Summary

The Florida Department of Health (FDOH) uses many different surveillance systems to measure influenza activity. A summary of all these systems can be found on page 11.

Enterovirus D68 activity:
- Enterovirus D68 (EV-D68) is one of more than 100 non-polio enteroviruses. This virus was first identified in California in 1962. The U.S. is currently experiencing a nationwide outbreak of enterovirus D68 (EV-D68) associated with severe respiratory illness.
- On October 6th, 2014, the Florida Department of Health (FDOH) was notified of the first positive test for EV-D68 in a 10 year old Polk County resident. The patient was initially hospitalized for respiratory illness but has since recovered and is in good condition.

National Influenza activity:
- Influenza activity continues to increase nationally.
- The Centers for Disease Control and Prevention continue to recommend vaccination as long as influenza viruses are circulating.

State Influenza and ILI activity:
- Most Florida counties are reporting mild influenza activity. In week 40, 28 counties reported increasing influenza activity; 35 counties indicated activity is at a plateau.
- Emergency department (ED) and urgent care center (UCC) influenza-like illness (ILI) visits have remained low but are increasing in all regions, which is typical for this time of year.
- In Florida, the most common influenza subtype detected at the Bureau of Public Health Laboratories (BPHL) in recent weeks has been influenza B. In week 40, 11 of 48 specimens submitted for influenza testing at BPHL were PCR positive for influenza. Seven were PCR positive for influenza B and four for influenza A (H3). These are seasonal strains of influenza.
- No influenza or ILI outbreaks (epidemiologically-linked cases of influenza in a single setting) were reported to EpiCom in week 40.
- No pediatric influenza-associated deaths were reported in week 40.
- The preliminary estimated number of Florida deaths due to pneumonia or influenza in week 38 were below excess thresholds.
- Because of mild influenza activity in some areas of the state, Florida reported sporadic influenza activity to CDC in week 40. This activity level represents the geographic spread of influenza in Florida.

**TABLE 1: Summary of Florida Influenza-Like Illness (ILI) Activity for Week 40**

---

**ILINet Influenza-Like Illness-Statewide**

ILINet is a nationwide surveillance system composed of sentinel providers. Florida has 107 providers enrolled in ILINet who submit weekly ILI and total visit counts, as well as submit ILI specimens to the BPHL for confirmatory testing. For this season, the Bureau of Epidemiology (BOE) has designated 13 of these ILINet physicians’ offices as Super-Sentinels. These Super-Sentinels receive more active follow-up from BOE and participating county health departments (CHDs), with the goal of increasing data quality and surveillance specimen submission.

**FIGURE 1** shows the percentage of visits for ILI* reported by ILINet sentinel providers statewide.

The percent of visits to ILINet sentinel outpatient physicians for ILI is below levels seen at this time in previous years:

- Fifty-four of 107 ILINet providers reported visit counts as of 5:00 p.m., October 7, 2014.
- Eight of 13 ILINet Super-Sentinels reported visit counts as of 5:00 p.m., October 7, 2014.

**FIGURE 2** shows ILI visit counts reported by ILINet sentinel providers statewide by age group.

In week 40, the number of visits to ILINet sentinel ILI decreased in the 0-4 and 25-64 age groups, and increased in the 5-24 and 65+ age groups.

†Data presented here are counts, not proportions as included in Figure 1. This is because age group denominator data is not available through ILINet.

*ILI = Influenza-like illness, fever >100°F AND sore throat and/or cough in the absence of another known cause.
ESSENCE-FL Syndromic Surveillance-Statewide

ESSENCE-FL collects data daily from 216 EDs and UCCs. These data are processed into 11 different syndrome categories based on the patient's chief complaint. One of the categories is ILI, which is composed of chief complaints that include the words "influenza" or "flu," or complaints that contain fever plus cough or sore throat.

**FIGURE 3** shows ESSENCE-FL data on ILI visits to EDs and UCCs as a percentage of all visits.

The percent of visits to EDs and UCCs for ILI is slightly above levels seen in previous years at this time.

**FIGURE 4** shows percentage of ILI among all ED and UCC visits by age.

The percent of ED and UCC visits for ILI is similar to previous years at this time.

ESSENCE-FL Syndromic Surveillance-Regional

Map 3: Emergency Departments and Urgent Care Centers Reporting Data to ESSENCE-FL by Regional Domestic Security Task Force (RDSTF), October 8, 2014 (N=216)
FIGURE 5 - FIGURE 11 describe ED and UCC chief complaint data from ESSENCE-FL by Regional Domestic Security Task Force (RDSTF) regions.

- The percent of ED and UCC visits for ILI is near expected levels in most regions.
- ED and UCC visits for ILI in RDSTF Regions 1-6 are at or near levels seen during previous years at this time.
- ED and UCC visits for ILI in RDSTF Regions 7 are higher than levels seen during previous years at this time.

*There is no week 53 for the 2010-2011, 2011-2012, and 2013-2014 seasons; the week 53 data point for those seasons is an average of weeks 52 and 1.*
Influenza A (H3) and influenza B have been identified by BPHL this season.

In recent weeks, influenza specimens submitted to BPHL tested positive for influenza B and influenza A unspecifed.

Influenza B has been the most common strain of influenza detected by BPHL so far in the first week of the 2014-2015 influenza season.

Table 2 shows the number of specimens tested by BPHL, how many are influenza positive and their subtypes.

FIGURE 12 - FIGURE 13 use BPHL viral surveillance data to track the progress of influenza infection over time. They include weekly information on how many specimens are tested by the BPHL, what proportion of those test positive for influenza and what subtypes are identified.
As of 11:30 a.m. October 8, 2014, a total of 67 (100%) counties reported their weekly level of influenza activity. Please note that data reported by counties after the deadline Tuesday at 5 p.m. are recorded but may not be included in the activity map for previous weeks.

Five counties reported moderate activity.

Twenty-eight counties reported increasing influenza and ILI activity.

County influenza activity data are reported to BOE through EpiGateway on a weekly basis by each county influenza coordinator. Specific information is requested about laboratory results, outbreak reports and surveillance system activity. Figures 14-23, displayed below, reflect a county's assessment of influenza activity within their county as a whole as well as influenza activity within specific settings. For week 40, no counties indicated that activity was decreasing, 35 indicated activity was about the same as previous weeks and 28 indicated that activity was increasing.

FIGURE 14: Assessment of Overall Influenza Activity Trend

FIGURE 14 shows the assessment of the overall influenza activity trend in each county as reported by CHD influenza coordinators for week 40 as of 11:30 a.m. October 8, 2014.
Counties are asked to evaluate influenza activity in certain settings within their county. Each setting has a scale for activity that ranges from none or minimal activity to very high activity. What defines each of the values varies by facility type, but the example of the assessment in elementary, middle and high schools is included below. More detailed information on the meanings of the levels for each setting can be found on the webpage also included below.

No or very minimal activity -- Scattered cases ofILIwith no increase in absenteeism or disruption of school activities.

Moderate activity -- Absenteeism elevated above baseline (in range of 10 to 25%) in some but fewer than half of schools where it is known; occasional children sent home because of ILI.

High activity -- Absenteeism elevated above baseline (in range of 10 to 25%) in more than half of schools; most schools sending several or many children home each day because of ILI.

Very high activity -- Absenteeism high enough to force curtailment of some or all school activities.

**FIGURE 15 - FIGURE 18** show the activity levels in various facilities by county as reported by CHD influenza coordinators for week 40 as of 11:30 a.m., October 8, 2014.
FIGURE 19 - FIGURE 23 show the activity levels in various facilities by county as reported by CHD influenza coordinators for week 40 as of 11:30 a.m., October 8, 2014.

No influenza-associated pediatric deaths have been reported so far in week 40, the first week of the 2014-2015 influenza season.
FDOH Bureau of Vital Statistics and county health departments (CHDs) collect death record data electronically in all 67 Florida counties, which can be accessed using ESSENCE-FL. For pneumonia and influenza surveillance, death record literals are queried in ESSENCE-FL using a free-text query that searches for references to pneumonia and influenza on death certificates. Any mention of pneumonia or influenza in the death certificate literals, with certain exceptions, is counted as a pneumonia and influenza death. Current season pneumonia and influenza death numbers are preliminary estimates, and may change as more data are received. The most recent data available are displayed here. ESSENCE-FL vital statistics death records data are currently considered to be complete through week 38, 2014.

**FIGURE 24** shows the count of preliminary estimated pneumonia and influenza deaths for all Florida counties, the number of deaths predicted using a multi-year regression model and the upper bound of the 95% confidence interval for this prediction.

For week 38 (ending Sept 27, 2014):
- 140 preliminary estimated pneumonia and influenza deaths were reported.
- Upper bound of 95% confidence interval for prediction: 184 deaths.
- No excess deaths.

**FIGURE 25** shows pneumonia and influenza deaths for all Florida counties, week 40, 2012 - week 40 2014, as reported into ESSENCE-FL. Deaths due to pneumonia and influenza are at levels seen during previous years at this time.

**FIGURE 26** shows pneumonia and influenza deaths for all Florida counties by age group, week 40, 2010 - week 40, 2014, as reported into ESSENCE-FL.

* Death records data reported into ESSENCE-FL are currently considered to be complete through week 38, 2014.
The National Respiratory and Enteric Virus Surveillance System (NREVSS) collects data from laboratories around the country on a weekly basis. NREVSS monitors temporal and geographic patterns of six common respiratory viruses. Eight Florida facilities reported in week 40.

**FIGURE 27** shows the percentage of positive tests for multiple respiratory viruses reported by NREVSS-participating laboratories in Florida.

The 6 respiratory viruses summarized in Figure 27 are:
- Respiratory Syncytial Virus (RSV)
- Parainfluenza 1-3
- Adenovirus
- Human Metapneumovirus (HMPV)
- Rhinovirus
- Influenza

### Influenza and ILI Outbreaks Reported in EpiCom

In week 40, 2014, no influenza or ILI outbreaks were reported in to EpiCom.

Map 6: Influenza and ILI outbreaks by county, Week 40, 2014 as Reported by 11:30 a.m., October 8, 2014

No influenza or ILI outbreaks have been reported into EpiCom so far in the 2013-2014 season.
### Florida ILI Surveillance System Summary

**Florida ILINet**
*Measures trends in ILI visits to outpatient doctor’s offices*
- Network of volunteer healthcare providers who:
  - Report ILI and total visit counts every week
  - Submit specimens for confirmatory testing

**ESSENCE-FL Syndromic Surveillance**
*Measures trends in ILI visits and hospital admissions from emergency departments and urgent care clinics*
- EDs and UCCs electronically transmit visit data into ESSENCE-FL daily
- Visit data summarized in the Florida Flu Review include:
  - Percent of ED/urgent care visits due to ILI
  - Percent of ED/urgent care visitors with ILI who are admitted to the hospital

**ESSENCE-FL Vital Statistics Portal**
*Measures influenza mortality by using death certificates with pneumonia or influenza listed as a cause of death.*
- Death certificate data from the Bureau of Vital Statistics can be accessed through ESSENCE-FL and are used for pneumonia and influenza mortality surveillance

**County Influenza Activity in EpiGateway**
*Uses data provided by CHDs to create a county-by-county breakdown of influenza and ILI activity around the state*
- CHD epidemiologists report their county’s influenza and ILI surveillance data weekly into the EpiGateway website
- Influenza activity is classified as: No Activity, Mild, Moderate or Widespread
- Setting-specific influenza activity and influenza trend is also reported

**Outbreak Reporting in EpiCom**
*Tracks influenza and ILI outbreak investigations by CHDs and shows what types of influenza are responsible for outbreaks and where outbreaks are occurring*
- CHD epidemiologists report outbreaks of influenza or ILI into EpiCom, Florida’s online disease communication system
- Outbreaks are defined as two or more cases of influenza or ILI in a specific setting

**BPHL**
- BPHL performs confirmatory testing and subtyping on surveillance specimens from ILINet sentinel providers, outbreak investigations, patients with severe or unusual influenza presentations and medical examiners

**Case-Based Influenza Surveillance**
*Pediatric Influenza-Associated Mortality*
- Deaths in children with laboratory-confirmed influenza infection are reportable in Florida

**National Respiratory and Enteric Virus Surveillance System (NREVSS)**
*Measures trends in different viruses that cause respiratory disease*
- Network of laboratories who report counts of test results for common respiratory viruses, including influenza, RSV, rhinovirus and others
