Arbovirus surveillance in Florida includes endemic viruses West Nile virus (WNV), Eastern equine encephalitis virus (EEEV), St. Louis encephalitis virus (SLEV), and Highlands J virus (HJV) and imported viruses such as Dengue virus (DENV) and California encephalitis group viruses (CEV). During the period January 24-30, 2010, the following arboviral activity was recorded in Florida:

**EEEV activity:** No activity has been reported this week. In 2010, positive samples from three sentinel chickens and one live wild bird have been received. To date, three of Florida’s 67 counties have reported EEEV activity.

**WNV activity:** No activity has been reported.

**HJV activity:** No activity has been reported.

**Advisories/Alerts:** Monroe County is under a mosquito-borne illness advisory.

### Veterinary Cases

No positive horses were reported this week.
Sentinel Chickens

No positive sentinels reported this week

Sentinel Seroconversions to EEEV in North and Panhandle Florida, 2009-2010

Live Wild Birds

No positive live wild birds were reported this week.

Dead Birds

The Fish and Wildlife Conservation Commission (FWC) collects reports of dead birds, which can be an indication of arbovirus circulation in an area. This week, four reports representing 32 dead birds
were received from four counties. None were identified as crows, jays, or raptors. In 2010, 23 reports representing a total of 79 dead birds (0 crows, 0 jays, 8 raptors, 71 others) have been received from 17 of Florida's 67 counties. Please note that FWC collects reports of birds that have died from a variety of causes, not only arboviruses. Dead birds should be reported to www.myfwc.com/bird/.
