Florida Influenza Surveillance

Week Ending January 1, 2005 (Week 52)

Angela Fix, MPH, Respiratory Disease Epidemiologist
Brittni Jones, Influenza Surveillance Coordinator

Summary

Influenza-like illness (ILI) activity increased across most of the state for the week ending January 1, 2005 (Week 52). However, many providers did not see any patients due to office closures for the holidays. Except for the Northcentral region, regional ILI activity levels were below baseline. Three County Health Departments reported localized ILI activity (Alachua, Palm Beach and Sarasota), while eleven County Health Departments (Brevard, Broward, Citrus, Collier, Duval, Escambia, Hillsborough, Marion, Pinellas, Seminole and Volusia) reported sporadic ILI activity during Week 52. Twenty-six counties reported no ILI activity and twenty-seven counties did not report an activity code.

Florida Influenza and Influenza-like Illness (ILI) Surveillance

Table 1 outlines the breakdown of specimen testing and weighted ILI activity by region. The overall weighted percent ILI activity for the state for the week ending January 1, 2005 was 2.45%. This increase from the previous week’s ILI activity of 1.97% is statistically significant (p = 0.01). The Northcentral region reported the highest influenza activity (5.22%) and the Northwest region reported the lowest influenza activity (0.31%); however, only half of the sentinels across the state had reported at the time this report was written.

During the previous three weeks, the Jacksonville Central and Tampa Branch laboratories received forty-two specimens for influenza testing. Of these specimens, twenty-one tested
positive (50.00%) for respiratory viruses: one isolate was influenza A H1N1, three isolates were influenza A H3N2, four isolates were influenza B Hong Kong, one isolate was influenza B Shanghai, eleven isolates were influenza B Unknown species and one isolate was Adenovirus.

Since October 3, 2004, the Jacksonville Central and Tampa Branch laboratories have tested 192 specimens, of which, 44 (22.92%) tested positive for respiratory viruses. Of the isolates positive for respiratory viruses: thirty-three were influenza B (75.00%), seven were influenza A (15.91%), three were Adenovirus (6.82%), and one was Parainfluenza (2.27%).

**Influenza-like Illness Graphs By Region**

- **Baseline**: A bar line that exceeds the baseline indicates moderate ILI activity
- **Threshold**: A bar line that exceeds the threshold indicates high ILI activity
Weekly Influenza Activity

Week ending January 1, 2005 - Week 52

Level of Influenza Activity by County

- No Activity
- Sporadic
- Localized
- Regional
- Widespread
- No Report

Influenza Surveillance – Definitions and Reminders

Influenza Surveillance Regions

**Centraeast**: Brevard, Indian River, Lake, Martin, Orange, Osceola, Seminole, St. Lucie and Volusia.

**Centralwest**: Citrus, Hardee, Hernando, Hillsborough, Manatee, Pasco, Pinellas, Polk and Sumter.

**Northeast**: Alachua, Baker, Bradford, Clay, Duval, Flagler, Gilchrist, Levy, Marion, Nassau, Putnam, St. Johns and Union.

**Northwest**: Bay, Calhoun, Escambia, Gulf, Jackson, Okaloosa, Santa Rosa, Walton and Washington.

**Southeast**: Broward, Miami-Dade, Monroe and Palm Beach.

**Southwest**: Charlotte, Collier, Desoto, Glade, Hendry, Highlands, Lee, Okeechobee and Sarasota.

**Definitions of the influenza activity codes**

**No Activity**: No laboratory-confirmed cases of influenza and no reported increase in the number of cases of ILI.

**Sporadic**: Small numbers of laboratory-confirmed influenza cases or a single influenza outbreak has been reported, but there is no increase in cases of ILI.

**Local**: Outbreaks of influenza or increases in ILI cases and recent laboratory-confirmed influenza in a single region of the state.

**Regional**: Outbreaks of influenza or increases in ILI cases and recent laboratory-confirmed influenza in at least two but less than half the regions of the state.

**Widespread**: Outbreaks of influenza or increases in ILI cases and recent laboratory-confirmed influenza in at least half the regions of the state.

**Important Reminders**

* Influenza activity reporting by sentinel providers is voluntary.

* The influenza surveillance data is used to answer the question of where, when, and what viruses are circulating. It can be used to determine if influenza activity is increasing or decreasing, but it cannot be used to ascertain how many people have become ill with influenza so far this season.

* Reporting is incomplete for this week. Numbers may change as more reports are received.
