

# National HIV Testing Day

June 27, 2018

## HIV among Floridians

### 114,772

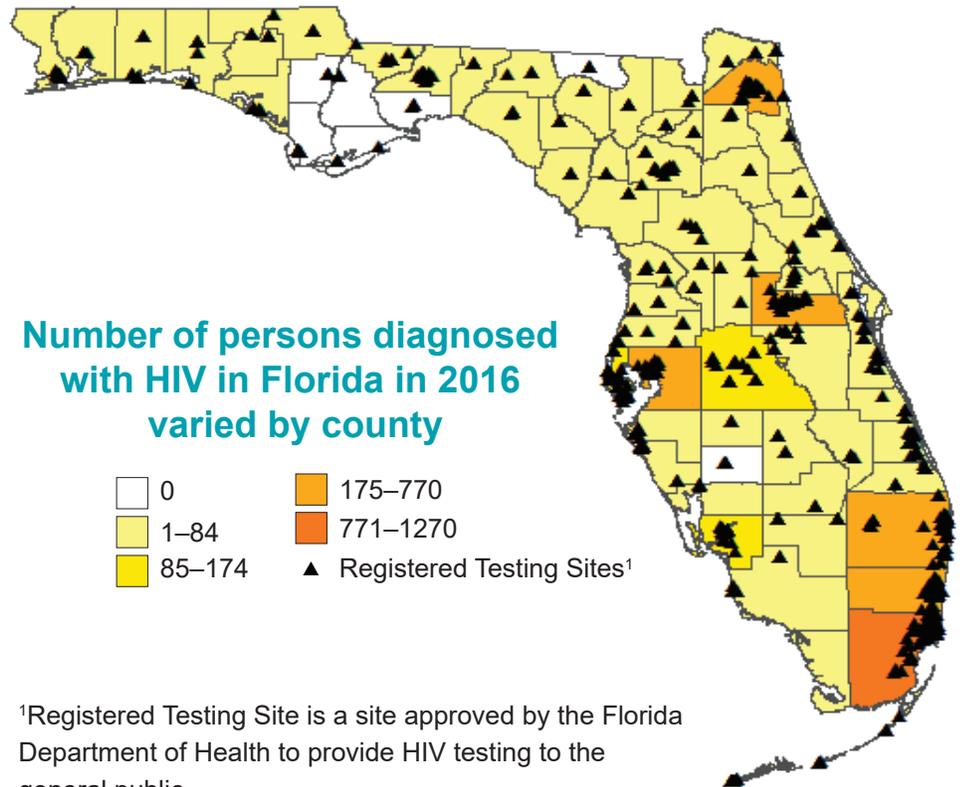

persons were living with HIV (PLWH) in Florida at year-end 2016

### 21,214

persons were estimated as unaware of their HIV status in Florida at year-end 2016

### 4,972

persons were diagnosed with HIV in Florida in 2016

## HIV Testing

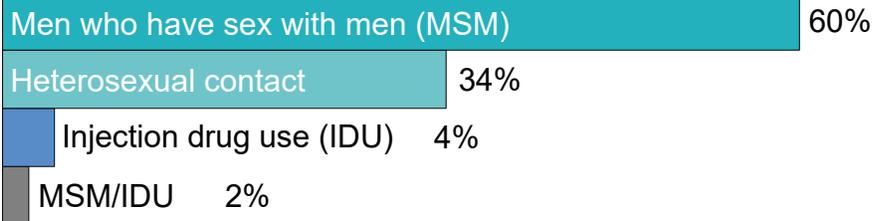

### 340,000+

HIV tests were conducted in Florida in 2016 at

### 1,400+

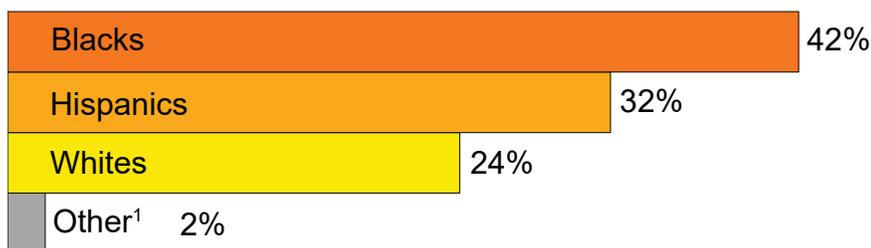

registered HIV test sites across the state

## Adults (age 13+) diagnosed with HIV in 2016 by mode of HIV exposure

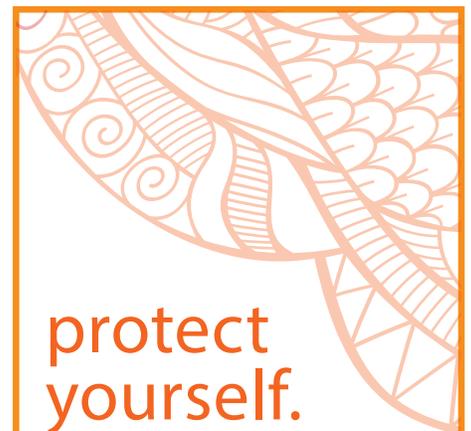

Other modes of exposure including hemophilia, blood transfusion, and no identified risk factor (N=6) not shown because they represent <1% of data.

## Blacks represented the highest proportion of adults (age 13+) diagnosed with HIV in 2016

HIV tests among Blacks have increased by 41% between 2006 and 2016 and HIV tests among Hispanics have increased by 16% during the same time period.

<sup>1</sup>Other includes American Indian/Alaska Native, Asian/Pacific Islander, and multi-racial.

## In Florida at the end of 2016:

**1 in 284**

**White** adults were living with HIV

**1 in 181**

**Hispanic** adults were living with HIV

**1 in 47**

**Black** adults were living with HIV

## Florida Health encourages Floridians to **Test Your Way** on National HIV Testing Day

### Rapid HIV Testing

All adolescents and adults (ages 13–64) should be tested for HIV at least once during their lifetime. Persons at increased risk for HIV should be tested **annually**. HIV antibody tests look for antibodies to HIV in your blood or oral fluid. With a rapid antibody point of care screening test, results are ready in **20 minutes or less**.

### Pre-Exposure Prophylaxis (PrEP)

For persons at increased risk for HIV, a pill (Truvada®) once daily, can reduce the risk of acquiring HIV by over **90%**. Condoms are still recommended during sex to prevent other sexually transmitted infections, which are increasing in Florida, and which can increase risk of acquiring HIV.

[www.preplocator.org](http://www.preplocator.org)

### Antiretroviral Therapy (ART)

For persons newly diagnosed with HIV, starting ART with a provider immediately after diagnosis improves health outcomes by preventing disease progression and reducing viral load, making transmission highly unlikely.
