

### Florida Arbovirus Surveillance Week 6: February 5-11, 2023

Arbovirus surveillance in Florida includes endemic mosquito-borne viruses such as West Nile virus (WNV), Eastern equine encephalitis virus (EEEV), and St. Louis encephalitis virus (SLEV), as well as exotic viruses such as dengue virus (DENV), chikungunya virus (CHIKV), Zika virus (ZIKV) and California encephalitis group viruses (CEV). Malaria, a parasitic mosquito-borne disease is also included. During the period of February 5-11, 2023, the following arboviral activity was recorded in Florida.

This report contains information for 2022 and 2023.

**WNV activity:** No human cases of WNV infection were reported this week. No horses with WNV infection were reported this week. No sentinel chickens tested positive for antibodies to WNV this week. No mosquito pools tested positive for WNV this week. In 2022, positive samples from six humans, five horses, 467 sentinel chickens, and eight mosquito pools have been reported from 27 counties. In 2023, a positive sample from one horse has been reported from one county.

**SLEV activity:** No human cases of SLEV infection were reported this week. No sentinel chickens tested positive for antibodies to SLEV this week. In 2022, 18 positive samples have been reported from 11 counties.

Flavivirus (WNV or SLEV)\* activity: No sentinel chickens tested positive for antibodies to a flavivirus this week. In 2022, positive samples from six sentinel chickens have been reported from five counties.

**EEEV activity:** No human cases of EEEV infection were reported this week. One horse with EEEV infection was reported this week in Lake County. No sentinel chickens tested positive for antibodies to EEEV this week. In 2022, positive samples from 72 sentinel chickens and 11 horses have been reported from 24 counties. In 2023, positive samples from four sentinel chickens and one horse have been reported from four counties.

**International Travel-Associated Dengue:** Eighteen cases of dengue were reported this week in persons that had international travel. In 2022, 903 travel-associated dengue cases have been reported. In 2023, 19 travel-associated dengue fever cases have been reported.

**Dengue Cases Acquired in Florida:** No cases of locally acquired dengue were reported this week. In 2022, 68 cases of locally acquired dengue have been reported. In 2023, one case of locally acquired dengue has been reported.

**International Travel-Associated Chikungunya Fever Cases:** No cases of chikungunya fever were reported this week in persons that had international travel. In 2022, no travel-associated chikungunya fever cases have been reported.

**Chikungunya Fever Cases Acquired in Florida:** No cases of locally acquired chikungunya fever were reported this week. In 2022, no cases of locally acquired chikungunya fever have been reported.

**International Travel-Associated Zika Fever Cases:** No cases of Zika fever were reported this week in persons that had international travel. In 2022, no travel-associated Zika fever cases have been reported.

**Zika Fever Cases Acquired in Florida:** No cases of locally acquired Zika fever were reported this week. In 2022, no cases of locally acquired Zika fever have been reported.

Advisories/Alerts: Miami-Dade County is currently under a mosquito-borne illness alert. No other counties are currently under a mosquito-borne illness advisory or alert.

There are currently multiple travel health notices from the Centers for Disease Control and Prevention related to mosquito-borne diseases.

	Dengue		Yellow Fever	Japanese Encephalitis
Africa and the Middle East	Americas	Asia and the Pacific Islands	Africa and the Middle East	Oceania
São Tomé and Príncipe	Colombia	Afghanistan	Ghana	Australia
Somalia	Cuba	Bangladesh	Kenya	
Sudan	Dominican Republic	India	Nigeria	
	El Salvador	Laos		
	Guatemala	Malaysia		
	Honduras	Myanmar (Burma)		
	Nicaragua	Nepal		
	Panama	Pakistan		
	Peru	Philippines		
		Singapore		
		Sri Lanka		
		Vietnam		

Level 1 Travel Health Notice, Level 2 Travel Health Alert: wwwnc.cdc.gov/travel/notices. For a map of arboviral disease activity in the United States visit: wwwn.cdc.gov/arbonet/maps/ADB\_Diseases\_Map/index.html.

### 2022-2023 Human Case Summary

**2022 West Nile Virus Illnesses Acquired in Florida**: Six human cases of WNV illness acquired in Florida have been reported in 2022 from Volusia (July, August), Sarasota (September), Hillsborough (October), St. Johns (October), and Escambia (November) counties.

**2022** International Travel-Associated Dengue Cases: Nine hundred and three cases with onset in 2022 have been reported in individuals with travel history to a dengue endemic area in the two weeks prior to onset. Counties reporting cases were: Alachua, Brevard (2), Broward (57), Charlotte, Collier (12), Duval (9), Escambia (2), Flagler (2), Hendry (3), Hernando (2), Hillsborough (79), Indian River, Lake, Lee (30), Leon, Manatee (2), Martin (2), Miami-Dade (606), Monroe (4), Orange (16), Osceola (5), Palm Beach (28), Pasco (3), Pinellas (7), Polk (8), Santa Rosa, Sarasota (5), St. Johns, St. Lucie (8), Suwannee (2), and Volusia (2). Twelve cases were reported in non-Florida residents. Twelve cases met the criteria for severe dengue (dengue shock syndrome [DSS] or dengue hemorrhagic fever [DHF]). Those at greater risk for DSS and DHF include persons with previous dengue infection, pregnant women, infants, the elderly, and those with co-morbidities. However, severe illness can also occur in those without any of these risk factors. In 2022, 786 cases of dengue reported in Florida have been serotyped by PCR. Please see the table below for a breakdown of case by country of origin and serotype.

Country of Exposure	DENV-1	DENV-2	DENV-3	DENV-4	DENV-1/ DENV-2	DENV-1/ DENV-3	DENV-2/ DENV-3	Unknown	Total
Bangladesh			1					1	2
Brazil	7							2	9
Caribbean			1						1
Colombia	2								2
Costa Rica	1							1	2
Cuba	43	90	538	47	2	4	1	101	826

Guyana			1						1
Haiti	1								1
Honduras				1				1	2
India		3	1					1	5
Jamaica			1						1
Maldives		1							1
Mexico	6	3	1					1	11
Nicaragua				3				2	5
Pakistan	2		1						3
Panama	1							1	2
Puerto Rico	6							1	7
Sri Lanka			1					1	2
Uruguay								1	1
Total	74	107	546	52	2	4	1	117	903

**2022 Dengue Cases Acquired in Florida:** In 2022, 68 cases of locally acquired dengue have been reported in Collier, Broward (2), Miami-Dade (64), and Volusia counties, with onsets in June, July (5), August (18), September (10), October (18), November (11), and December (5). One case was reported in a non-Florida resident. Sixty of the cases have been serotyped by PCR. Serotypes reported were DENV-3 (57), DENV-4 (2), and DENV-2.

**2023 International Travel-Associated Dengue Cases:** Nineteen cases with onset in 2023 have been reported in individuals with travel history to a dengue endemic area in the two weeks prior to onset. Counties reporting cases were: Broward, Duval, Hendry, Hillsborough (4), Miami-Dade (11), and Orange. In 2023, nineteen cases of dengue reported in Florida have been serotyped by PCR. Please see the table below for a breakdown of case by country of origin and serotype.

Country of Exposure	DENV-1	DENV-2	DENV-3	Total
Brazil	1			1
Cuba	1	1	15	17
India			1	1
Total	2	1	16	19

**2023 Dengue Cases Acquired in Florida:** In 2023, one case of locally acquired dengue has been reported in Miami-Dade County, with onset in January. The serotype was DENV-3.

**2022** International Travel-Associated Malaria Cases: Sixty-three cases of malaria with onset in 2022 have been reported. Countries of origin were: Brazil (3), Cameroon (3), Central African Republic, Côte D'Ivoire, Democratic Republic of the Congo, Ethiopia (3), Equatorial Guinea (2), Ghana (5), Guinea (2), Guyana, India, Kenya, multiple countries (6), Nicaragua (6), Nigeria (14), Pakistan (2), Sierra Leone (4), Solomon Islands, Sudan, Uganda (3), Venezuela, and Zambia. Counties reporting cases were: Brevard, Broward (8), Duval (6), Flagler (3), Hillsborough (7), Lake, Lee (4), Leon, Manatee, Miami-Dade (10), Nassau, Orange (5), Palm Beach (6), Pasco (2), Pinellas (2), Sarasota (2), Santa Rosa, and St. Johns (2). Nine cases were reported in non-Florida residents.

Thirty-five cases (56%) were diagnosed with *Plasmodium falciparum*. Twenty-five cases (40%) were diagnosed with *Plasmodium vivax*. Three cases (5%) were diagnosed with *Plasmodium malariae*.

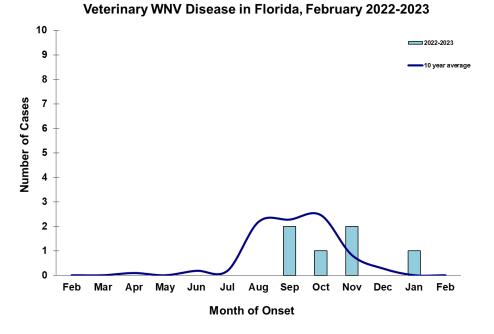

**2023 International Travel-Associated Malaria Cases:** Three cases of malaria with onset in 2023 have been reported. Countries of origin were: Burundi, Côte D'Ivoire, and Ghana. Counties reporting cases were: Leon, Miami-Dade, and Pinellas. One case was reported in a non-Florida resident.

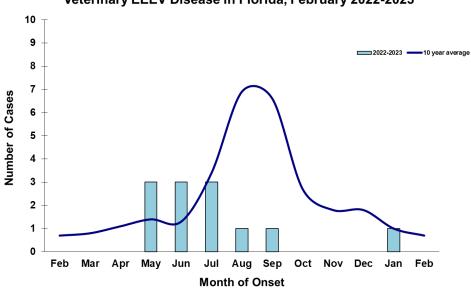

Three cases (100%) were diagnosed with *Plasmodium falciparum*.

## Veterinary Cases\*\*

\*\*Veterinary cases are reported by date of onset. Only mammalian veterinary cases are included in the graphs.

One horse with EEEV infection were reported this week in Lake County.

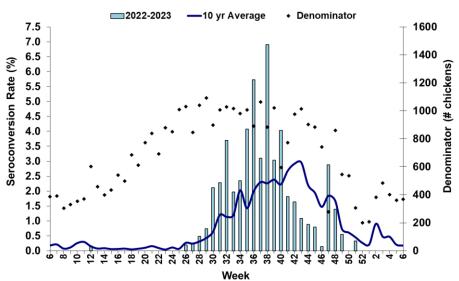

Veterinary EEEV Disease in Florida, February 2022-2023

### **Sentinel Chickens**

The table below is for the reporting of confirmatory laboratory results from this week. Some of the samples were collected at earlier dates. The date of collection is recorded for samples collected on that day along with the total number of positives and the corresponding seroconversion rate for the week the sample was collected.

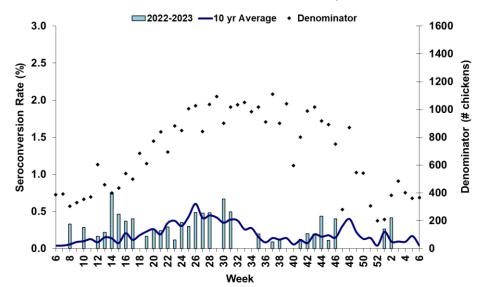

No sentinel chickens tested positive for antibodies to SLEV, WNV, EEEV or HJV this week.

				Seroco	nversion	Rates (S	%)		County Totals	
County	Collection Date	Flavi	SLEV	WNV	Alpha	EEEV	HJV	Collection Week	YTD

County	Collection Date	Result	Species	County YTD
		Dead Bird	ls	

Macquita Boola

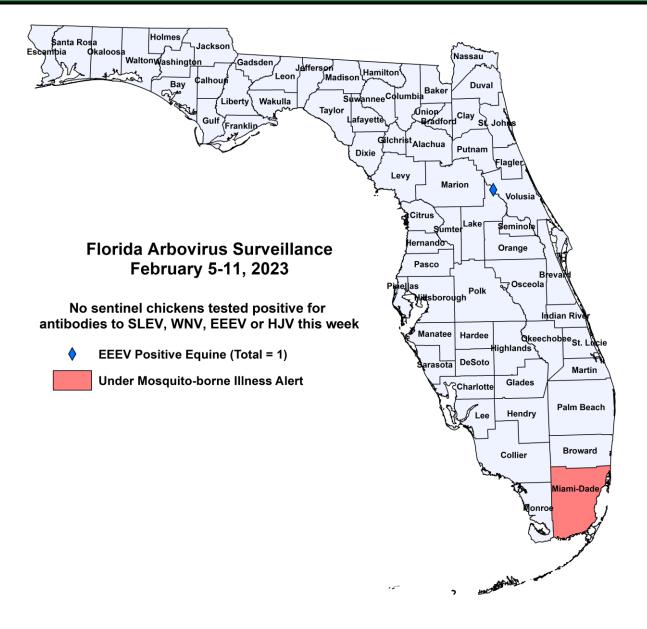

The Fish and Wildlife Conservation Commission (FWC) collects reports of dead birds, which can be an indication of arbovirus circulation in an area. This week, 23 reports representing a total of 50 dead birds, including 10 crows, one jay, and one raptor, were received from 13 counties.

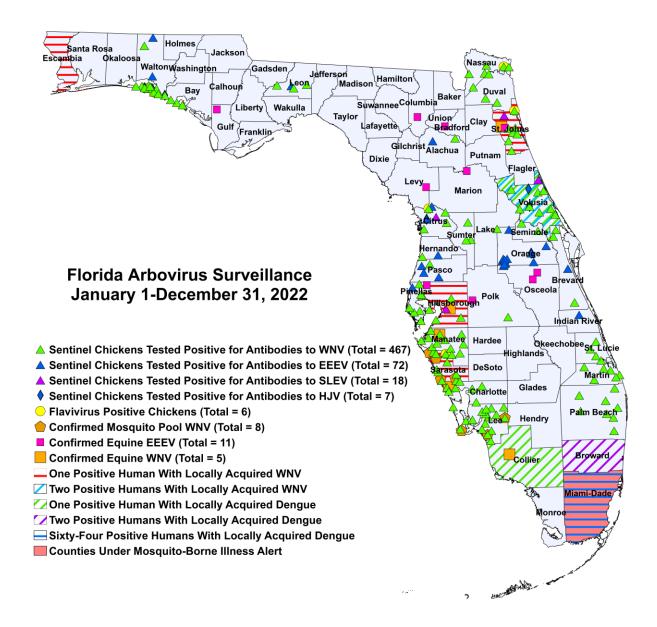

In 2023, 131 reports representing a total of 301 dead birds (11 crow, 3 jays, 15 raptors, 2 doves) were received from 35 of Florida's 67 counties.

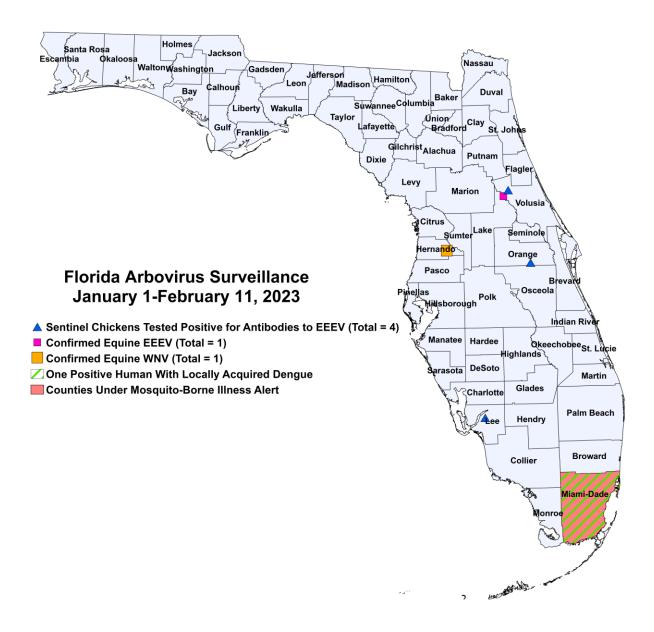

2023

County	Total Dead Birds	Crows	Jays	Raptors	Doves

Osceola		2 EEEV (5/24, 5/26)		
Palm Beach			26 WNV (8/15, 8/29, 9/12, 9/13, 9/20, 9/26, 10/3, 10/24, 10/25, 11/29) 1 SLEV (8/29)	
Pasco			1 WNV (7/25) 3 EEEV (4/11, 8/29, 10/23)	
Pinellas			28 WNV (7/25, 8/1, 8/8, 9/6, 9/12, 9/19, 9/26, 10/17, 10/31, 11/21, 12/5) 1 EEEV (3/7)	
Polk		1 EEEV (6/19)	1 WNV (9/26)	
Sarasota	1 WNV (September)	1 WNV (8/28)	51 WNV (7/15, 7/22, 7/26, 7/29, 8/2, 8/5, 8/9, 8/15, 8/16, 8/19, 8/26, 8/30, 9/2, 9/7, 9/9, 9/13, 9/16, 9/20, 9/23, 10/17, 11/22) 3 SLEV (8/26, 9/9, 10/21) 1 Flavivirus (6/7)	5 WNV mosquito pools ( <i>Cx.</i> <i>quinquefasciatus</i> [7/20, 7/27, 9/8,9/12])
Seminole			3 WNV (8/22, 8/29, 9/19) 1 SLEV (8/22)	
St. Johns	1 WNV (October)	1 EEEV (7/5) 1 WNV (10/25)	17 WNV (7/25, 8/8, 8/15, 8/29, 9/6, 9/12, 9/19, 10/17, 11/7) 2 SLEV (10/24) 1 Flavivirus (9/6)	
St. Lucie			8 WNV (9/22, 9/27, 10/5, 10/7, 10/26, 11/17)	
Sumter			4 WNV (8/8, 8/15, 9/12, 10/24, 11/2) 1 SLEV (9/6)	
Volusia	2 WNV (July, August) 1 dengue (September)		21 WNV (7/11, 7/25, 8/8, 8/15, 9/6, 9/12, 9/26, 10/3, 10/10, 10/17) 3 EEEV (2/21, 6/27, 11/14) 1 SLEV (9/6) 2 HJV (5/23, 11/7)	

County	Humans	Equines	Sentinel Chickens	Other
			44 WNV (7/25, 8/8, 8/15, 8/22,	
			8/29, 8/31, 9/6, 9/12, 9/19, 10/10,	
			10/17, 10/24, 10/31, 11/7)	
			14 EEEV (4/4, 5/9, 6/13, 6/20,	
Walton			6/27, 7/5, 7/11, 7/13, 7/25, 8/1,	
			10/10, 10/18)	
			1 SLEV (3/21)	
			3 HJV (6/20, 7/25, 9/26)	
			2 Flavivirus (3/21, 8/22)	

\*Six chickens in 2022 have tested positive for flavivirus antibodies and require additional specialized testing to distinguish between WNV and SLEV antibodies. Testing is currently delayed due to supply chain issues. The final determination of these birds will be updated as more information becomes available. In Florida, both WNV and SLEV have similar disease vectors and epidemiology. Seroconversion rates for flavivirus are included in the table.

### 2023 Arbovirus Activity by County

County	Humans	Equines	Sentinel Chickens	Other
Hernando		1 WNV (1/6)		
Lake		1 EEEV (1/29)		
Lee			1 EEEV (1/9)	
Miami-Dade	1 dengue (January)			
Orange			1 EEEV (1/17)	
Volusia			2 EEEV (1/17, 1/23)

# For more surveillance information, please see the DOH website at: www.floridahealth.gov/diseases-and-conditions/mosquito-borne-diseases/surveillance.html

# For arbovirus surveillance information for the United States, please see the Centers for Disease Control and Prevention website at: www.cdc.gov/ncidod/dvbid/westnile/surv&control.htm

Case tallies included in the weekly Florida arbovirus surveillance report include confirmed and probable cases for EEE, WNV infection, SLE, dengue, chikungunya, and malaria by date of onset. Suspect cases are not included. Activity is mapped by county of exposure rather than county of residence. Case definitions being used in Florida are consistent with national criteria provided by the Council of State and Territorial Epidemiologists (CSTE) and may be viewed at: www.floridahealth.gov/diseases-and-conditions/disease-reporting-and-management/disease-reporting-and-surveillance/index.html. Case tallies reported by CDC do not include suspect cases and cases are reported by patient state of residence rather than where the exposure occurred. Data is provided by county health departments, Department of Health Bureau of Public Health Laboratories, Department of Agriculture and Consumer Services, mosquito control agencies, Florida Fish and Wildlife Conservation Commission, medical providers and veterinarians. Equine cases are provided by the Department of Agriculture and Consumer Services.
