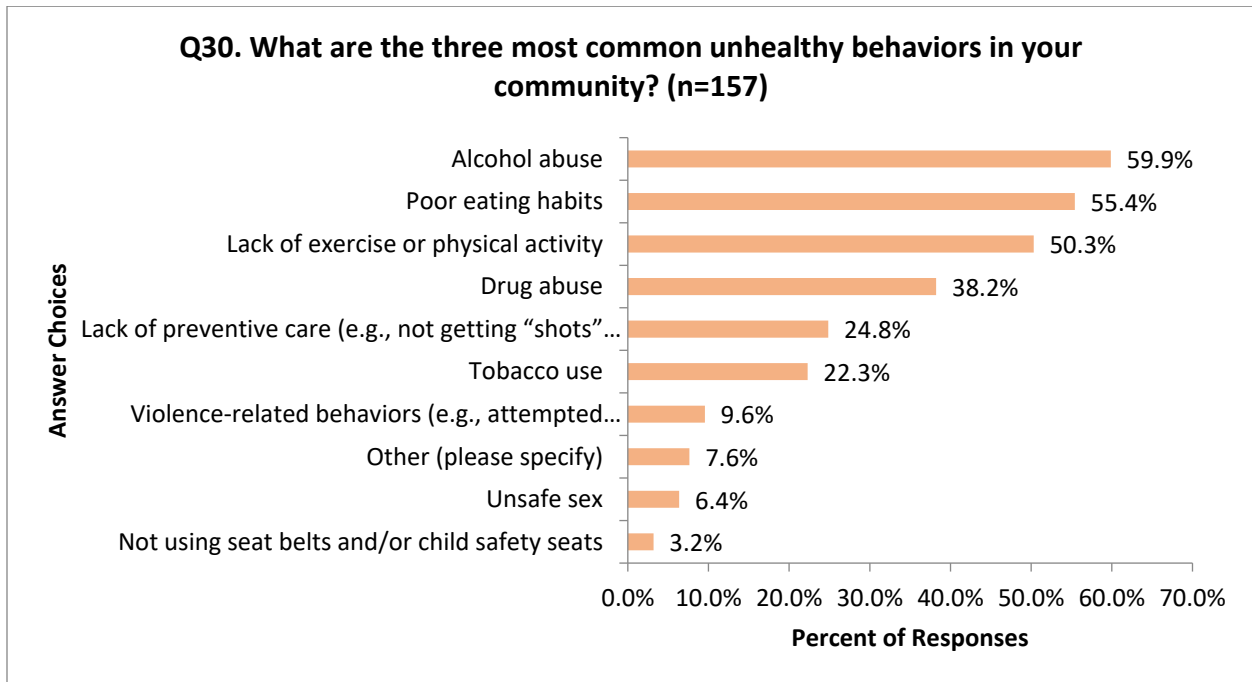

Other responses included:

- Obesity (4)
- COVID-19 (2)
- Generally poor health among all ages, without adequate affordable services available.
- I moved here last year, so because of COVID I have been in isolation for a very long time. Isolation takes a toll on a person mentally. I have had very few social interactions except with neighbors and with keeping distance it is not as comforting as having a close friend to do things with. I have been pretty home sick for my friends back up North.
- Environmental impacts (algae outbreaks, climate change)

The top three unhealthy behaviors in the community selected by respondents were alcohol abuse (60%), poor eating habits (55%) and lack of exercises or physical activity (50%).

Figure 102: Percent of Responses to "What are the three most common unhealthy behaviors in your community?"

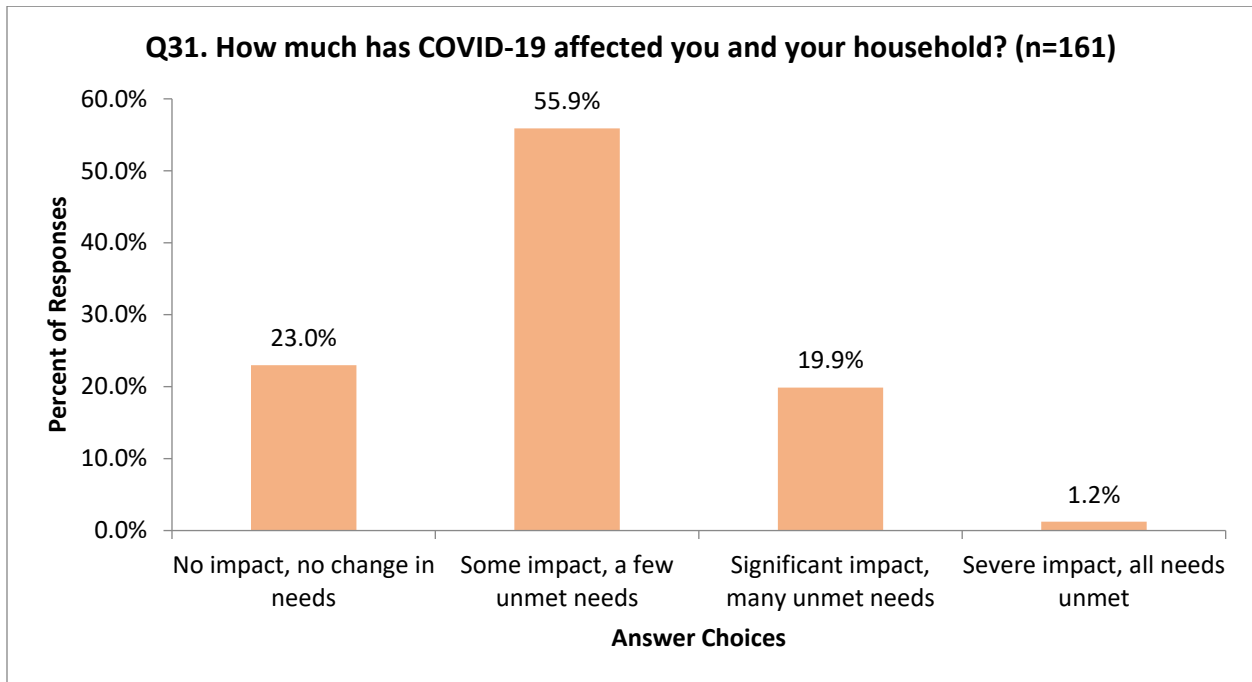

Other responses included the following:

- Obesity
- Improper or non-use of masks by restaurant workers
- Helping people who are depressed or threatening suicide - kids and adults.
- Refusing to wear masks & socially distance etc. during COVID. Please keep mask mandate in place!
- We live in a well-educated, healthy community so I see nothing more of impact other than people who don't work out.
- I must live in a bubble because I can't choose three from these choices, at least not for my immediate surroundings in Palm City. Our parks are full, I don't know anyone who smokes, my neighborhood has little to no crime and people generally seem happy. Other than the frustrations generated by politics and COVID, people are civil most of the time. I think Palm City is as close to ideal as it comes, especially for retirees.
- Homeless

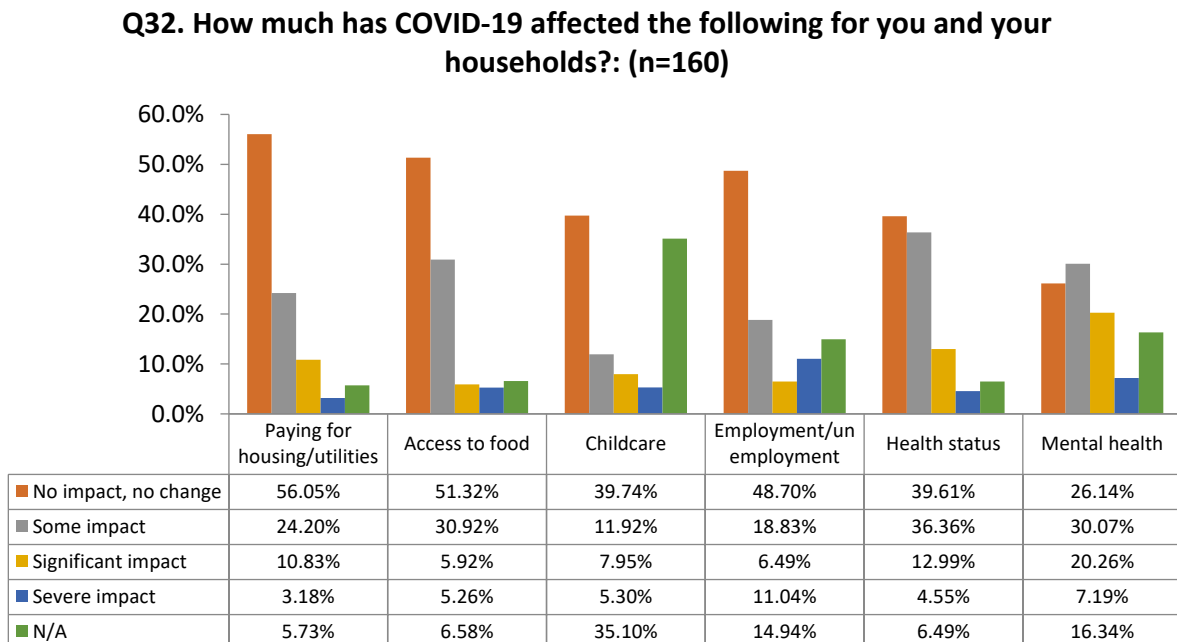

Over half of respondents reported some impact, a few unmet needs due to COVID-19, 20% reported significant impact, many unmet needs and 1% reported severe impact, all needs unmet.

Figure 103: Percent of Responses to "How much has COVID-19 affected you and your household?"

Among respondents, 11% reported severe impact on employment/unemployment, followed by mental health (7%). One-fifth of respondents reported significant impact on mental health, followed by health status. Thirty-six percent of respondents reported some impact on health status, followed by access to food (30%) and mental health (30%).

Figure 104: Percent of Responses to "How much has COVID-19 affected the following for you and your household?"

The primary concern among respondents due to COVID-19 was health/safety, followed by mental health (17%)

Figure 105: Percent of Responses to "Due to COVID-19, what is your primary concern AT THIS TIME?"

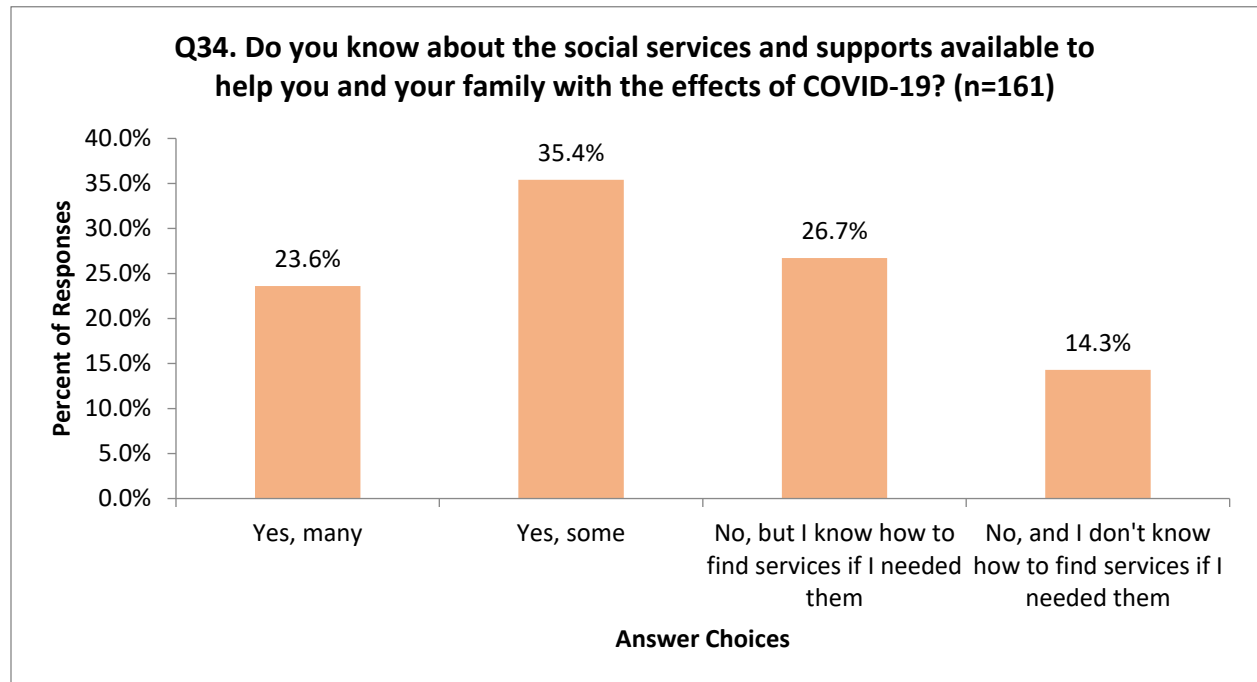

Other responses included the following:

- Compliance with COVID-19 guidelines by residents, businesses and government (6)
- Finances (2)
- Food/nutrition and Health/Safety
- Multiple concerns
- I work with seniors but also care for my parents. It's a tremendous strain as I continue to work daily. I am so thankful for my job but the stress is very difficult and the worries are endless.
- Isolation among the elderly
- While I work in an industry that should be able to weather the storm, I am also a white-collar worker and 65. So my biggest concern is that they are going to find a way to retire me. And I'm not ready financially.
- Mental health of my children not being allowed to give hugs and socialize with peers. Becoming accustomed to wearing masks as the normal. Living as if we are a 3rd world country.
- The future of our economy, locally and nationally
- Individual's failures to be accountable for their own situation and instead supporting mask mandates and combative interactions in the name of virtue signaling.

Fourteen percent of respondents reported not knowing about social services and supports available to help them and their family and not knowing how to find services.

Figure 106: Percent of Responses to "Do you know about the social services and supports available to help you and your family with the effects of COVID-19?"

Sixty-seven respondents shared a short response to the question "How has COVID-19 affected your family?" HCSEF staff analyzed these responses for key theme. These key themes are listed below:

- There was a general feeling that COVID-19 had an impact on the community, highlighted by the amount of residents who were generally concerned for community safety
 - Quote: "I think every community has probably had some impact because of social gatherings, but some more because of what it has access to as in food, health and employment."
- One of the larger topics of concern was the economy. Of those who were worried about the economy, many were concerned with job loss.
- Another area of great concern was mental health. The biggest mental health issue was social isolation.
 - Quote: "La isolacion de gente ha sida muy peligroso para muchas. Todos vivimos con miedo de contagioso con el virus. (The isolation of people has been very dangerous for many. We all live in fear of being contagious with the virus.)"
- Residents were also worried about COVID becoming a political issue.
 - Quote: "Perfect strangers argue more often due to their disagreements on how to handle masks as well as disagreements about politics."
 - Quote: "Divided families, friendships, workplaces, and general society."

KEY INFORMANT INTERVIEWS

The Health Council of Southeast Florida conducted 17 interviews with key community stakeholders and members in 2020. The purpose was to collect first-hand information from a wide range of community leaders who have expertise about the county, its residents and its resources. The individuals selected for the interviews included leaders, representatives, or members of medically underserved, low-income and minority populations, as well as funders, and leaders of community organizations. Their particular knowledge and understanding can provide insight on the nature of problems and give recommendations for solutions and future planning.

METHODOLOGY

The Health Council of Southeast Florida (HCSEF) developed protocols, scripts and questions for key informant interviews. Interview appointments were scheduled and each interview was conducted by a trained facilitator via telephone. The interviews lasted on average 30-45 minutes. Prior to beginning the interview, the facilitator provided an overview of the process and assured the confidentiality of all comments, names and other identifying information during reporting. A total of fourteen questions were asked and probes were used to clarify information and glean additional insight. Communities across the country experienced significant disruption due to the COVID-19 pandemic. As a result, two specific COVID-19 related questions were added to the set of questions.

RESULTS

Seventeen key informant interviews were conducted throughout 2020. The following information are the common themes that emerged during the key informant interviews.

Key Health Issues

- Mental health
 - Stress
 - Anxiety
 - Trauma
 - Depression
 - Isolation
- Chronic diseases
 - Heart disease and hypertension
 - Diabetes
- Obesity
- Poor nutrition and diet
- Oral Health
- Substance abuse
- Alcohol abuse
- Heroin and drug addiction
- Maternal and child health

Key Social Determinants of Health Issues

- Poverty
- Racism
- Housing
- Transportation

Populations with Unmet Needs

- Children/teens
- Non-English speaking/undocumented
- Low income residents
- Uneducated
- Minority populations
- Uninsured and Underinsured
- Elderly

Community Strengths/Assets

- Strong sense of community
- Hospitals
- Clinics and Safety Net Providers
 - State and local county government (Department of Health, HHS etc...)
- Non-profit organizations
- Faith-based institutions
- Libraries
- Outdoor recreation spaces
 - parks, trails, beaches, sidewalks, playgrounds
- Wealthy and giving community

Opportunities for Improvement

- Listen and engage the community more
- Bring services to all parts of the county
- Education (culturally and linguistically specific)
 - Prevention
 - Healthy lifestyle
 - Navigation of health care system
- Increasing the awareness of resources in the community
- Increasing collaboration and coordination between community organizations and agencies

Challenges and Barriers in Maintaining Health

- Lack of representation of Black, Indigenous and People of Color
- Lack of trust within minority communities
- Lack of awareness of programs and services
- Lack of health education
- Lack of health care access
 - Providers do not accept (certain types of) health insurance (i.e. Medicare and Medicaid)
 - Shortage of certain medical providers (i.e. dentists, mental health providers, specialists)
 - Lengthy wait times
- Lack of health care coverage
- Sedentary
- Anxiety and depression
- Transportation
- Lack of focus and interest on prevention
- Limited access to resources to maintain healthy lifestyle
 - Healthy foods
- Language barriers
- Duplication of services
- Local elected leaders not following COVID-19 science

Suggestions

- Educate and engage the community
- Partner with the local community-based organizations
- Focus on prevention and early Identification

Emerging Concerns Due to COVID-19

- Increased poverty
- Funding cuts at all levels
- Donor fatigue
- Increased vaccine hesitancy resulting in more infectious diseases
- COVID-19 complications
- Unstable social service safety-net
- Loss of wages

COMMUNITY FOCUS GROUPS

The Health Council of Southeast Florida conducted focus groups during November 2020 to obtain insight and knowledge from the residents of Martin County. The goal of each focus group discussion was to understand the experiences and unique needs of the community and its residents with an emphasis on health issues and health services. The following section outlines the focus group methodology and provides a summary of the common themes identified throughout the discussions.

METHODOLOGY

The Health Council of Southeast Florida (HCSEF) has developed and fine-tuned protocols and questions for community focus groups. A total of twelve questions were asked and probes were used to clarify information and glean additional insight. The COVID-19 pandemic significantly impacted the health and wellbeing of residents across the county therefore two specific COVID-19 related questions were added to the set of questions. Local community organizations aided in the recruitment of participants across the county with an emphasis on the aging population, minority population and low-income residents. To adhere to COVID-19 social distancing guidelines, HCSEF facilitated three focus groups virtually via Zoom. HCSEF provided a dial-in number to accommodate residents that did not have access to the internet or a Zoom compatible device.

Prior to starting each focus group, participants were given a demographic questionnaire to complete. Assistance was provided to individuals requiring it. In order to incentivize the process, HCSEF provided gift cards to all individuals that participated.

Each of the three focus groups had between 5 to 6 participants. The groups had concrete questions and probes to utilize if they were needed to further the discussion and lasted approximately 60 to 90 minutes. The participants were assured that no names would be included in the summarization of answers. Only common themes expressed by participants from across different focus groups were included in this report. Thus not everything said in the groups were included in the summary.

The following tables depict the information collected from the demographic questionnaires.

Table 208: Focus Group Participants by Gender

Gender	# of Participants	% of Participants
Female	15	83.3%
Male	3	16.7%
Transgender	0	0.0%
No Response	0	0.0%
Total	18	100.0%

Table 209: Focus Group Participants by Age

Age Group	# of Participants	% of Participants
0-18 years	3	16.7%
19-24 years	0	0.0%
25-44 years	6	33.3%
45-64 years	2	11.1%
65-84 years	4	22.2%
85+ years	0	0.0%
No Response	0	0.0%
Total	18	100.0%

Table 210: Focus Group Participants by Race

Race	# of Participants	% of Participants
American Indian, Alaskan Native, or Indigenous	0	0.0%
Asian	0	0.0%
Black or African American	5	27.8%
Native Hawaiian or Other Pacific Islander	0	0.0%
White/Caucasian	11	61.1%
Two or more races	0	0.0%
Other	0	0.0%
No Response	2	11.1%
Total	18	100.0%

Table 211: Focus Group Participants by Ethnicity

Ethnicity	# of Participants	% of Participants
Hispanic or Latino	7	38.9%
Non-Hispanic or Non-Latino	11	61.1%
No Response	0	0.0%
Total	18	100.0%

Table 212: Focus Group Participants by Educational Attainment

Educational Attainment	# of Participants	% of Participants
Associate degree	0	0.0%
Bachelor's Degree	1	5.6%
Doctorate	3	16.7%
High school diploma or equivalent	6	33.3%
Less than a high school diploma	1	5.6%
Master's degree	0	0.0%
Some college, no degree	7	38.9%
Technical school	0	0.0%
No Response	0	0.0%
Total	18	100.0%

Table 213: Focus Group Participants by Income

Annual Income	# of Participants	% of Participants
Less than \$10,000	4	22.2%
\$10,000 to \$19,999	1	5.6%
\$20,000 to \$34,999	5	27.8%
\$35,000 to \$49,999	3	16.7%
\$50,000 to \$74,999	2	11.1%
\$75,000 to \$99,999	0	0.0%

Palm City	2	11.1%
Port Salerno	0	0.0%
Stuart	13	72.2%
Sewall's Point	0	0.0%
Homeless	0	0.0%
No Reponse	0	0.0%
Total	18	100.0%

RESULTS

Three focus groups were conducted with a total of 18 participants. Twelve questions were asked to focus group participants beginning with questions related to overall quality of life in the community and the impact of COVID-19. In addition, probes were utilized to clarify responses and glean additional information. The following information are the common themes that emerged during the focus groups with relation to the community, health services and the health care system.

Vision for a Healthy Martin County

- Drug-free Community
- Access to resources and services
- Clean community
- Acceptance of and a good relationship between all cultures, races and religions

Community Strengths in Martin County

- Community Libraries (programs and Wifi access)
- Lots of non-profits serving residents in need
 - Volunteers in Medicine
 - Healthy Start
 - House of Hope
 - LAHIA
- Support Groups (for mental health and post-partum mothers)
- Healthy schools

Opportunities to Build Upon

- Resource for homeless population (e.g., housing and mental health treatment)
- Rent assistance and affordable housing to address expensive rent
- Better transportation services for Indiantown residents, senior and parents

Key Health Issues

- Diabetes
- Obesity
- Heart conditions (e.g., stroke, high blood pressure...etc.)
- Alcohol and drug abuse

Cause of Key Health Issues

- Low wages
- Stress of providing for family among low-income families
- Not having the money to pay for
- Need for adult and pediatric dentist
 - East Stuart area

Vulnerable Populations

- Hispanic and African American community
- Non-English speakers
- Low-income adults and children

“People of color are treated more poorly by health care providers compared to White counterparts.” - Focus Group Participant

Challenges in Maintaining Health

- Cost of medical care and services
- Availability and cost of health foods
- Life stressors

“It’s hard to maintain when you have so many small contributing factors; if it’s not one thing it’s the other” - Focus Group Participant

Support needed by residents

- Community support groups
- Door to door canvassing in multiple languages (e.g., Mayan dialect, Creole and Spanish)
- Counseling services for adults and children

Community engagement opportunities

- Go out into the community and meet residents where they are
- Agencies and residents actively working together

“I do not think anyone really wants a handout. That is where dignity and respect comes in, so they feel a part of and not just having a handout.”

Impact on COVID-19 on Residents

- Anxiety and fear
- Unemployment and/ or unable to work (due to COVID-19, business downsizing, or lack of child care)
- Isolation due to lack of socialization
- Hospitalization and/or death due to COVID

Impact of COVID-19 on access to services

- Increase use of telehealth services (positive & negative)
- Delaying medical appointments, treatment and assessments

LOCAL PUBLIC HEALTH SYSTEM ASSESSMENT

INTRODUCTION

In December of 2019, the Florida Department of Health in Martin County (DOH-Martin) began the process of assessing the public health system in Martin County.

This Local Public Health System Assessment (LPHSA) is one of the four assessments in Phase III Mobilizing for Action through Planning and Partnerships (MAPP) framework. DOH-Martin retained the Health Council of Southeast Florida to assist with the facilitation of the LPHSA process of gathering and analyzing information from community partners. This report is developed from the qualitative, primary data obtained directly from internal and external community stakeholders. These stakeholders represent a broad variety of agencies, providers, and community members in the county.

The results of this assessment seek to identify and improve the overall health and well-being of the residents of Martin County. The role of HCSEF in the community assessment is to collect and interpret data and present the results as a part of the overall community health assessment. The recommendations in this report offer guidance on opportunities for improvement of the local public health system in Martin County.

BACKGROUND

The National Public Health Performance Standards (NPHPS) were developed by the Centers for Disease Control and Prevention (CDC), American Public Health Association (APHA), Association of State and Territorial Health Officials (ASTHO), National Association of County and City Health Officials (NACCHO), National Association of Local Boards of Health (NALBOH), National Network of Public Health Institutes (NNPHI) and the Public Health Foundation (PHF). This collaborative effort by these agencies is intended to improve the practice of public health and the performance of public health systems.

The NPHPS assessment instruments are used to guide state and local jurisdictions in evaluating the performance of their public health systems against a set of optimal or model standards. NPHPS assessments help answer questions such as "What are the components, activities, competencies, and capacities of our public health system?" and "How well are the ten Essential Public Health Services being provided in our system?" The information obtained from conducting these assessments provides a better understanding of how the local public health system and governing entities perform.

PURPOSE

The primary purpose of the NPHPS Local Public Health System Assessment Report is to promote continuous improvement that will result in positive outcomes for system performance. This assessment was used by HCSEF as a working tool to:

- Better understand current system functioning and performance;
- Identify and prioritize areas of strengths, weaknesses, and opportunities for improvement;
- Articulate the value that quality improvement initiatives will bring to the public health system;
- Develop an initial work plan with specific quality improvement strategies to achieve goals;
- Begin taking action for achieving performance and quality improvement in one or more targeted areas; and
- Re-assess the progress of improvement efforts at regular intervals

METHODOLOGY

The LPHSA was conducted over the course of two meetings. On December 3, 2019, twenty-four internal stakeholders of the local health department gathered together to assess essential services 1, 2, 5, 6 and 10. On January 31, 2020, 74 external stakeholders and 22 members of the local health department assessed essential services 3, 4, 7, 8 and 9.

Figure 107: External Stakeholder Meeting, Local Public Health System Assessment, January 2020

HCSEF facilitated the LPHSA by engaging representatives from diverse sectors of the local public health system in Martin County, including first responders, elected officials, faith-based organizations and community-based organizations. Stakeholders were asked to evaluate the performance of Martin County’s local public health system in each of the 10 Essential Public Health Services (EPHS).

The Ten Essential Public Health Services

1. Monitor Health Status to Identify Community Health Problems
2. Diagnose and Investigate Health Problems and Health Hazards in the Community
3. Inform, Educate, and Empower People about Health Issues
4. Mobilize Community Partnerships to Identify and Solve Health Problems
5. Develop Policies and Plans that Support Individual and Community Health Efforts
6. Enforce Laws and Regulations that Protect Health and Ensure Safety
7. Link People to Needed Personal Health Services and Assure the Provision of Health Care when Otherwise Unavailable
8. Assure a Competent Public and Personal Health Care Workforce
9. Evaluate Effectiveness, Accessibility, and Quality of Personal and Population-Based Health Services
10. Research for New Insights and Innovative Solutions to Health Problems

In each meeting for the LPHSA, HCSEF gave an overview of the EPHS, and the purpose of completing the assessment. Attendees engaged in discussion, facilitated by the HCSEF staff, assessing the local public health system’s current level of activity, in comparison to the specific performance measures detailed by each model standard. Participants then rated the LPHS’s performance of each model standard using a nominal scale, in which 0% is no activity and 100% is maximum activity. Participants’ votes on these model standards were gathered using portable electronic keypads. Results, captured in real-time, were displayed instantly after each vote. In the event of a tie, participants discussed the performance measure in order to reach a consensus.

The table below shows the response options participants were given.

Table 217: Summary Of Performance Measures Response Options

Optimal Activity (76-100%)	Greater than 75% of the activity described within the question is met.
Significant Activity (51-75%)	Greater than 50%, but no more than 75% of the activity described within the question is met.
Moderate Activity (26-50%)	Greater than 25%, but no more than 50% of the activity described within the question is met.
Minimal Activity (1-25%)	Greater than zero, but no more than 25% of the activity described within the question is met.
No Activity (0%)	0% or absolutely no activity.

 Compiled by: Health Council of Southeast Florida, 2020

DATA LIMITATIONS

Community health partners must understand the potential data limitations associated with this assessment process and how to appropriately interpret the assessment results to effectively evaluate and improve the local public health system. While these scores provide an overarching view of the strengths and weaknesses of the Martin County public health system, caution should be exercised when reviewing them. A low-performance score may not necessarily indicate that improvement is warranted, nor does a high score indicate that there is no need for improvement. These scores are provided as guidelines. Stakeholders and partners should review and discuss these scores to effectively identify strategies for improvement.

The assessment utilizes input from a diverse set of stakeholders that comprise the local public health system. Each stakeholder contributes a unique perspective, experience, and set of expertise. Therefore, this process of information gathering incorporates an element of subjectivity and bias. These limitations can be minimized through the use of particular assessment methods; however, the assessment methods are not fully standardized and these differences may introduce an element of measurement error. Due to these inherent limitations, the results below and associated recommendations should be used only for quality and performance improvement purposes and should not be interpreted to reflect the capacity or performance of any single agency or organization.

RESULTS

The Local Public Health System Assessment asks the question: “How well did the local public health system perform the ten Essential Public Health Services?” The figure below provides a high-level snapshot of the local public health system’s overall level of performance. Almost 80% of the Essential Services were significantly (70%) or optimally (10%) met by the LPHS. However, there are still opportunities for improvement with the LPHS performing at a moderate activity or less for 20% of the Essential Services.

Figure 108: Percentage of the System's Essential Services Scores that Fall within the Five Activity Categories

Table 218: Overall Performance Scores by Essential Service

Essential Services	Performance Scores
ES 1: Monitor Health Status	55.6
ES 2: Diagnose and Investigate	76.4
ES 3: Educate/Empower	61.1
ES 4: Mobilize Partnerships	64.6
ES 5: Develop Policies/Plans	75.0
ES 6: Enforce Laws	71.5
ES 7: Link to Health Services	50.0
ES 8: Assure Workforce	70.8
ES 9: Evaluate Services	67.1
ES 10: Research/Innovations	38.9
Average Overall Score	63.1
Median Score	65.8

Source: Martin County Local Public Health System Assessment Report, 2020
 Compiled by: Health Council of Southeast Florida, 2020

The table above and the figure below highlight the average score for each of the ten essential services. Examination of these overall scores can show the LPHS's strengths and areas for improvement. When compared to the National Standards, the LPHS self-assessed as performing less than fifty-one percent of the model standards for Essential Service 7 (Link to Health Services) and 10 (Research/Innovations). This may indicate that there is an opportunity for the Martin County public health system to improve on linking residents to health services in Martin County as well as engaging in research opportunities. The black bars on the figure below indicate the range of performance score responses within each Essential Service.

Figure 109: Summary of Average Essential Performance Score

PERFORMANCE ASSESSMENT INSTRUMENT RESULTS

The following section highlights the average performance score for each Model Standard performance question. This level of analysis allows the LPHS to determine which specific activities contribute to the high or low performance of the EPHS. The collective scores for the model standards under each Essential Service are provided, along with the strengths and opportunities improvement within the system, as described by stakeholders during the assessment process.

Essential Service 1: Monitor Health Status to Identify Community Health Problems

The Local Public Health System Strengths in this area were:

- Organizations from a variety of sectors are involved in the Community Health Assessment (CHA) process and promote it
- The CHA is regularly conducted every five-years and updated with current information continuously
- Use of GIS mapping
- The Health Department effectively collects timely data that is integrated into the public health registries
- The Health Department has high volume lab capabilities that are used for surveillance activities

Overall, according to the assessment, the LPHS does significant activity to meet the performance standards in this area, but indicated the following areas as opportunities to improve:

- House the CHA on partner organization's websites
- Integrate the CHA into the strategic plan of partner agencies
- Align the CHA process with other CHAs conducted in the community

Table 219: Summary of Performance Measures Public Health Essential Service 1

ESSENTIAL SERVICE 1: Monitor Health Status to Identify Community Health Problems							
1.1	Model Standard:	Population-Based	Community	Health	Assessment	(CHA)	
	<i>At what level does the local public health system:</i>						
1.1.1	Conduct regular community health assessments?						75
1.1.2	Continuously update the community health assessment with current information?						75
1.1.3	Promote the use of the community health assessment among community members and partners?						50
1.2	Model Standard:	Current Technology	to Manage	and Communicate	Population Health	Data	
	<i>At what level does the local public health system:</i>						
1.2.1	Use the best available technology and methods to display data on the public's health?						50
1.2.2	Analyze health data, including geographic information, to see where health problems exist?						50
1.2.3	Use computer software to create charts, graphs, and maps to display complex public health data (trends over time, sub-population analyses, etc.)?						50
1.3	Model Standard:	Maintenance	of	Population	Health	Registries	
	<i>At what level does the local public health system:</i>						
1.3.1	Collect data on specific health concerns to provide the data to population health registries in a timely manner, consistent with current standards?						50
1.3.2	Use information from population health registries in community health assessments or other analyses?						50

Source: Martin County Local Public Health System Assessment Report, 2020
 Compiled by: Health Council of Southeast Florida, 2020

Essential Service 2: Diagnose and Investigate Health Problems and Health Hazards

The Local Public Health System Strengths in this area were:

- DOH has a comprehensive surveillance system with national and state partners.
- DOH has a designated Emergency Response coordinator
- Regional lab epidemiologists are available 24/7
- All relevant DOH staff are trained on lab protocols

Overall, according to the assessment, the LPHS does optimally meeting the performance measures in this area, but indicated the following areas as opportunities to improve:

- Educate staff on who the Emergency Response Coordinator is and what their role entails
- Create opportunities to showcase what goes into outbreak alerts or changes happening in the health system
- Reintroduce publications similar to the surveillance report

Table 220: Summary of Performance Measures Public Health Essential Service 2

ESSENTIAL SERVICE 2: Diagnose and Investigate Health Problems and Health Hazards		
2.1	Model Standard: Identification and Surveillance of Health Threats <i>At what level does the local public health system:</i>	
2.1.1	Participate in a comprehensive surveillance system with national, state and local partners to identify, monitor, share information, and understand emerging health problems and threats?	75
2.1.2	Provide and collect timely and complete information on reportable diseases and potential disasters, emergencies and emerging threats (natural and manmade)?	75
2.1.3	Assure that the best available resources are used to support surveillance systems and activities, including information technology, communication systems, and professional expertise?	75
2.2	Model Standard: Investigation and Response to Public Health Threats and Emergencies <i>At what level does the local public health system:</i>	
2.2.1	Maintain written instructions on how to handle communicable disease outbreaks and toxic exposure incidents, including details about case finding, contact tracing, and source identification and containment?	75
2.2.2	Develop written rules to follow in the immediate investigation of public health threats and emergencies, including natural and intentional disasters?	50
2.2.3	Designate a jurisdictional Emergency Response Coordinator?	75
2.2.4	Prepare to rapidly respond to public health emergencies according to emergency operations coordination guidelines?	75
2.2.5	Identify personnel with the technical expertise to rapidly respond to possible biological, chemical, or and nuclear public health emergencies?	50
2.2.6	Evaluate incidents for effectiveness and opportunities for improvement?	75
2.3	Model Standard: Laboratory Support for Investigation of Health Threats <i>At what level does the local public health system:</i>	
2.3.1	Have ready access to laboratories that can meet routine public health needs for finding out what health problems are occurring?	75
2.3.2	Maintain constant (24/7) access to laboratories that can meet public health needs during emergencies, threats, and other hazards?	75
2.3.3	Use only licensed or credentialed laboratories?	100
2.3.4	Maintain a written list of rules related to laboratories, for handling samples (collecting, labeling, storing, transporting, and delivering), for determining who is in charge of the samples at what point, and for reporting the results?	100

Source: Martin County Local Public Health System Assessment Report, 2020
 Compiled by: Health Council of Southeast Florida, 2020

Essential Service 3: Inform, Educate, and Empower People about Health Issues

The Local Public Health System Strengths in this area were:

- Optimal activity with engaging current populations

Overall, according to the assessment, the LPHS does significant activity to meet the performance measures in this area, but indicated the following areas as opportunities to improve:

- Have community members as spokespeople
- Teach residents how to access resources online or on their phone in their language
- Improve the approach and method of communication to populations that truly need to be reached

Table 221: Summary of Performance Measures Public Health Essential Service 3

ESSENTIAL SERVICE 3: Inform, Educate, and Empower People about Health Issues		
3.1	Model Standard:	Health Education and Promotion
<i>At what level does the local public health system:</i>		
3.1.1	Provide policymakers, stakeholders, and the public with ongoing analyses of community health status and related recommendations for health promotion policies?	75
3.1.2	Coordinate health promotion and health education activities to reach individual, interpersonal, community, and societal levels?	50
3.1.3	Engage the community throughout the process of setting priorities, developing plans and implementing health education and health promotion activities?	50
3.2	Model Standard:	Health Communication
<i>At what level does the local public health system:</i>		
3.2.1	Develop health communication plans for relating to media and the public and for sharing information among LPHS organizations?	75
3.2.2	Use relationships with different media providers (e.g. print, radio, television, and the internet) to share health information, matching the message with the target audience?	50
3.2.3	Identify and train spokespersons on public health issues?	50
3.3	Model Standard:	Risk Communication
<i>At what level does the local public health system:</i>		
3.3.1	Develop an emergency communications plan for each stage of an emergency to allow for the effective dissemination of information?	75
3.3.2	Make sure resources are available for a rapid emergency communication response?	75
3.3.3	Provide risk communication training for employees and volunteers?	50

Source: Martin County Local Public Health System Assessment Report, 2020
 Compiled by: Health Council of Southeast Florida, 2020

Essential Service 4: Mobilize Community Partnerships to Identify and Solve Health Problems

The Local Public Health System Strengths in this area were:

- Collaboration; for example, the collaborative efforts throughout the Martin County Advisory Council

Overall, according to the assessment, the LPHS does a significant job meeting the performance measures in this area, but indicated the following areas as opportunities to improve:

- Create a network of the Local Public Health System Assessment attendees.
- Disseminate information to people who are not directly involved in the network so that those who want to participate can.
- Use of listservs to compile information for mass sharing; directory of stakeholders.
- Have residents share their lived and learned experiences with each other.

Table 222: Summary of Performance Measures Public Health Essential Service 4

ESSENTIAL SERVICE 4: Mobilize Community Partnerships to Identify and Solve Health Problems					
4.1	Model	Standard:	Constituency	Development	
	At what level does the local public health system:				
4.1.1	Maintain a complete and current directory of community organizations?				75
4.1.2	Follow an established process for identifying key constituents related to overall public health interests and particular health concerns?				75
4.1.3	Encourage constituents to participate in activities to improve community health?				50
4.1.4	Create forums for communication of public health issues?				50
4.2	Model	Standard:	Community	Partnerships	
	At what level does the local public health system:				
4.2.1	Establish community partnerships and strategic alliances to provide a comprehensive approach to improving health in the community?				75
4.2.2	Establish a broad-based community health improvement committee?				75
4.2.3	Assess how well community partnerships and strategic alliances are working to improve community health?				50

Source: Martin County Local Public Health System Assessment Report, 2020
 Compiled by: Health Council of Southeast Florida, 2020

Essential Service 5: Develop Policies and Plans that Support Individual and Community Health Efforts

The Local Public Health System Strengths in this area were:

- The local health department is accredited through the Public Health Accreditation Board
- The health department's Public Information Officer meets with County Commissioners especially when there are public health issue.
- The local health department is on call to provide information to local tasks forces they are a part of

Overall, according to the assessment, the LPHS does significant activity to meet the performance measure in this area, but indicated the following area as an opportunity to improve:

- Memorandums of Agreement (MOAs) to help better inform how policies may be made

Table 223: Summary of Performance Measures Public Health Essential Service 5

ESSENTIAL SERVICE 5: Develop Policies and Plans that Support Individual and Community Health Efforts		
5.1	Model Standard: Governmental Presence at the Local Level <i>At what level does the local public health system:</i>	
5.1.1	Support the work of a local health department dedicated to the public health to make sure the essential public health services are provided?	50
5.1.2	See that the local health department is accredited through the national voluntary accreditation program?	100
5.1.3	Assure that the local health department has enough resources to do its part in providing essential public health services?	50
5.2	Model Standard: Public Health Policy Development <i>At what level does the local public health system:</i>	
5.2.1	Contribute to public health policies by engaging in activities that inform the policy development process?	75
5.2.2	Alert policymakers and the community of the possible public health impacts (both intended and unintended) from current and/or proposed policies?	75
5.2.3	Review existing policies at least every three to five years?	75
5.3	Model Standard: Community Health Improvement Process and Strategic Planning <i>At what level does the local public health system:</i>	
5.3.1	Establish a community health improvement process, with broad-based diverse participation, that uses information from both the community health assessment and the perceptions of community members?	75
5.3.2	Develop strategies to achieve community health improvement objectives, including a description of organizations accountable for specific steps?	75
5.3.3	Connect organizational strategic plans with the Community Health Improvement Plan?	75
5.4	Model Standard: Plan for Public Health Emergencies <i>At what level does the local public health system:</i>	
5.4.1	Support a workgroup to develop and maintain preparedness and response plans?	75
5.4.2	Develop a plan that defines when it would be used, who would do what tasks, what standard operating procedures would be put in place, and what alert and evacuation protocols would be followed?	75
5.4.3	Test the plan through regular drills and revise the plan as needed, at least every two years?	100

 Compiled by: Health Council of Southeast Florida, 2020

Essential Service 6: Enforce Laws and Regulations that Protect Health and Ensure Safety

The Local Public Health System's Strengths in this area were:

- Local health department staff sit on multiple health councils and task forces, which are all related to internal laws and regulations
- The health department provides input and support for local ordinances
- The local health department also helps to provide the data that informs the development of laws.

Overall the LPHS self-assessed that it does a significant job meeting the performance measures in this area, but indicated the following areas as opportunities to improve:

- Provide all health department staff with information regarding legal procedures and availability of legal team

Table 224: Summary of Performance Measures Public Health Essential Service 6

ESSENTIAL SERVICE 6: Enforce Laws and Regulations that Protect Health and Ensure Safety		
6.1	Model Standard: Review and Evaluation of Laws, Regulations, and Ordinances <i>At what level does the local public health system:</i>	
6.1.1	Identify public health issues that can be addressed through laws, regulations, or ordinances?	75
6.1.2	Stay up-to-date with current laws, regulations, and ordinances that prevent, promote, or protect public health on the federal, state, and local levels?	75
6.1.3	Review existing public health laws, regulations, and ordinances at least once every five years?	75
6.1.4	Have access to legal counsel for technical assistance when reviewing laws, regulations, or ordinances?	100
6.2	Model Standard: Involvement in the Improvement of Laws, Regulations, and Ordinances <i>At what level does the local public health system:</i>	
6.2.1	Identify local public health issues that are inadequately addressed in existing laws, regulations, and ordinances?	75
6.2.2	Participate in changing existing laws, regulations, and ordinances, and/or creating new laws, regulations, and ordinances to protect and promote the public health?	50
6.2.3	Provide technical assistance in drafting the language for proposed changes or new laws, regulations, and ordinances?	50
6.3	Model Standard: Enforcement of Laws, Regulations, and Ordinances <i>At what level does the local public health system:</i>	
6.3.1	Identify organizations that have the authority to enforce public health laws, regulations, and ordinances?	75
6.3.2	Assure that a local health department (or other governmental public health entity) has the authority to act in public health emergencies?	75
6.3.3	Assure that all enforcement activities related to public health codes are done within the law?	75
6.3.4	Educate individuals and organizations about relevant laws, regulations, and ordinances?	75
6.3.5	Evaluate how well local organizations comply with public health laws?	75

Source: Martin County Local Public Health System Assessment Report, 2020
 Compiled by: Health Council of Southeast Florida, 2020

Essential Service 7: Link People to Needed Personal Health Services and Assure the Provision of Health Care when Otherwise Unavailable

The Local Public Health System’s Strengths in this area were:

- The LPHS does a good job of identifying the needs of the community.
- Some organizations in the LPHS have Outreach Coordinators and Patient Navigators available.

Overall the LPHS self-assessed that it does moderate activity to meet the performance measures in this area, and indicated the following areas as opportunities to improve:

- Need for pediatric dentistry
- Better communication of services that are available
- Provide transportation to access services
- Streamline the process for people to receive services, i.e. schools and vision screenings

Table 225: Summary of Performance Measures Public Health Essential Service 7

ESSENTIAL SERVICE 7: Link People to Needed Personal Health Services and Assure the Provision of Health Care when Otherwise Unavailable		
7.1	Model Standard: Identification of Personal Health Service Needs of Populations At what level does the local public health system:	
7.1.1	Identify groups of people in the community who have trouble accessing or connecting to personal health services?	50
7.1.2	Identify all personal health service needs and unmet needs throughout the community?	50
7.1.3	Defines partner roles and responsibilities to respond to the unmet needs of the community?	50
7.1.4	Understand the reasons that people do not get the care they need?	50
7.2	Model Standard: Assuring the Linkage of People to Personal Health Services At what level does the local public health system:	
7.2.1	Connect (or link) people to organizations that can provide the personal health services they may need?	50
7.2.2	Help people access personal health services, in a way that takes into account the unique needs of different populations?	50
7.2.3	Help people sign up for public benefits that are available to them (e.g., Medicaid or medical and prescription assistance programs)?	50
7.2.4	Coordinate the delivery of personal health and social services so that everyone has access to the care they need?	50

Source: Martin County Local Public Health System Assessment Report, 2020
Compiled by: Health Council of Southeast Florida, 2020

Essential Service 8: Assure a Competent Public and Personal Health Care Workforce

The Local Public Health System's Strengths in this area were:

- All LPHS staff are appropriately certified, licensed and trained
- The Martin County Interagency Coalition, which many member of LPHS participate in, is offering mini-grants that can be used for training staff of member organizations

Overall the LPHS self-assessed that it does a significant job meeting this standard, but indicated the following areas as opportunities to improve:

- Educate workforce members at all levels on standards and general information
- Need to address biases related to racism and other forms of discrimination systemically
- Alignment of trainings and licensure with the Public Health core competencies

Table 226: Summary of Performance Measures Public Health Essential Service 8

ESSENTIAL SERVICE 8: Assure a Competent Public and Personal Health Care Workforce		
8.1	Model Standard: Workforce Assessment, Planning, and Development <i>At what level does the local public health system:</i>	
8.1.1	Set up a process and a schedule to track the numbers and types of LPHS jobs and the knowledge, skills, and abilities that they require whether those jobs are in the public or private sector?	50
8.1.2	Review the information from the workforce assessment and use it to find and address gaps in the local public health workforce?	50
8.1.3	Provide information from the workforce assessment to other community organizations and groups, including governing bodies and public and private agencies, for use in their organizational planning?	50
8.2	Model Standard: Public Health Workforce Standards <i>At what level does the local public health system:</i>	
8.2.1	Make sure that all members of the public health workforce have the required certificates, licenses, and education needed to fulfill their job duties and meet the law?	100
8.2.2	Develop and maintain job standards and position descriptions based in the core knowledge, skills, and abilities needed to provide the essential public health services?	75
8.2.3	Base the hiring and performance review of members of the public health workforce in public health competencies?	75
8.3	Model Standard: Life-Long Learning through Continuing Education, Training, and Mentoring <i>At what level does the local public health system:</i>	
8.3.1	Identify education and training needs and encourage the workforce to participate in available education and training?	100
8.3.2	Provide ways for workers to develop core skills related to essential public health services?	50
8.3.3	Develop incentives for workforce training, such as tuition reimbursement, time off for class, and pay increases?	75
8.3.4	Create and support collaborations between organizations within the public health system for training and education?	75
8.3.5	Continually train the public health workforce to deliver services in a cultural competent manner and understand social determinants of health?	75
8.4	Model Standard: Public Health Leadership Development <i>At what level does the local public health system:</i>	
8.4.1	Provide access to formal and informal leadership development opportunities for employees at all organizational levels?	50
8.4.2	Create a shared vision of community health and the public health system, welcoming all leaders and community members to work together?	100
8.4.3	Ensure that organizations and individuals have opportunities to provide leadership in areas where they have knowledge, skills, or access to resources?	75
8.4.4	Provide opportunities for the development of leaders representative of the diversity within the community?	75

Essential Service 9: Evaluate Effectiveness, Accessibility, and Quality of Personal and Population-Based Health Services.

The Local Public Health System's Strengths in this area were:

- Many non-profits in Martin County are funded to address identified gaps
- LPHS is good at identifying the gaps, but challenges with closing those gaps

Overall the LPHS self-assessed that it does significant activity to meet the performance measures in this area, but indicated the following areas as opportunities to improve:

- Consistent long-term funding sources to truly create change
- Dental care for adults and children
- Need to move away from the desk and talk to the people to improve plans and services

Table 227: Summary of Performance Measures Public Health Essential Service 9

ESSENTIAL SERVICE 9: Evaluate Effectiveness, Accessibility, and Quality of Personal and Population-Based Health Services		
9.1	Model Standard: Evaluation of Population-Based Health Services <i>At what level does the local public health system:</i>	
9.1.1	Evaluate how well population-based health services are working, including whether the goals that were set for programs were achieved?	75
9.1.2	Assess whether community members, including those with a higher risk of having a health problem, are satisfied with the approaches to preventing disease, illness, and injury?	50
9.1.3	Identify gaps in the provision of population-based health services?	50
9.1.4	Use evaluation findings to improve plans and services?	50
9.2	Model Standard: Evaluation of Personal Health Services <i>At what level does the local public health system:</i>	
9.2.1	Evaluate the accessibility, quality, and effectiveness of personal health services?	75
9.2.2	Compare the quality of personal health services to established guidelines?	75
9.2.3	Measure satisfaction with personal health services?	50
9.2.4	Use technology, like the internet or electronic health records, to improve quality of care?	100
9.2.5	Use evaluation findings to improve services and program delivery?	50
9.3	Model Standard: Evaluation of the Local Public Health System <i>At what level does the local public health system:</i>	
9.3.1	Identify all public, private, and voluntary organizations that provide essential public health services?	75
9.3.2	Evaluate how well LPHS activities meet the needs of the community at least every five years, using guidelines that describe a model LPHS and involving all entities contributing to essential public health services?	75
9.3.3	Assess how well the organizations in the LPHS are communicating, connecting, and coordinating services?	75
9.3.4	Use results from the evaluation process to improve the LPHS?	75

Essential Service 10: Research for New Insights and Innovative Solutions to Health Problems

The Local Public Health System's Strengths in this area were:

- Through the Health Department's equity work, the local college is interested in research with Martin High to understand why there are a lot of Black students dropping out of high school

Overall the LPHS self-assessed that it does a moderate job meeting performance measures in this area, and indicated the following areas as an opportunity to improve:

- Work to increase time and funds for research

Table 228: Summary of Performance Measures, Essential Public Health Service 10

ESSENTIAL SERVICE 10: Research for New Insights and Innovative Solutions to Health Problems		
10.1	Model Standard: Fostering Innovation	
	<i>At what level does the local public health system:</i>	
10.1.1	Provide staff with the time and resources to pilot test or conduct studies to test new solutions to public health problems and see how well they actually work?	50
10.1.2	Suggest ideas about what currently needs to be studied in public health to organizations that do research?	25
10.1.3	Keep up with information from other agencies and organizations at the local, state, and national levels about current best practices in public health?	50
10.1.4	Encourage community participation in research, including deciding what will be studied, conducting research, and in sharing results?	50
10.2	Model Standard: Linkage with Institutions of Higher Learning and/or Research	
	<i>At what level does the local public health system:</i>	
10.2.1	Develop relationships with colleges, universities, or other research organizations, with a free flow of information, to create formal and informal arrangements to work together?	50
10.2.2	Partner with colleges, universities, or other research organizations to do public health research, including community-based participatory research?	50
10.2.3	Encourage colleges, universities, and other research organizations to work together with LPHS organizations to develop projects, including field training and continuing education?	25
10.3	Model Standard: Capacity to Initiate or Participate in Research	
	<i>At what level does the local public health system:</i>	
10.3.1	Collaborate with researchers who offer the knowledge and skills to design and conduct health-related studies?	50
10.3.2	Support research with the necessary infrastructure and resources, including facilities, equipment, databases, information technology, funding, and other resources?	25
10.3.3	Share findings with public health colleagues and the community broadly, through journals, websites, community meetings, etc.?	25
10.3.4	Evaluate public health systems research efforts throughout all stages of work from planning to impact on local public health practice?	25

Source: Martin County Local Public Health System Assessment Report, 2020
 Compiled by: Health Council of Southeast Florida, 2020

The local public health department chose to complete the Agency Contribution assessment, one of the two optional questionnaires of this assessment process. This questionnaire is made available for sites to consider the contribution that the local health department has made to each Model Standard. In September 2020, a digital priority ranking survey was distributed and completed by 18 members of the community health advisory council. The four quadrants in the table below are based on how the performance of each Essential Service and/or Model Standard and compares with the priority rating. The results highlight the recommended areas for attention and next steps to improve the local public health system.

Table 229: Essential Service Model Standard Priority Ranking

Quadrant A	(High Priority and Low Performance) – These activities may need increased attention.
Quadrant B	(High Priority and High Performance) – These activities are being done well, and it is important to maintain efforts.
Quadrant C	(Low Priority and High Performance) – These activities are being done well, consideration may be given to reducing effort in these areas.
Quadrant D	(Low Priority and Low Performance) – These activities could be improved, but are of low priority. They may need little or no attention at this time.

Source: Martin County Local Public Health System Assessment Report, 2020
 Compiled by: Health Council of Southeast Florida, 2020

The figure below shows the 30 model standards by quadrant ranking. The green quadrant in the top right hand corner shows those model standards that were ranked high priority and were given a high performance score, meaning these activities are being done well, and it is important to maintain these efforts in Martin County.

In the blue quadrant, model standard 5.1, 6.1, 8.4 and 9.2 were identified as low priority and high performance. These standards are being performed well within the county, but consideration may be given to reduce an effort in this area, since it is ranked of low priority in the Local Public Health System Assessment.

The pink quadrant on the left represents those activities with low priority and low performance. These activities could improve, however may need little or no attention at this time, since they were assigned a low priority during the LPHSA.

Finally, the yellow quadrant represents those activities that may need increased attention, since they exhibit low performance and high priority. In Martin County, eight of the thirty model standards were placed in this quadrant representing each of the ten essential services.

Figure 110: Priority and Performance Quadrant

Quadrant D	9.1 Evaluation of Population Health	50.0	56.3
Quadrant D	8.1 Workforce Assessment	75.0	50.0
Quadrant D	6.2 Improve Laws	50.0	58.3

The assessment results are promoted by NPHS and are the central focus in the performance improvement plan process. The results in the assessment helps to identify the strengths, weaknesses, areas of concern for performance improvement. The results of this assessment is intended to help drive the planning efforts of local health and human service agencies. Through this assessment, public health leaders can improve collaborations and incorporate changes to the local public health system, making services more effective and efficient based on available resources, and ultimately improve health intervention services.

CONCLUSION

This assessment allowed the chance to identify opportunities for improvement and engage community stakeholders in the improving the overall local public health system. By identifying the organizations, agencies and entities that create the local public health system in Martin County and how the public health system meets the needs of the community residents, a crucial component of the MAPP process could be added to the review of the health issues and needs of community members. With the Health Status Assessment (identifying the health issues of the community through the review of quantitative data from a variety of sources) and the Community Themes and Strengths Assessment (providing community perspective through community focus groups and key informant interviews), the Local Public Health System Assessment (LPHSA) lays the foundation to identify forces that may affect both the public health system in Martin County and the health community residents.

FORCES OF CHANGE ASSESSMENT

Forces of Change Assessment (FOCA) focuses on the identification of forces, such as trends, factors or events that are or will be influencing the health and quality of life of the community and the work of the local public health system. The forces identified, together with the results of the other three MAPP Assessments, serves as the foundation for identifying strategic health priorities.

- **Trends** are patterns over time, such as migration in and out of a community or a growing disillusionment with government.
- **Factors** are discrete elements, such as a community's large ethnic population, an urban setting, or the jurisdiction's proximity to a major waterway.
- **Events** are one-time occurrences, such as a hospital closure, a natural disaster, or the passage of new legislation.

FOCA focuses on the identification of forces like legislation, technology, and the social-economic trends that all impact the community and its public health system. This assessment is designed to answer the following questions:

- What is occurring or might occur that affects the health of our community or the local public health system?
- What specific threats or opportunities are generated by these occurrences?

METHODOLOGY

Beginning in December 2019, HCSEF facilitated a series of meetings with members of the local public health system and the local health department as part of the MAPP process. These meetings included two LPHSA meetings and a series of Community Health Advisory Council meetings. During the September 2020 Community Health Advisory Council meeting, HCSEF guided 31 Advisory Council members through a brainstorming session to identify trends, factors and events that impact the community and its public health system. HCSEF staff provided a brief presentation about forces of change, and then guided Advisory Council members through a series of discussion questions. Trends, factors and events were captured on-screen during the meeting using the FOCA Matrix. In addition, during each meeting, HCSEF captured qualitative data that highlights the forces impacting the local public health system. HCSEF staff thematically categorized the findings from each meeting as an economic, legislative, environmental, social or technological force.

The table below is a summary of forces of change identified by Martin County Community Health Advisory Council members

Table 231: Summary of Forces of Change in Martin County, as of December 2020

Category	Forces of Change		
	Events	Factors	Trends
Economic	Opioid funding	Large scale evictions projected to come	Long run of decreases in public health funding
	Residents are unable to pay for rent and insurance due to COVID-19		Systemic racism: -Economic gap -Generational poverty
	Starting a program to assist renters		Increase in homeless population
	Landlords are not getting rent and reaching out for help		Reduction in housing availability
	Job insecurity due to COVID-19		
	Grants for rental property owners		
Environmental	COVID-19 found in waste products	Blue green algae discharge/ poor air quality	
Legislative	CARES Act funding	Fear among undocumented population about being detained	The local health department has become less involved with changing/creating local laws and has shifted to supporting state laws in the last few years
	Mask ordinances	No option for Medicaid expansion in Florida	
Social	COVID-19- has put hold on services in underserved areas, not sending children to school, lack of trust, not getting treatment for other conditions	Low number of childcare centers	Older population
	Migrant workers not having access to PPE and job security	Lack of family and parenting programs	Growing non-English speaking population, including Haitian creole
	Low-literacy population impacted higher by COVID-19 in areas like Indiantown	Barriers to housing (including difficulty accessing Section 8 housing, high costs for renter)	Language barrier
	Hold on in-person services in Martin due to COVID-19	Lack of personal health service providers -pediatric dentists -mental health providers	Nurses are no longer in the community
	Stress of having to keep child home due to COVID-19	Low literacy - underserved areas	Vaping
	Food insecurity due to job insecurity w/ COVID-19	Difficult to reach senior population	•Decrease in Black infant mortality over last few years due to peer-to-peer education

	Mothers are in need of basic supplies due to COVID-19	High turnover among staff in LPHS	Systemic Racism: -higher death rates -Disparities in treatment
		Lack of diversity in LPHS workforce	Equity (SDOH)
		Lack of services in certain geographic areas (i.e. Indiantown)	
		Lack of affordable housing -especially for seniors	
		No homeless facilities for families	
		Gap in mental health services (especially in specific areas such as Jensen Beach)	
		No mental health facilities for Baker Act population	
		Lack of providers for suicide prevention	
		Lack of trust in the health system	
		Lack of diversity/inclusion	
Technological	Need for telehealth services due to COVID-19	Lack of access to technology among seniors	
	COVID-19 Dashboard	Lag in data indicators	
	Eviction predictor	Need for more telehealth during COVID	
		Technology doesn't adequately meet the need for some services (e.g., substance use)	
		Digital divide among: -low-income families -children in schools	

IDENTIFICATION OF STRATEGIC HEALTH ISSUES

INTRODUCTION

The Health Council of Southeast Florida (HCSEF) provided Advisory Council members with a summary of the results from the four MAPP assessments. In this stage of the MAPP process, HCSEF facilitated a multi-voting exercise with the intent of identifying a list of strategic issues affecting the health of Martin County residents. During this session, committee members reviewed and continued to discuss the health issues that emerged from the four assessments and brainstormed strategic issues to prioritize, before participating in the formal voting process. Presented below are the strategic health issues affecting Martin County residents, identified by the Advisory Committee:

1. Minority Health Disparities
2. Mental Health and Substance Abuse
3. Social determinants of Health

This process was designed to provide a platform for the initial phase of ongoing strategic health care planning and community health improvement planning which will ultimately become the focus of Martin County's health and health care for the next 3-5 years.

METHODOLOGY

On December 16, 2020, HCSEF provided an overview of the summary of the key quantitative and qualitative findings from the four assessments. The summary review of the assessments considered a variety of key factors that may influence and impact the health and quality of life of community members and the local public health system. Upon reviewing the summary results, HCSEF then led a facilitated discussion on the most pressing health issues in Martin County. The facilitation occurred during a two-hour session held via Zoom. The group was comprised of seventeen Advisory Committee members. HCSEF facilitated Advisory Council members through the following process:

1. Overview of key qualitative and quantitative findings
2. Facilitated round-robin, open discussion with the Advisory Council to compile a list of key health issues and HCSEF staff captured responses on-screen in a Word document
3. HCSEF staff then provided an overview of the list key health issues and facilitated a discussion to identify specific threats and opportunities
4. After the allotted time period, Advisory Council members were asked to vote on their top 3 key health issues using the Zoom polling feature

SUMMARY OF RESULTS

Table 232: Summary of Strategic Health Issues

Strategic Issues			
Issue	Category	Threats	Opportunities
Social Determinants of Health	Chronic Conditions	Access to healthy, affordable foods in certain geographic areas	
Social Determinants of Health	Housing	Affordable housing is a challenge and stressor for many residents	
Social Determinants of Health	Poverty	Poverty has an overall negative effect on health	
Health Status	Health disparities	Health disparities among minority populations -Diabetes -Cardiovascular conditions Lack of Trust	-Build trust throughout the community, especially among the minority populations -Remove language disparities Using a community-based approach for programs -Have "boots on the ground" and be where the people need us -Possibly a CHW model that hires individuals that look like and speak the language of the community
Health Status	Substance Abuse	-Addiction -Opioid Use	
Health Status	Aging Problems	-Dementia -Alzheimer's	
Health Status	Aging Problems	Falls among senior population	
Access to Care & Utilization	Transportation	Transportation is a challenge in specific geographic areas	Mobile services in high-need geographic areas -Indiantown -Port Salerno
Access to Care & Utilization	Mental Health	Limited access to mental health professionals -Bipolar, schizophrenia, Trauma, addiction -Suicide rates, especially among older adult residents (55+)	Mobile health crisis unit
Access to Care & Utilization	Prenatal care	Need for early entry into prenatal care	
Emerging Concerns	COVID-19	COVID has magnified previous issues -lack of health insurance -poverty -chronic diseases, etc.	Community initiatives that foster collaboration and teams working together to help residents/clients

Through careful analysis of the findings of the four assessments, Advisory Council members acknowledged that there were relevant key issues in the access and delivery of services provided by the local health system. The table below shows the cross-cutting community health challenges affecting Martin County residents.

CONCLUSION

The identified strategic health issues outlined in table 167, are considered as health issues in planning efforts by local organizations serving Martin County residents. These strategic issues were prioritized during the next component of the MAPP process: Health Needs Prioritization to identify focus areas where the Advisory Council can have the greatest impact.

CONCLUSION

To develop this Community Health Assessment, Martin County utilized the Mobilize Action for Planning and Partnerships (MAPP) framework, which emphasizes a collaborative effort by community members to understand the health landscape in the county. Due to COVID-19, conversations that are critical to the MAPP process have been delayed. For this reason, the Community Health Assessment will continue to be updated beyond May 2020 to ensure the MAPP framework is conducted to fidelity. This will ensure this assessment can be utilized to guide planning efforts to improve the overall health and wellbeing of Martin County residents.

SUMMARY OF ANNUAL UPDATES

2021 COMMUNITY HEALTH ASSESSMENT UPDATE

Each year following the development of the Community Health Assessment (CHA), select indicators that are most relevant to the Community Health Improvement Plan (CHIP) will be updated with the latest available data. In 2021, the following indicators were updated in the CHA above based on their relevance to the CHIP priority areas, goals, and objectives.

Table 233: CHA 2021 List of Updated Select Indicators

CHIP Priority Area	CHIP Goal	Indicator	Page/Table/Figure
Access to Health and Human Services	Create a Martin County where all residents are able to access health and human services.	Percentage of Adults with Any Type of Health Insurance Coverage, Martin County and Florida, 2010, 2013, 2016, 2019	Page 207 Table 200
		Adults who could not see a doctor in the past year due to cost, Martin County and Florida, 2010, 2013, 2016, 2019	Page 207 Table 201
		Uninsured Population by Race and Ethnicity, Martin County and Florida, 2019	Page 209 Table 203
	Create a Martin County where all residents are	Age-Adjusted Hospitalizations from Coronary Heart Disease,	Page 127 Table 95

	able to live long, healthy lives	Rate per 100,000 Population, Martin County and Florida, 2016-2020	
		Age-Adjusted Hospitalizations from Coronary Heart Disease by Race, Rate per 100,000 Population, Martin County and Florida, 2016-2020	Page 128 Figure 35
		Age-Adjusted Hospitalizations from Coronary Heart Disease by Ethnicity, Rate per 100,000 Population, Martin County and Florida, 2016-2020	Page 129 Figure 36
		Age-Adjusted Hospitalizations from or with Diabetes, Rate per 100,000 Population, Martin County and Florida, 2016-2020	Page 131 Table 99
		Age-Adjusted Hospitalizations from or with Diabetes by Race, Rate per 100,000 Population, Martin County and Florida, 2016-2020	Page 132 Figure 37
		Age-Adjusted Hospitalizations from or with Diabetes by Ethnicity, Rate per 100,000 Population, Martin County and Florida, 2016-2020	Page 133 Figure 38
		Mental Health and Substance Use	Create a Martin County where all residents are able to access mental

	health and substance use services	Martin County and Florida, 2016-2020	
		Licensed Mental Health Counselors, Rate per 100,000 Population, Martin County and Florida, 2016-2020	Page 203 Table 193
		Licensed Psychologists, Rate per 100,000 Population, Martin County and Florida, 2016-2020	Page 204 Table 194
		Licensed Marriage and Family Therapists, Rate per 100,000 Population, Martin County and Florida, 2016-2020	Page 204 Table 195
	Create a Martin County where all residents are empowered to seek mental health and substance use services	Percent of Adults Who Have Ever Been Told They Have a Depressive Disorder, Martin County and Florida, 2013, 2016, 2019	Page 120 Table 85
		Age-Adjusted Hospitalizations for Mental Disorders, Rate per 100,000 Population, Martin County and Florida, 2016-2020	Page 122 Table 88
		Age-Adjusted Hospitalizations for Mental Disorders by Race, Rate per 100,000 Population, Martin County and Florida, 2016-2020	Page 122 Table 89

	Create a Martin County where all residents are able to commute to work, school, health care appointments and social events.	Vehicles Available in Occupied Housing Units, Martin County and Florida, 2019	Page 60 Table 42
	Create a Martin County where all residents have access to stable and affordable housing.	Homeless Population, Martin County, January 2020 and January 2021	Page 51 Table 30

APPENDIX

PROVIDER/STAKEHOLDER COMMUNITY HEALTH SURVEY

Martin County Community Health Survey for Providers/Stakeholders

The purpose of this survey is to learn more about the health and social services in Martin County. The Martin County Community Health Advisory Council will use the results of this survey and other information to identify the most pressing issues that can be addressed through community action.

Your responses will remain completely confidential and no identifiers will be reported. We value your time and anticipate the survey should take no more than 5-7 minutes to complete.

In appreciation for your time, we will be raffling \$25 gift cards to those who complete the survey by April 10th.

Demographics

1. What type of organization are you completing this on behalf of? Choose ALL that apply.

- Academic institution
- Community-based organization
- Foundation/grant-making organization
- Religious organization (e.g., church, mosque)
- Hospital
- Health insurance plan
- Clinic
- Health Department
- Other (please specify)

2. Which services does your organization provide? **Choose ALL that apply.**

- Behavioral health (e.g., tobacco cessation)
- Dental care
- Insurance enrollment and/or education programs
- Education (e.g., Head Start, GED, child development, adult continuing education, literacy, after school programs, etc.)
- Food insecurity assistance (e.g., food pantry, bags of groceries, meal programs, etc.)
- Health education and/or promotion
- Health screenings
- Legal services
- Mental health (e.g., grief support group)
- Primary care
- Public assistance programs (e.g., SNAP, housing assistance, assistance paying for bills, etc.)
- Screening for eligibility for social programs
- Specialty Medicine (e.g., cardiologist, gynecologist, rheumatologist, etc.)
- Transportation coordination and/or provision
- Other (please specify)

3. Which of these populations does your organization work with? **Choose ALL that apply.**

- Homeless
- Individuals living with a disability (e.g., brain-based challenges, physical disability, etc)
- Infants/children/adolescents
- LGBTQ
- Low income
- Migrants or refugees
- Pregnant or postpartum women
- Rural residents
- Seasonal/migrant farm workers
- Seniors (ages 65 and over)
- N/A - We do not provide services to specific populations
- Other (please specify)

4. What are the primary languages of the individuals your organization serves? **Choose ALL that apply.**

- An Asian language
- English
- French
- Haitian Creole
- Native or indigenous
- Spanish
- Spanish Creole
- Other (please specify)

5. In what ZIP code(s) is your organization physically located? **Choose all that apply.**

- 34990 (Palm City)
- 34994 (Stuart)
- 34992 (Port Salerno)
- 34996 (Sewall's Point/ Stuart)
- 33455 (Hobe Sound)
- 34997 (Stuart)
- 34956 (Indiantown)
- 34957 (Jensen Beach)

6. In what ZIP code(s) does your organization provide services? **Choose ALL that apply.**

- 34990 (Palm City)
- 34994 (Stuart)
- 34992 (Port Salerno)
- 34996 (Sewall's Point/Stuart)
- 33455 (Hobe Sound)
- 34997 (Stuart)
- 34956 (Indiantown)
- 34957 (Jensen Beach)

7. How would you rate the overall health of your community? **Choose one.**

Very unhealthy	Unhealthy	Somewhat healthy	Healthy	Very healthy
<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

8. Based on your experience as a provider/stakeholder in Martin County, what are the **three** most important elements of a "healthy community"?

- Good place to raise children
- Low crime / safe neighborhoods
- Good schools
- Access to health care
- Parks and recreation
- Clean environment
- Arts and cultural events
- Affordable housing
- Strong family life
- Good jobs and healthy economy
- Healthy behaviors and lifestyles
- Religious or spiritual values
- Other (please specify)

Health Issues

9. Based on your experience serving the residents in Martin County, what are the **three** most common “health issues” affecting the community?

- Aging problems (e.g., arthritis, hearing/vision loss)
- Heart disease and stroke
- High blood pressure
- HIV / AIDS
- Rape / sexual assault
- Respiratory / lung disease
- Cancer
- Child abuse / neglect
- Dental problems
- Diabetes
- Domestic violence
- Homicide
- Infant death
- Infectious diseases (e.g., hepatitis, TB, STDs)
- Suicide
- Teenage pregnancy
- Firearm-related injuries
- Behavioral health (e.g., substance use)
- Mental health (e.g., anxiety, depression)
- Motor vehicle crash injuries
- Other (please specify)

10. Based on your experience serving the residents in Martin County, what are the **three** most common "risky behaviors" residents engage in?

- Alcohol abuse
- Drug abuse
- Lack of exercise or activity
- Poor eating habits
- Lack of preventive care (e.g., not getting "shots" or vaccinations, not getting annual exams/screenings)
- Tobacco use
- Not using seat belts and/or child safety seats
- Unsafe sex
- Violence-related behaviors (e.g., attempted suicide, carried a weapon)
- Other (please specify)

11. What are the **three** most common health-related or medical services your clients, patients, or residents inquire about?

- Geriatric health
- Dental care
- Primary care
- Prescription assistance
- Mental health (e.g., psychiatry)
- Pediatric health
- Health insurance
- Screening tests (e.g., HIV testing, mammogram)
- Specialty care
- Behavioral health (e.g., Medication-Assisted Therapy)
- Women's health
- Men's health
- Reproductive health
- Other (please specify)

12. What are the **three** most common social services your clients, patients, or residents inquire about?

- Senior services and adult caregiver support
- Assistance paying for childcare
- Assistance paying for household expenses (e.g., utility bills, rent/mortgage)
- Services for individuals with a disability
- Economic development (e.g., job search assistance, mentorship, referral, training, and placement)
- Education (e.g., Head Start, GED, child development, adult continuing education, literacy, after school programs)
- Food assistance
- Housing
- Legal services
- Behavioral health (e.g., drug rehabilitation, Alcoholics Anonymous, Narcotics Anonymous)
- Mental health (e.g., support groups)
- Transportation
- Other (please specify)

Barriers to Care

13. What are the top **three** barriers to accessing medical services that your clients, patients or residents experience?

- Cost
- Services not covered by insurance
- No insurance
- No appointments available or long waits for appointments
- No providers available
- Lack of transportation
- Low literacy
- Lack of adequate translation services
- N/A
- Other (please specify)

14. What are the top **three** barriers to accessing social services that your clients, patients, or residents experience?

- Low literacy
- Lack of translation services
- Lack of awareness of services
- Lack of legal documentation
- Lack of non-legal, necessary documentation (e.g., pay stubs, proof of address)
- Time constraints (e.g., work, child care, etc.)
- Long wait time
- No agencies providing this service in Martin County
- Lack of transportation
- N/A
- Other (please specify)

Additional Questions

15. Does your agency conduct Community Health Assessments or similar assessments?

- Yes
- No

16. We strive to coordinate with the work that other agencies are doing. Please share the top **three** findings from your most recent assessment?

17. What is the best email address to reach you?

If you would like more information about this community project, please contact the Health Planning Department at Health Council of Southeast Florida at planning@hcsef.org.

Thank you very much for your response!

RESIDENT COMMUNITY HEALTH SURVEY

The purpose of this survey is to learn more about the health and social services in Martin County and how COVID-19 has affected the community's health.

The Martin County Community Health Advisory Council will use the results of this survey and other information to identify the most pressing issues that can be addressed through community action.

Your responses will remain completely confidential and no identifiers will be reported. We value your time and anticipate the survey should take no more than 10 -15 minutes to complete.

The first 50 people who complete the survey will be entered into a raffle for a \$15 gift card. If you are interested in being entered into the raffle, please provide your contact information at the end of the survey.

Demographics

1. In which ZIP Code do you live?

- 34990 (Palm City)
- 34994 (Stuart)
- 34992 (Port Salerno)
- 334996 (Sewall's Point/Stuart)
- 33455 (Hobe Sound)
- 34997 (Port Salerno/Stuart)
- 34956 (Indiantown)
- 34957 (Jensen Beach)
- Other (please specify)

2. How old are you?

- Under 18
- 18-24
- 25-34
- 35-44
- 45-54
- 55-64
- 65-74
- 75-84
- 85 and older
- I prefer not to answer.

3. Do you think of yourself as:

- Male
- Female
- Transgender man/trans man/female-to-male (FTM)
- Transgender woman/trans woman/male-to-female (MTF)
- Genderqueer/gender nonconforming neither exclusively male nor female
- I prefer not to answer.
- Other (please specify)

4. Do you think of yourself as:

- Homosexual (gay or lesbian)
- Heterosexual (straight)
- Bisexual
- Queer, pansexual or questioning
- Don't know
- I prefer not to answer.
- Other (please specify)

- Less than \$10,000
- \$10,000 to \$19,999
- \$20,000 to \$34,999
- \$35,000 to \$49,999
- \$50,000 to \$74,999
- \$75,000 to \$99,999
- \$100,000 to \$124,999
- \$125,000 to \$149,999
- \$150,000 to \$174,999
- \$175,000 to \$199,999
- \$200,000 or more
- I prefer not to answer.

Personal Health and Health Care

12. How would you describe your overall health? Choose one.

Excellent	Very Good	Good	Fair	Poor
<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

13. Where do you most often go for preventative healthcare (e.g., yearly physical exam, immunizations, etc.)? Check ALL that apply.

- Community Health Center
- Emergency Room
- Free Clinic
- Primary Care Provider
- Telehealth
- Urgent Care Center
- Quick Clinic (e.g., CVS, Walgreen's, etc.)
- VA (Veteran's Medical Center or clinic)
- I do not receive check-ups for preventative healthcare.
- Other (please specify)

14. Where do you most often go when sick or in need of urgent healthcare (e.g., injury, pain, flu, etc.)? Check ALL that apply.

- Community Health Center
- Emergency Room
- Free Clinic
- Primary Care Provider
- Telehealth
- Urgent Care Center
- Quick Clinic (e.g., CVS, Walgreen's, etc.)
- VA (Veteran's Medical Center or clinic)
- I have not needed urgent healthcare.
- Other (please specify)

15. Where do you most often go for routine dental care (e.g., teeth cleanings, twice a year exams, etc.)? Check ALL that apply.

- Community Health Center
- Free Clinic
- Dentist
- Primary Care Provider
- VA (Veteran's Medical Center or clinic)
- I do not receive check-ups for dental care.
- Other (please specify)

16. Where do you most often go for urgent dental care (e.g., tooth pain, damaged tooth, etc.)? Check ALL that apply.

- Community Health Center
- Free Clinic
- Dentist
- Emergency Room
- Primary Care Provider
- Specialist
- Urgent Care Center
- Quick Clinic (CVS, Walgreen's, etc.)
- VA (Veteran's Medical Center or clinic)
- I have not needed urgent dental care.
- Other (please specify)

17. Where do you most often go for routine behavioral health care (e.g., therapy, medication refills, substance abuse treatment, etc.)? Check ALL that apply.

- Community Health Center
- Free Clinic
- Primary Care Provider
- Specialist Provider (e.g., psychiatrist, licensed clinical social worker, etc.)
- Telehealth
- Treatment facility (e.g., detox, rehabilitation, etc.)
- Peer Support Group
- VA (Veteran's Medical Center or clinic)
- I do not receive routine behavioral health care.
- Other (please specify)

18. Where you most often go for urgent behavioral health care (e.g., mental health crisis, drug overdose, substance abuse relapse, etc.)? Check ALL that apply.

- Community Health Center
- Free Clinic
- Primary Care Provider
- Specialist Provider (e.g., psychiatrist, licensed clinical social worker, etc.)
- Telehealth
- Emergency Room
- Urgent Care Center
- Treatment facility (e.g., detox, rehabilitation, etc.)
- VA (e.g., Veteran's Medical Center or clinic)
- I have not needed urgent behavioral health care.
- Other (please specify)

KEY INFORMANT INTERVIEW TOOL

Key Informant Interview Script

Good morning/afternoon. My name is [interviewer's name]. I'm [position] with the Health Council of Southeast Florida. Thank you for taking time out of your busy day to speak with me. I'll try to keep our time to no more than 45 minutes.

The Florida Department of Health in Martin County has engaged us to facilitate the development of a comprehensive community health assessment. In addition to the quantitative data that we have gathered, community input is essential to this process. We aim to capture the voice of the community through interviews with key stakeholders as well as focus groups with residents. Once completed, this assessment will lead to the development of a community health improvement plan, something actionable that can be used to improve the health of the community.

You have been selected as a key informant because of your knowledge, insight and familiarity with the community. As we conduct these interviews, the themes that emerge will be summarized and made available to the public; however, individual interviews will be kept confidential. This call will not be recorded but I will be taking notes along the way.

I will ask a series of questions about the role of your organization in the local public health system, the health and wellbeing of residents in Martin County, and then conclude with questions related to how COVID-19 has impacted residents and the local public health system.

Do you have any questions? If not, we will go ahead and get started.

Martin County
Community Health Assessment
Key Informant Interview Tool

Name: Organization:

Date: Time:

Highlight ALL that apply.

- Persons with special knowledge of or expertise in public health
- Federal, tribal, regional, state, or local health or other departments or agencies, with current data or other information relevant to the health needs of Martin County.
- Leaders, representatives, or members of medically underserved, low-income, and minority populations, and populations with chronic disease needs in Martin County.
- Other local stakeholder

Organization Background

I am going to start by asking a few questions about your organization.

1. Can you tell me about the services your organization provides in Martin County?
Probe(s):
 - a. What are the demographics of the residents you serve?
 - b. How do residents find out about these services?

2. What are some of the challenges in providing these services to the community?

3. How do you measure success of your programs or services?

Community Themes and Strengths Questions

Next we are going to discuss how to achieve a healthy county.

4. How would you describe a healthy county?
Probe(s):
 - a. What strategies or resources would help create a healthy county?

5. What are some strengths in Martin County that contribute to a healthy community? (i.e.- social services, social support groups, school system, safety, health & wellness resources)

Probe(s): (if needed)

- a. How do these strengths help to create a healthy community?

6. You just shared some of the strengths in the county, but what opportunities exist for improving the county's overall health?

Probe(s):

- a. What resources need to be expanded upon to better support the needs of residents?
- b. What resources should be added?

7. What are common health issues residents you serve struggle with?

Probe(s):

- a. What chronic illnesses are most common? (e.g. diabetes, high blood pressure, heart disease, cancer, obesity)
- b. What other health issues have you noticed? [e.g. behavioral health (mental health and substance abuse), oral health, infectious diseases]

8. What factors contribute to the health conditions you have described?

Probe(s): (If needed)

- a. Can you share how the community or environment contribute to these health issues?
- b. What are things individuals do or don't do that can cause these health conditions?

9. From your experience, which communities or demographics are most affected by the health issues you have mentioned? (e.g. Children, elderly, people of color)

Probe(s):

- a. Why do you believe these groups are most affected? (i.e.-racism, sexism, ageism)

10. Can you share a few barriers residents face when trying to improve or maintain their health? (e.g. - cost, transportation, etc.)

Probe(s):

- a. What health services are unavailable or hard to access? (e.g., medical specialists)
- b. What resources or social services to promote health are unavailable or hard to access? (e.g., grocery stores, health classes, transportation to services)

11. What types support do residents need to overcome these barriers?

Probe(s):

- a. What strategies would you suggest to provide this type of support? (e.g., environmental, policies, programs)

12. How can residents and community organizations work together to improve the health of the county?

COVID-19 Impact

My final two questions are about the impact of COVID-19 in Martin County.

13. How has COVID-19 affected the community?

Probe(s):

- a. What are the emerging needs of the residents you serve?

14. How has COVID-19 affected the local public health system?

Probe(s):

- b. How has it affected your organization's services?

Conclusion

15. Is there anything else you would like to add about health and human services in Martin County that we have not covered with the question I have asked?

Those are all of my questions. Thank you again for your time and for sharing your insights.

FOCUS GROUP DISCUSSION: GUIDELINES AND QUESTIONS

A. Introduction:

Hello and welcome to our focus group! A focus group is simply a gathering of people who have something in common. Each of you are here today as a resident of Martin County and have a unique perspective on the services in your communities.

My name is [REDACTED] and I am with the Health Council of Southeast Florida. We are working on a Community Health Assessment Report for Martin County to help our local policymakers and providers focus on the health and social service needs that you feel are important. We will be talking in general about health issues in your community and also about the health and social service needs that you, your family and your community may have. The purpose is to understand what you think are the most pressing needs of your community and the factors that influence an individual's health and well-being. You know the needs of your community better than anyone else, so your input is very important to us.

We are conducting multiple focus groups in Martin County. Our goal is to have everyone here feel comfortable speaking openly, and be able to share their thoughts, ideas and experiences honestly. So it is important for everyone to speak, for only one person to talk at a time, to respect the opinions of others and to keep private the information shared in this group. There are no wrong answers so please feel free to share your experiences and your point of view, even if it is different from what others have said.

Your comments will be summarized in a report, but we will not use your name and all responses will remain completely confidential. We will be taking notes and recording during this discussion so that we can write our report, but only staff writing this report will have access to these notes and recordings.

My role will be to ask questions and listen. It is important for us to hear from all of you because you all have different and valuable experiences. You will be receiving a \$20 gift card as a token of appreciation for your participation.

Does anyone have any questions before we begin? If there are no additional questions, we will begin.

Focus Group Instrument

We will start with a quick icebreaker and then I will ask a series of questions about health issues in the community and how to achieve a healthy community. Please share your name, how long you have lived in Martin and your favorite place in the county. (After icebreaker) Thank you all for sharing, now I will start with our first question...

1. How would you describe a healthy community?

Probes:

- What resources are available in a healthy community?
- Who has access to these resources in a healthy community?

2. What are some of the strengths where you live that contribute to a healthy community? (i.e. social services, social support groups, school system, safety, health & wellness resources)

Probes:

- How do these strengths help create a healthy community?

3. You just shared about some of the strengths in your community, but what opportunities exist for improving that health of your community?

Probes: (if needed)

- What health services are unavailable or hard to access? (e.g., medical specialists)
- What resources or social services to promote health are unavailable or hard to access? (e.g., grocery stores, health classes, transportation to services)

4. What are common health issues that you, your family or your community struggle with?

Probes: (if needed)

- What chronic (long-lasting) illnesses are most common? (e.g. diabetes, high blood pressure, heart disease, cancer or obesity)
- What other health issues have you noticed? (e.g. mental health and substance abuse...etc.)

5. What do you believe causes the health issues you have described?

Probes:

- How does the community or environment contribute to these health issues?
- What individual behaviors or beliefs contribute to these health issues?

6. Who do you feel struggles the most with these health issues you have described? (i.e. - Children, elderly, people of color)

Probes:

- Why do you believe these groups are most affected? (i.e.-racism, sexism, ageism)

7. Can you tell us what makes it difficult for you, your family or members of your community to improve or maintain their health?

8. What types of support do you believe residents need to overcome these barriers?

Probes:

- How would you suggest providing this type of support? (e.g., environmental, policies, programs)

9. How can residents and community organizations work together to improve the health of the county?

COVID-19 Impact

My final two questions are about the impact of COVID-19 in Martin County.

10. How has COVID-19 affected you, your family and members of your community?

11. How has COVID-19 affected access to health and social services in your community?

Conclusion

12. Do you have any additional comments you would like to add is there anything additional that we have not covered with the question we have asked?

Thank you for your time, and as mentioned you will be receiving a \$20 gift card as a token of appreciation for your time and participation. You can expect this in the mail within the next 2-3 weeks.
