Mosquito-Borne Illness Advisory

JACKSONVILLE, FL– The Duval County Health Department (DCHD) is emphasizing the importance of protection against mosquito-borne diseases after laboratory tests confirmed a 62-year-old female Duval County resident had been hospitalized for West Nile Virus Disease. The individual has since been released from the hospital and is recovering from the illness. This is the first confirmed human case in the county since 2011.

West Nile Virus is a mosquito-borne illness. It is not spread from person to person. The symptoms of West Nile Virus include, fever, rash, headache, fatigue, weakness and dizziness. There is no specific medication or vaccine for West Nile Virus. Residents experiencing symptoms common to West Nile Virus should call their healthcare provider to see if they need to be seen. Physicians should contact DCHD if they suspect an individual may have a mosquito-borne illness.

To protect yourself from mosquitoes, you should remember “Drain and Cover”:

**DRAIN standing water to stop mosquitoes from multiplying**
- **Drain** water from garbage cans, house gutters, buckets, pool covers, coolers, toys, flower pots or any other containers where sprinkler or rain water has collected.
- **Discard** old tires, drums, bottles, cans, pots and pans, broken appliances and other items that aren't being used.
- **Empty and clean** birdbaths and pet's water bowls at least once or twice a week.
- **Protect** boats and vehicles from rain with tarps that don’t accumulate water.
- **Maintain** swimming pools in good condition and appropriately chlorinated. Empty plastic swimming pools when not in use.

**COVER skin with clothing or repellent**
- **CLOTHING** - Wear shoes, socks, and long pants and long-sleeves. This type of protection may be necessary for people who must work in areas where mosquitoes are present.
- **REPELLENT** - Apply mosquito repellent to bare skin and clothing.
  - Always use repellents according to the label. Repellents with DEET(N,N-diethyl-m-toluamide), picaridin, oil of lemon eucalyptus, and IR3535 are effective.
  - Use mosquito netting to protect children younger than 2 months old.

**COVER doors and windows with screens to keep mosquitoes out of your house**
- Repair broken screening on windows, doors, porches, and patios.

- continued -
Tips on Repellent Use

- Always read label directions carefully for the approved usage before you apply a repellent. Some repellents are not suitable for children.

- Products with concentrations of up to 30 percent DEET are generally recommended. Other US Environmental Protection Agency-approved repellents contain Picaridin, oil of lemon eucalyptus, or IR3535. These products are generally available at local pharmacies. Look for active ingredients to be listed on the product label.

- Apply insect repellent to exposed skin, or onto clothing, but not under clothing.

- In protecting children, read label instructions to be sure the repellent is age-appropriate. According to the CDC, mosquito repellents containing oil of lemon eucalyptus should not be used on children under the age of three years. DEET is not recommended on children younger than two months old.

- Avoid applying repellents to the hands of children. Adults should apply repellent first to their own hands and then transfer it to the child's skin and clothing.

- If additional protection is necessary, apply a permethrin repellent directly to your clothing. Again, always follow the manufacturer’s directions.

DOH continues to conduct statewide surveillance for mosquito borne illnesses, including West Nile virus infections, Eastern equine encephalitis, St. Louis encephalitis, malaria, and dengue. Residents of Florida are encouraged to report dead birds via the web site for Surveillance of Wild-bird Die-offs located at http://www.myfwc.com/bird/. For more information, visit DOH’s Environmental Public Health website at http://www.doh.state.fl.us/Environment/medicine/arboviral/index.html or call your DCHD at 904-253-1850.
