

# Florida Arbovirus Surveillance Week 3: January 17-23, 2021

Arbovirus surveillance in Florida includes endemic mosquito-borne viruses such as West Nile virus (WNV), Eastern equine encephalitis virus (EEEV), and St. Louis encephalitis virus (SLEV), as well as exotic viruses such as dengue virus (DENV), chikungunya virus (CHIKV), Zika virus (ZIKV), and California encephalitis group viruses (CEV). Malaria, a parasitic mosquito-borne disease is also included. During the period of January 17-23, 2021, the following arboviral activity was recorded in Florida.

### This report contains information for 2020 and 2021.

**WNV** activity: No human cases of WNV infection were reported this week. No horses with WNV infection were reported this week. No sentinel chickens tested positive for antibodies to WNV this week. In 2021, no positive samples have been reported. In 2020, positive samples from 50 humans, 36 asymptomatic blood donors, 14 horses, four crows, 11 blue jays, two ibises, one squirrel, 19 mosquito pools, and 414 sentinel chickens have been reported from 34 counties.

**SLEV activity:** No human cases of SLEV infection were reported this week. No sentinel chickens tested positive for antibodies to SLEV this week. In 2021, no positive samples have been reported. In 2020, positive samples from eight sentinel chickens have been reported from seven counties.

**EEEV activity:** No human cases of EEEV infection were reported this week. One horse with EEEV infection was reported this week in Volusia County. No sentinel chickens tested positive for antibodies to EEEV this week. In 2021, a positive sample from one horse has been reported from one county. In 2020, positive samples from 54 sentinel chickens, 22 horses, one deer, one duck, two sparrows, and one mosquito pool have been reported from 27 counties.

**International Travel-Associated Dengue Fever Cases:** One case of dengue fever was reported this week in a person that had international travel. In 2020, 46 travel-associated cases have been reported.

**Dengue Fever Cases Acquired in Florida:** No cases of locally acquired dengue fever were reported this week. In 2020, positive samples from 71 humans and seven mosquito pools have been reported from two counties.

**International Travel-Associated Chikungunya Fever Cases:** No cases of chikungunya fever were reported this week in persons that had international travel. In 2020, no travel-associated chikungunya fever cases have been reported.

Chikungunya Fever Cases Acquired in Florida: No cases of locally acquired chikungunya fever were reported this week. In 2020, no cases of locally acquired chikungunya fever have been reported.

**International Travel-Associated Zika Fever Cases:** No cases of Zika fever were reported this week in persons that had international travel. In 2020, no travel-associated Zika fever cases have been reported.

**Zika Fever Cases Acquired in Florida:** No cases of locally acquired Zika fever were reported this week. In 2020, no cases of locally acquired Zika fever have been reported.

**Advisories/Alerts**: There are currently no counties under a mosquito-borne illness advisory. Broward and Monroe counties are currently under a mosquito-borne illness alert. No other counties are currently under mosquito-borne illness advisory or alert. A Level 1 Travel Health Notice has been issued for Central and South

America, Mexico, the Caribbean, Asia, the Pacific Islands, Africa, and the Middle East related to the transmission of dengue virus, for Chad and Ethiopia related to chikungunya virus transmission, and for Burundi related to malaria transmission. A Level 2 Travel Health Alert has been issued for Nigeria related to the transmission of yellow fever virus. Additional information on travel health notices can be found at: <a href="https://www.cdc.gov/travel/notices">www.cdc.gov/travel/notices</a>. For a map of arboviral disease activity in the United States visit: <a href="https://www.cdc.gov/arbonet/maps/ADB\_Diseases\_Map/index.html">www.cdc.gov/arbonet/maps/ADB\_Diseases\_Map/index.html</a>.

## 2020 Human Case Summary\*

West Nile Virus Illnesses Acquired in Florida: Fifty human cases of WNV illness acquired in Florida have been reported in 2020: 27 in Miami-Dade County (April, June, July, August, September), six in Broward County (July, August, October), seven in Collier County (July, August, September, October), five in Palm Beach County (June, July, August), one in Bay County (August), one in Charlotte County (September), one in Lee County (October), one in Martin County (October), and one in Suwannee County (October). Thirty-six asymptomatic positive blood donors have been reported in 2020: 33 in Miami-Dade County (May, June, July, and August), one in Broward County (August), one in Hillsborough County (October), and one in Manatee County (September).

International Travel-Associated Dengue Fever Cases: Forty-six cases of dengue fever with onset in 2020 have been reported in individuals with travel history to a dengue endemic area in the two weeks prior to onset. Counties reporting cases were: Brevard (2), Broward (6), Clay, Collier, Duval (2), Franklin, Hillsborough (3), Miami-Dade (24), Orange (2), Palm Beach, Sarasota, Seminole, and St. Lucie. Six cases were reported in non-Florida residents. In 2020, 34 cases of dengue reported in Florida have been serotyped by PCR. Please see the table below for a breakdown of cases by country of origin and serotype.

Country of Exposure	DENV-1	DENV-2	DENV-3	DENV-4	Unknown	Total
Cuba	6	1			2	9
Bolivia	2				2	4
Jamaica			3		1	4
Puerto Rico	1				2	3
Colombia	2					2
Dominican Republic	2					2
Haiti		2				2
Indonesia					2	2
Mexico	1				1	2
Paraguay				2		2
St. Barts	1	1				2
US Virgin Islands		1			1	2
Antigua and Barbuda			1			1
Bahamas	1					1
Brazil		1				1
French Polynesia		1				1
Nicaragua		1				1
Puerto Rico/US Virgin Islands	1					1
St. Barts/St. Martin	1					1
St. Lucia			1			1
St. Martin	1					1
Thailand					1	1
Total	19	8	5	2	12	46

**Dengue Fever Cases Acquired in Florida:** In 2020, 71 cases of locally acquired dengue fever have been reported in Miami-Dade (4) and Monroe (67) counties, with onsets in February, March, April, May, June, July, August, and September. One case was reported in a non-Florida resident.

International Travel-Associated Malaria Cases: Nineteen cases of malaria with onset in 2020 have been reported. Countries of origin were: Cameroon, Côte d'Ivoire, Dominican Republic, Ghana, India (2), Kenya (2), Nicaragua, Nigeria (2), Sierra Leone (4), Sudan, Uganda, and Venezuela (2). Counties reporting cases were:

Broward (4), Clay, Duval (2), Hillsborough, Lee, Miami-Dade (2), Orange (2), Osceola, Palm Beach, Pasco, Pinellas, Polk, and Volusia. Four cases were reported in non-Florida residents.

Ten cases (53%) were diagnosed with *Plasmodium falciparum*. Six cases (32%) were diagnosed with *Plasmodium vivax*. Two cases (11%) were diagnosed with *Plasmodium ovale*. The *Plasmodium* species for one case (5%) was unknown due to low parasitemia.

# **Veterinary Cases\***

\*Veterinary cases are reported by date of onset. Only mammalian veterinary cases are included in the graphs.

One horse with EEEV infection was reported this week in Volusia County.

## Veterinary WNV Disease in Florida, January 2020-2021

### Veterinary EEEV Disease in Florida, January 2020-2021

### **Sentinel Chickens\***

The table below is for the reporting of confirmatory laboratory results from this week. Some of the samples were collected at earlier dates. The date of collection is recorded for samples collected on that day along with the total number of positives and the corresponding seroconversion rate for the week the sample was collected.

No sentinel chickens tested positive for antibodies to SLEV, WNV, EEEV, or HJV this week.

		Ser	oconver	sion Rate	s (%)		Cou	inty Totals
County Colle	Flavi	SLEV	WNV	Alpha	EEEV	HJV	Collection Week	YTD

#### Sentinel Seroconversions to WNV in Florida, 2020-2021

#### Sentinel Seroconversions to EEEV in Florida, 2020-2021

# **Mosquito Pools**

No mosquito pools tested positive for WNV or EEEV this week.

County	Collection Date	Result	Species	County YTD

# **Dead Birds**

The Fish and Wildlife Conservation Commission (FWC) collects reports of dead birds, which can be an indication of arbovirus circulation in an area. This week, six reports representing a total of eight dead birds, were received from five counties.

In 2021, 18 reports representing a total of 37 dead birds (4 crows, 17 raptors) were received from 15 of Florida's 67 counties.

### 2021

County	Total Dead Birds	Crows	Jays	Raptors	Doves
Brevard	1	0	0	0	0
Collier	2	0	0	0	0
Hillsborough	1	0	0	0	0
Lee	1	0	0	0	0
Marion	3	0	0	0	0

For more surveillance information, please see the DOH website at: www.floridahealth.gov/diseases-and-conditions/mosquito-borne-diseases/surveillance.html

For arbovirus surveillance information for the United States, please see the Centers for Disease Control and Prevention website at: www.cdc.gov/ncidod/dvbid/westnile/surv&control.htm

Case tallies included in the weekly Florida arbovirus surveillance report include confirmed and probable cases for EEE, WNV infection, SLE, dengue, chikungunya, and malaria by date of onset. Suspect cases are not included. Activity is mapped by county of exposure rather than county of residence. Case definitions being used in Florida are consistent with national criteria provided by the Council of State and Territorial Epidemiologists (CSTE) and may be viewed at: <a href="https://www.floridahealth.gov/diseases-and-conditions/disease-reporting-and-management/disease-reporting-and-surveillance/index.html">https://www.floridahealth.gov/diseases-and-conditions/disease-reporting-and-management/disease-reporting-and-surveillance/index.html</a>. Case tallies reported by CDC do not include suspect cases and cases are reported by patient state of residence rather than where the exposure occurred. Data is provided by county health departments, Department of Health Bureau of Public Health Laboratories, Department of Agriculture and Consumer Services, mosquito control agencies, Florida Fish and Wildlife Conservation Commission, medical providers and veterinarians. Equine cases are provided by the Department of Agriculture and Consumer Services.

<sup>\*\*</sup>Multiple cases were identified through retrospective antibody testing. Although these persons reported a dengue-like illness, dengue fever symptoms are non-specific and some infections may be asymptomatic. Therefore, we cannot be certain that the reported illness was definitively when dengue infection occurred. Per CDC, dengue fever IgM antibodies may be detected for approximately 12 weeks after infection but may persist longer.
