Notice of Proposed Changes in 64E-5, Florida Administrative Code

***Majority of Changes are Regarding the Medical Use of Radioactive Materials
or Radiation From Radioactive Materials***

The U.S. Nuclear Regulator Commission (NRC) requires Agreement States to be compatible with the federal regulations regarding the use of radioactive materials. We are changing out regulations to meet this compatibility requirement. This notice is to provide you additional notice of these changes. The rule text will be published in the October 2, 2009, Volume 35 Number 39 of the Florida Administrative Weekly which may be accessed at www.flrules.org/bigdoc/default.asp.

We have attempted to change Florida regulations so that you will not need to amend your radioactive materials license to meet any regulatory changes and to have as little impact on your daily operations as possible.

No specific actions or written response is required. If you have any questions, please contact Michael Stephens, Program Consultant at 850-245-4266 or Paul Vause, Administrator at 850-245-4545.
