Merlin Case Entering for HBsAg+ Pregnant Women

For questions contact:

Cristina Dusek, Statewide Perinatal Hepatitis B

Prevention Program Coordinator

(850) 245-4444 ext. 2396

Routine Case Finding Methods

- Perform case finding in Merlin on a weekly basis utilizing:
 - Chronic hepatitis B & C task list search

and

- Electronic lab result (ELR) search
- Follow-up with physicians or laboratories that report a hepatitis B positive woman of child-bearing age

Case Components

- Once a hepatitis B positive pregnant woman has been identified, each individual case must include the following, which is part of the Merlin surveillance system requirements:
 - Profile: Each individual added to the Merlin surveillance system has a profile. All labs and disease cases for this individual are added to this profile. The profile includes name, date of birth (DOB), and geographical information. When ELRs are received through Merlin, a profile is auto-created.
 - Chronic Hepatitis B Case: Each individual who tests positive for hepatitis B will need one chronic hepatitis B case added to their profile with an associated lab. The chronic hepatitis B case is used to track the individual over time, whereas the HBsAg+ pregnant woman case is used to track a pregnancy and infant. When a hepatitis B ELR is received in Merlin, a chronic hepatitis B case is autocreated and lab is attached. Lab results obtained after the initial chronic case is created auto attach to the chronic case and will show a recent update to the case in the Merlin Hepatitis B and C Task Lists.
 - HBsAg+ Pregnant Woman Case: Obstetric providers are required to test women during each pregnancy for HBsAg. Although other hepatitis B positive labs in a pregnant women would indicate the necessity to enter a case, a HBsAg will need to be obtained to meet case definition.

Case Components

- The components of the case you will need to enter will depend on how you were notified of the case and if the individual has an existing profile or chronic hepatitis B case.
- This case entering document is divided into sections based on how you are notified of the case.
- Sections in this document include:
 - 1. Entering case without an ELR
 - 2. Entering cases found on the Chronic Hepatitis B & C Task List in Merlin
 - 3. Entering cases found by ELR search in Merlin

Entering cases without ELR

Cases without an Electronic Laboratory Report (ELR) may include the following:

- Physician or laboratory reported cases that are not reported electronically in Merlin
- Paper reported cases that are not reported electronically in Merlin

Profile Search

ELR Search								
			Merlin.Net Versio	0 8.11.1.7				

Each individual with any labs or disease cases in Merlin will need a single profile. The profile includes name, DOB and geographic information. All disease cases for the individual should be attached to a single profile.

- First search to see if a profile exists by going to the Search tab in Merlin and searching by name
- If profile does not exist, create a profile (See slide on creating a profile)

A. If a profile exists, ensure the name and DOB in Merlin matches the name and date of birth of the reported individual

- Click on the name to access the profile
- B. The profile summary includes all disease cases and labs associated with an individual
 - Picture B illustrates an individual with an existing profile and salmonellosis case attached. In this case a profile will not need to be created
 - If a profile is not found during the search, create a profile (see next slide)

Add Facility and Provider Information to manually entered lab

A. By clicking Get Lab, Get Provider, or Get Facility you may search and add facility and provider to the lab results

- B. Enter a facility or physician name and click Search.
- C. Click on the facility or provider that matches the original lab result

D. Click Link Resource

- Do the same for provider and ordering facility
- When done click Save
- E. Enter other labs by clicking Yes on the next screen
 - If no more labs to enter click NO

Reporting and Submitting a Chronic Hepatitis B Case

Case Entering for a Pregnant Woman Found On the Chronic Hepatitis B and C Task List

- Hepatitis B cases reported by ELR
 - Merlin will automatically create a profile for individuals with an ELR
 - Merlin will auto-create a chronic hepatitis B case or add an updated lab to the existing profile if a chronic hepatitis B case is already attached

Chronic Hepatitis B and C Task List Search

- B. Under Cases click Chronic Hepatitis B & C
 - Do not skip this search because there are no numbers next to the search, there will not be a number next to this
 option even if cases exist
- C. On left toolbar click on Common Criteria
- D. Narrow your search to only the Chronic Hepatitis B Disease Code (07032)
- E. Apply Additional Filter: Females, child-bearing age, Show activity for Both Cases and Labs

- When an ELR is received for HBsAg, HBV DNA, HBeAg or HBcAb, Merlin will auto-create a chronic hepatitis B case and attach the lab to the case
- When an ELR is received for HBsAg, HBV DNA, HBeAg or HBcAb, and the individual profile already has a chronic hepatitis B case, Merlin will attach the lab to the existing chronic case and notify you of the recent lab in the task list
- The ordering provider and facility indicated will be from the original lab when the chronic case was first created
 - Make sure to click on the case number and view the most recent lab and ordering facility to help determine pregnancy status
- Any women of child-bearing age who presents on this task list should be investigated to determine pregnancy status

Chronic Hepatitis B and C Task List Search

A. When you click on a Case # from the task list you will be taken directly to the Case Information screen

B. To view the profile information and summary of cases and labs, click on Summary under left toolbar heading Profile

- Picture B illustrates a profile that has an auto-created chronic hepatitis B case and labs attached
- The individual will need to be investigated to verify pregnancy status
- Each lab will need to have a corresponding HBsAg+ Pregnant Woman case if pregnant

- Investigate pregnancy status by contacting ordering provider of hepatitis B lab
- If the woman is pregnant, add a HBsAg+ Pregnant Woman case
- If a lab other than HBsAg was done, obtain required HBsAg result from provider
 - Providers are required to test for HBsAg at initial pregnancy visit and again at 28 to 32 weeks gestation for every pregnancy regardless of past test results
