HIV Prevention and Rapid Access to Treatment

Pre-Exposure Prophylaxis (PrEP) Formulary

PrEP is a key prevention strategy where persons without HIV who are at risk of HIV acquisition take prescribed antiretroviral medication to significantly reduce their risk of acquiring HIV. Below are the medications supported through the Department's Issuance Program for CHDs.

PrEP MEDICATIONS

Brand Name	Generic Name	Therapeutic Class	Pharmacologic Class
TRUVADA	emtricitabine/tenofovir disoproxil fumarate	antiretroviral	NRTI Combo

NOTE: Descovy (emtricitabine/tenofovir alafenamide) for PrEP may be prescribed for males and transgender females via traditional prescription or through the Ready, Set, PrEP program (getyourprep.com). Descovy is not FDA approved for use for PrEP in persons assigned female at birth.
