Decision Algorithm to Assist with Testing and Monitoring of Patients with Suspected Ebola Virus Disease (EVD)
(Updated 8/18/14 – Please note this interim guidance is subject to change.)

**Epidemiological Risk Factors**

- **HIGH-RISK EXPOSURE**
  - Percutaneous or mucous membrane exposure or direct skin contact with body fluids of a person with confirmed or suspected EVD without appropriate personal protective equipment (PPE) **OR**
  - Laboratory processing of bodily fluids of suspected or confirmed EVD cases without appropriate PPE or standard biosafety precautions **OR**
  - Participation in funeral rites or other direct exposure to human remains in the geographic area where the outbreak is occurring without appropriate PPE

- **LOW-RISK EXPOSURE**
  - Persons who provided patient care or casual contact1 (without high-risk exposure) with EVD patients in healthcare facilities in EVD outbreak affected countries **OR**
  - Household member or other casual contact1 of an EVD patient **OR**
  - Persons who had direct unprotected contact with bats or primates from EVD-affected countries

**Clinical Criteria**

- **FEVER ≥101.5°F (38.6°C)** **AND/OR**
  - **ANY** compatible symptoms: severe headache, muscle pain, vomiting, diarrhea, abdominal pain, hiccups, **OR** unexplained hemorrhage **AND**
  - Unknown or abnormal blood work including: lymphocytopenia <1,000 cells/µL, thrombocytopenia <150,000 cells/µL **AND/OR** elevated hepatic transaminases

**EVD Suspected – Testing Indicated**

Immediately implement infection control measures **5,6**

Immediately report to your County Health Department or Bureau of Epidemiology at 850-245-4401 to authorize testing.

See back for references and additional recommendations

**EVD Not Currently Suspected – No Testing**

- High- or Low-Risk Exposures: Report to DOH to discuss the possible need for conditional release and movement restrictions **6**

**Casual contact** is defined as a) being within approximately 3 feet (1 meter) or within the room or care area for a prolonged period of time (e.g., healthcare personnel, household members) while not wearing recommended PPE (i.e., droplet and contact precautions) or b) having direct brief contact (e.g., shaking hands) with an EVD case while not wearing recommended PPE. At this time, brief interactions, such as walking by a person or moving through a hospital, do not constitute casual contact.
Additional Recommendations

Infection control recommendations 5,6:
• Standard, contact & droplet precautions, including gloves, fluid-resistant gowns, eye protection, face mask; additional PPE may be required
• Single patient room with private bathroom, door closed; restrict visitors
• Avoid aerosol-generating procedures
• Implement environmental infection control measures

Testing recommendations
• Conduct only essential laboratory testing, and take appropriate precautions according to laboratory recommendations4
• Include malaria diagnostics in initial testing as it is the most common cause of febrile illness in persons with travel history to affected countries
• Collect a minimum sample volume of 4 mL of blood in plastic tube; do not use pneumatic tube system for transport4; contact DOH to determine the proper category for shipment4

Follow-up recommendations for persons when EVD testing is not indicated.
• Self-monitor twice daily for fever and other symptoms for 21 days from last exposure
• Seek medical evaluation at first sign of illness
