Year: 2013

Field Note:

For 2011-2015, indicator data come from the National Survey of Children with Special Health Care Needs (CSHCN), conducted by the U.S. Health Resources and Services Administration and the U.S. Centers for Disease Control and Prevention in 2009-2010. Compared to the 2001 CSHCN survey, there were wording changes, skip pattern revisions, and additions to the questions used to generate this indicator for the 2005-06 CSHCN survey. There were also issues around the reliability of the 2001 data because of the sample size. The data for the 2 surveys are not comparable for NPM6, and findings from the 2005-06 survey may be considered baseline data. However, the same questions were used to generate the NPM6 indicator for the 2009-2010 survey. Therefore, the 2005-2006 and 2009-2010 surveys can be compared.

All estimates from the National Survey of CSHCN are subject to sampling variability, as well as survey design flaws, respondent classification and reporting errors, and data processing mistakes.

2011 Florida PRAMS Report. PRAMS question: How often does your new baby sleep in the same bed with you or anyone else? Note: data prior to 2011 came from national CDC report which counts always and often as yes to bed sharing; and seldom rarely and never as not bed sharing. Florida PRAMS only counts never answers as not bed sharing which is why the percentage appeared to drop substantially between 2010 and 2011. Data for 2012 and 2013 is not available yet. We used the same information for 2012 and 2013 that we found in 2011. For the PRAMS data the numerator and the denominator are weighted to be representative of the state.

STATE: FL FY: 2015

Your State's 5-year Needs Assessment should identify the need for preventive and primary care services for pregnant women, mothers, and infants; preventive and primary care services for children and services for Children with Special Health Care Needs. MCHB will capture annually every State's top 7 to 10 priority needs in an information system for comparison, tracking, and reporting purposes; you must list at least 7 and no more than 10. Note that the numbers listed below are for computer tracking only and are not meant to indicate priority order. If your State wishes to report more than 10 priority needs, list additional priority needs in a note at the form level.

Phase 6 PRAMS Survey in Florida starting in 2009.

SIGNIFICANCE

Placing an infant on their back to sleep greatly reduces the risk of SIDS in both healthy full-term and preterm infants.

SP() #

PERFORMANCE MEASURE:

The percentage of teen births, ages 15-17, that are subsequent (repeat) births.

STATUS:

Active

GOAL

To lower the percentage of subsequent births to teens age 15 to 17.

DEFINITION

Measures the percentage of teen births, ages 15-17, that are subsequent (repeat) births.

Numerator:

Number of females age 15-17 under with a second or higher order birth. For multiple births only the first of the multiple births are used in this measure.

Denominator:

Number of live births to females ages 15-17 in the calendar year.

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2020 OBJECTIVE

Related to FP-8

FP-8.1 Reduce the pregnancy rate among adolescent females aged 15 to 17 years. Target: 36.2 pregnancies per 1,000.

Related to FP-11

FP-11.1 Increase the proportion of sexually active females aged 15 to 19 years who use a condom and hormonal or intrauterine contraception at first intercourse. Target: 14.8 percent.

DATA SOURCES AND DATA ISSUES

Birth certificates are the source of data on mother's age, births, and teen with a second or higher order birth.

SIGNIFICANCE

A second teen birth is associated with the lack of high school completion, inability to work, solidifying the cycle of poverty for young mothers, creating welfare dependency, and increased risk of infant mortality.

SP() #

PERFORMANCE MEASURE:

The percentage of low-income children who access dental care

STATUS:

Active

GOAL

To increase access to dental services for low-income children in order to provide clinical preventive and treatment services needed to improve and maintain oral health.

DEFINITION

The percentage of low-income children who access dental care.

Numerator:

Number of children who receive services through Medicaid providers, county health departments and community health centers.

Denominator:

The number of low-income children below 200% of the federal poverty level.

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2020 OBJECTIVE

OH-8

Increase the proportion of low-income children and adolescents who received any preventive dental service during the past year. Baseline: 26.7 percent of children and adolescents aged 2 to 18 years at or below 200 percent of the Federal poverty level received a preventive dental service during the past year in 2007. Target: 29.4 percent.

DATA SOURCES AND DATA ISSUES

Data are compiled from annual ad hoc reports provided by the Medicaid program, from county health department data maintained by the Public Health Dental Program, and community health center data extracted from the annual Uniform Data System report.

SIGNIFICANCE

Low-income children are at high risk for dental disease because of the lack of access to professional care. Dental caries is the most common chronic disease of children, but amenable to early intervention. Early dental disease can be reversed and more advanced disease can be treated before it progresses to pain, infection and the need for more expensive intervention.

SQ() #

OUTCOME MEASURE:

Pregnancy-related death ratio per 100,000 live births.

STATUS:

Active

GOAL

To reduce the number of pregnancy-related deaths.

DEFINITION

Measures the number of pregnancy-related deaths in Florida.

Numerator:

Number of pregnancy-related deaths as determined by review of the Florida Pregnancy Associated Mortality Review Committee.

Denominator:

Number of live births.

Units: 100000 **Text:** Rate

HEALTHY PEOPLE 2020 OBJECTIVE

MCH-5 Reduce the rate of maternal mortality

Target: 11.4 maternal deaths per 100,000 live births. Baseline: 12.7 maternal deaths per 100,000 live births occurred in 2007.

DATA SOURCES AND DATA ISSUES

Pregnancy Associated Mortality Review (PAMR) data base and vital records collected by the state.

SIGNIFICANCE

Pregnancy-related mortality is a reflection of the health status and treatment of the mother prior to and during pregnancy.

Check this box if you cannot report the numerator because
 1. There are fewer than 5 events over the last year, and
 2. The average number of events over the last 3 years is fewer than 5 and therefore a 3-year moving average cannot be applied.
