

Infection Control in LTC

Susan Pendergrass, MSN, MEd, APRN, FNP-BC
Florida Department of Health

Objectives

1. Discuss risk factors placing the LTC resident at higher risk for infection, with focus on COVID-19
2. Review infection control guidelines and best practices, including Personal Protective Equipment (PPE's)
3. Discuss considerations and recommendations for LTC facilities and staff regarding approaches to effective infection control

Infection Control: “ Stop The Spread “

Protect Residents

Protect Staff

Protect Yourself

Protect Others

LTC Residents:

- Vulnerable to infections > Multiple medical conditions, < immune system, body systems change with age
- Functional impairment > Physical and mental
- Physical environment > Social distancing may be challenging
- Health care needs > Different needs require different levels of care

Overview of COVID-19

Novel Coronavirus, 2019-nCoV

is now officially called

COVID-19

CO - Corona

VI - Virus

D - Disease

World Health
Organization

WHO: COVID-19

Know what to look for

Symptoms may differ

May be spread
asymptotically
staff>resident>resident

Report immediately

Common symptoms:

Fever

Dry cough

Fatigue

Uncommon symptoms:

Headache

Nasal congestion

Sore throat

Coughing up sputum

Shortness of breath

Pain in muscles
or joints

Chills

Nausea and/or
vomiting

Diarrhoea

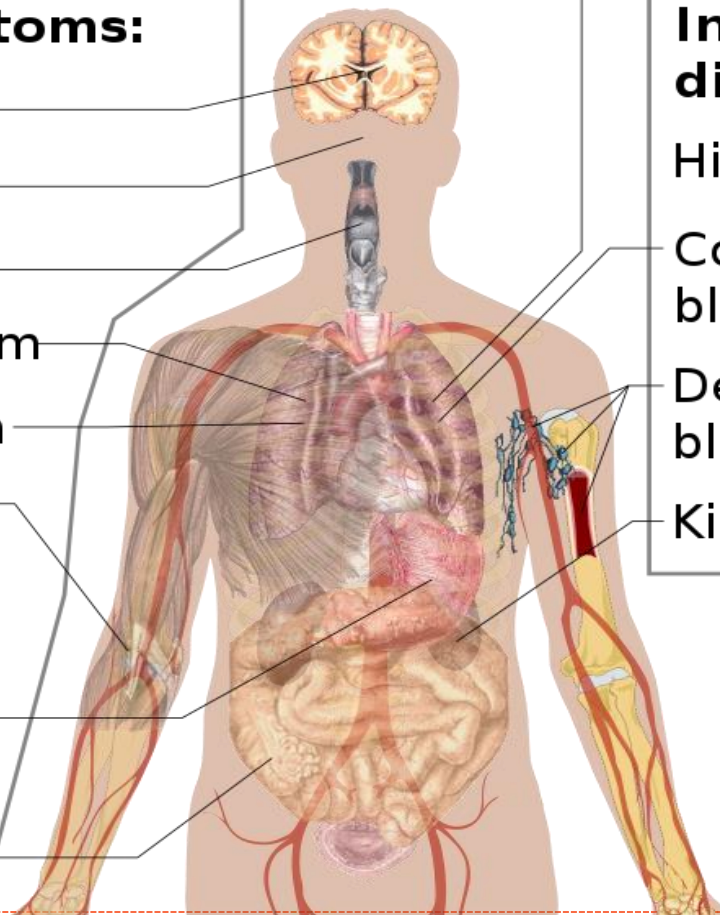

In severe disease:

High fever

Coughing up
blood

Decreased white
blood cells

Kidney failure

LTC Facility Guidelines

- Implement CMS and CDC Infection Control Guidance
- Symptom screening for all
- ALL staff must use appropriate PPE's
- Maintain awareness of supplies and needs for LTC
- Policies and procedures to separate COVID-19 positive residents, including staffing assignments

Centers For Medicare & Medicaid Services: COVID-19 Long-Term Care Facility Guidance. Pages 1-3. Revised: 04/02/2020. www.cms.gov/files/document/4220-covid-19

PPE's: Personal Protective Equipment

Different situations require different types of PPE's

- Masks and respirators - covering nose and mouth
 - “fit testing” - performed by trained personnel to determine appropriate N95 mask size/fit
- Gloves
- Gown - for droplet precautions as available
- Eye protection, face shields < exposure risk when providing direct care
- Do not share PPE's
- Do not use gowns and gloves for more than one resident
- Know how to safely don, remove, discard, clean/disinfect

www.FloridaHealth.gov/COVID-19:CDC

Face Masks

- Use FDA regulated masks for protection
(cloth masks are not considered medical grade PPE)
- Any type mask **must cover nose and mouth**
- Know how to don and remove safely
- Take care not to touch mask after donning
- If touching or adjusting mask, immediately follow with hand hygiene
- Remove & discard if soiled, damp, damaged, or difficult to breathe through
- Not all masks can, or should be re-used

www.CDC.gov/coronavirus/2019-ncov/infection-control

Florida Department of Health - COVID-19

Assisted Living Facilities Can Prevent Spread:

- Visitor, non-essential staff or employee entrance/exit restrictions
- Restriction signs visibly posted
- Entrance surveillance - temperature/symptom checks - screen everyone
- Cancel field trips, group activities/gatherings, communal meals
- PPE's - policy/guidelines
- Screening for fever/respiratory symptoms - staff before start/end shifts
- Adhere to guidelines if becoming symptomatic/ill at work
- Adhere to guidelines if developing symptoms off work, including reporting and stay-at-home

FDOH-FloridaHealth.gov/COVID-19. Florida Health Office of Communications.03/27/2020. Source: CDC

Florida Department of Health - COVID-19

- Identify symptoms and manage infections in residents early
- Know what to look for: each individual is unique
- Twice per shift assess and document:
 - Vital signs
 - Pulse ox with residents who are ill
 - Always screen for: fever, cough, SOB, change in status
 - Atypical symptoms: new or worsening malaise, new dizziness or diarrhea
- Identify those who may need transfer or relocation
- **Immediately isolate anyone with symptoms**
- **Separate others from actively infected residents**

FDOH.FloridaHealth.gov/COVID-19. Florida Health Office of Communications. 03/27/2020. Source: CDC

Environmental, Linens and Wastes

Healthcare workers and staff must know policies regarding:

- Clean and soiled linens - Laundering
- Food - feeding/eating not in common areas - ? plastic/paper products
- Storage of items
- Disposal, including hazardous objects/materials
- EPA-registered disinfectants
- Environmental cleaning and maintenance of all areas
- Environmental disinfecting - areas, objects, equipment
- Housekeeping and other personnel should use appropriate PPE's

COVID-19 Control Measures for LTC: Interim Guidance (subject to change). 03/20/2020

Direct Patient Contact

If it touches the patient, consider contaminated

Health Care Equipment and Supplies

Not everything is one time use and/or disposable

Equipment and Supplies

Prevent cross-contamination

Infection Control Considerations

- Infection Control may utilize more equipment and supplies
- Don't litter hallways or floor with red bags or trash
- Large receptacles that transport items to rooms and/or areas are concerning in an active outbreak/pandemic
- Quarantine areas must self contain **everything**
- Always wash/cleanse hands in-between whatever you do from resident to resident, room to room, area to area
- Don't rush - mistakes and "breaks" in proper technique may occur

Considerations (cont.)

- Consider controlling the environment, not the resident
- Minimum distancing is “six feet”, not four or five, but six....
- Containment may further agitate and/or confuse residents
- Medications that sedate or act as a chemical restraint not recommended - side effect profile, drug-drug interactions, etc.
- ADL's must continue, but must be adjusted
- Utilize same staff within special population units to maximize continuity of care while decreasing potential exposures

IMT.FLDOH

Recommendations

- Maintain clean & clutter free areas, including rooms & hallways
- Avoid use of large carts in hallways, ie. dinner, linens
- Consider disposable dinnerware, utensils, etc. if known or suspected cases of COVID-19 (or other infectious agents) to prevent cross-contamination or exposure
- Use approved disinfectants and supplies

www.FloridaHealth.gov/COVID-19. Source: CDC

Recommendations (cont.)

- Provide ALL staff support and education - document training
- Required in-service education with time for active interaction to facilitate learning and outcomes - not punitive
- Must include proper PPE usage, conservation, & disposal
- Staff to leave personal items in designated safe & secure area
- Personal phones do not belong in pocket of scrubs
- Communicate with the LTC and healthcare community to stay abreast of health issues and standards of care

Pendergrass, S.

LTC Healthcare: Team Approach

- * Know how and when to report:
 - If you feel ill
 - If you are uncertain
 - If you feel unsafe
- * Don't hesitate to stop and ask questions or seek assistance

Summary

- Encourage a pro-active not reactive approach to infection control.
- Recognize infection control requires a 24/7 approach throughout the entire facility with all levels of healthcare workers and staff to be effective.

Thank You!
