\*\*Indeterminate test results are not shown, but are included in the total tested.\*\*

Note: The positivity rate for Nassau County for 2013 appears abnormally high. The positives used to calculate these rates include newly diagnosed positives as well as previously diagnosed positives. For Nassau County in 2013, there were only 5 newly diagnosed positives, while there were 33 previously diagnosed positives. This unusually high proportion of previously diagnosed positives to newly diagnosed positives is atypical and skews the data results.
