Maybe she’s more than cranky?

Sick babies should be home.

Your baby may have the flu if:
• In addition to coughing or sneezing, she’s suffering from a fever, headache, chills or body aches.
• It came on suddenly.

The flu is most contagious early in the illness.
If you believe your baby is coming down with the flu, they should stay home. Keep hands clean, and coughs and sneezes covered. Consider seeing your health care provider.

Prevent the flu—it’s in your hands!
• At six-months of age, your baby can have a flu vaccine—followed by yearly flu vaccines.
• Wash your hands often with soap and water. If you don’t have soap and water, use an alcohol-based hand sanitizer.
• Don’t touch or shake hands with people who are sick. Keep your baby away from those who are sick.
• Clean and disinfect frequently touched surfaces.
• Cover your mouth and nose with a tissue when you cough or sneeze. If you don’t have a tissue, cough or sneeze into your upper sleeve or elbow, not your hands.
• Stay home when you’re sick, and keep your children home when they’re sick.
