**State Profile for FY 2010**  
**State: FL**

1. State MCH Administration

The Department of Health is the agency responsible for the administration of the Title V program in Florida. Maternal and child health responsibilities are divided between Family Health Services (pregnant women and children) and Children's Medical Services (children with special health care needs). The Department of Health administers health programs through its county health departments and Children's Medical Services offices. Healthy Start continues to be our priority maternal and child health initiative in Florida. Healthy Start is designed to ensure access to maternal and child health services to all women and children in Florida. Other efforts to improving maternal and child health include services to substance exposed newborns, Fetal and Infant Mortality Review projects, improving pregnancy outcomes, prenatal smoking cessation, and pregnancy associated mortality review. Services for children with special health care needs include the Early Intervention Program, high risk obstetrical satellite clinics, Regional Perinatal Intensive Care Centers and clinic-based medical and therapeutic care.

## FORM 10 (continued)

### 11. Statewide Initiatives and Partnerships

#### a. Direct Medical Care and Enabling Services:

Children's Medical Services Integrated Service Delivery Network - A comprehensive continuum of medical and supporting services to eligible individuals with special health care needs. The system of care is a statewide integrated network of providers that includes local, regional and tertiary care facilities. Providers and families are supported through a case management system that includes nurse case managers, social workers and health care professionals. The service continuum includes prevention, early intervention, primary care and medical and therapeutic care.

Child Health Services for Children under 1 - Child Health Services are provided mainly by the County Health Departments and include immunizations, periodic health history and physical examinations, laboratory screening tests for health indicators such as lead and anemia, developmental screening, risk assessment, parent education, accident prevention and substance abuse prevention education. Child Health is funded 100% by Title V.

#### b. Population-Based Services:

Pregnancy Associated Mortality Review (PAMR) project - a population-based surveillance and selective case review process that monitors trends in pregnancy associated deaths, and identifies gaps in care and systematic service delivery problems.

Fetal and Infant Mortality Review (FIMR) Project - a community-based effort to provide quality improvement mechanisms that identify medical, psychosocial, environmental and structural factors that may contribute to fetal and infant deaths.

Healthy Start Prenatal Screening - used to identify pregnant women who have an increased risk of pregnancy complications or poor birth outcomes due to environmental, medical, nutritional, or behavioral risk factors. Every pregnant woman is eligible for the screening process. Women at-risk may be eligible for care coordination and other services, based on need and local resources.

Healthy Start Infant Screening - used to identify infants who are at increased risk of poor health or adverse development due to environmental, medical, nutritional, or behavioral risk factors. Every infant born in Florida is eligible for the screening process.

#### c. Infrastructure Building Services:

Healthy Start Coalitions - There are 30 Healthy Start Coalitions covering 64 of the 67 counties in Florida to ensure local leadership and planning for a system of care, to promote optimum health outcomes for pregnant women and infants. Additional capacity is provided through partnerships with the private sector, the public sector, state government, local government, community alliances, and maternal and child health care providers.

Healthy Start Evaluation - The Healthy Start program includes an evaluation component of all Healthy Start services. This includes tracking the number of participants who receive Healthy Start services and comparing these numbers to indicators of improved pregnancy outcomes or infant developmental outcomes such as infant mortality, entry into prenatal care, and the number of sudden infant deaths.

Note: The Department of Health does not track breastfeeding data in the general population. The department has previously reported survey data from Ross Laboratories. Prior to 2005, the Department reported Ross data for the percentage of mothers in Florida who were breastfeeding in the hospital. In 2005, the Department began reporting Ross data for the percentage of mothers who were breastfeeding their infants at six months of age. However, Ross Laboratories has now ceased to conduct their Infant Feeding survey so data is no longer from this source. The Department now uses data provided by the CDC based on the National Immunization Survey. The CDC data is based on children born in 2004 and interviewed through November 2009. The last data currently available on the CDC website is for 2007.

Note: Since Florida’s birth certificate does not ask about smoking during the third trimester, PRAMS data is used to determine performance on this indicator. Data for 2008 were available thru PRAMS “Ponder.” Florida PRAMS’ answer rate was less than 70% in 2008. 2010 is not available yet. We used the same information for 2010 that we used in 2009 .. For the PRAMS data, the numerator and the denominator are weighted to be representative of the state. Objectives for 2004-2010 differ from the objectives in SPM #3, women who report tobacco use during pregnancy, as data come from different sources.

**NATIONAL PERFORMANCE MEASURE #16**

Note: Starting in 2004 trimester prenatal care began to be calculated as the time elapsed from the date of the last menstrual period to the date of the first prenatal care visit. Prior to 2004 these data were obtained by direct question that noted the trimester the mother began prenatal care. Consequently these data are not comparable to data from prior years. Births with unknown information as to when prenatal care began are excluded from the denominator. Annual performance objectives have been lowered to accommodate the change in data collection. Data for 2009 comes from CHARTS. 2010 is provisional from the Office of Statistics and Assessment.

**FORM 14**  
**List of Priority Needs**  
**FL FY2012**

1. Prevent unintended and unwanted pregnancies.
2. Promote preconception health screening and education.
3. Promote safe and healthy infant sleep behaviors and environments.
4. Prevent teen pregnancy.
5. Improve dental care access, both preventative and treatment, for children.
6. Increase access to medical homes and primary care for all children, including children with special health care needs.
7. Improve health care transition for adolescents and young adults with special health care needs to all aspects of adult life.
8. Increase early intervention services for children with special health care needs.

**FORM 15**  
**Technical Assistance (TA) Request**

**Category of Technical Assistance Requested:**

State performance measure issue 3, the percentage of women having a live birth who received preconception counseling about healthy lifestyle behaviors and prevention strategies from a health care provider prior to pregnancy.

**Description of Technical Assistance Requested**

Request evaluation of the effectiveness of our current counseling and education, and consultation on how preconception efforts might be strengthened and improved.

**Reason(s) Why Assistance Is Needed**

Assistance needed to increase the state's ability to meet its objectives, and increase the number of women who receive adequate preconception care.

**What State, Organization or Individual Would You suggest Provide the TA (if known)**

Not known, possibly consultation with other states that have been successful in increasing preconception counseling and education.

1. Florida does not gather data on race other than White, Black, and Other. Estimates for other racial groups are based on proportion of 2010 deliveries in that racial group, applied to the total in Row1 Column1, and deducted from Other and Unknown. In the event that the numbers in the estimated racial groups total to more than the Other and Unknown column, then they proportionately adjusted to equal the Other and Unknown Column.
2. "All", "White", and "Black" estimates come from 2010 Florida CHARTS population projections: <http://www.floridacharts.com/charts/population.aspx>. Estimates for the total number in the other racial groups come from the 2007/09 American Community Survey: [http://factfinder.census.gov/servlet/DTGeoSearchByListServlet?ds\\_name=ACS\\_2009\\_3\\_YR\\_G00\\_&\\_lang=en&\\_ts=283165423983](http://factfinder.census.gov/servlet/DTGeoSearchByListServlet?ds_name=ACS_2009_3_YR_G00_&_lang=en&_ts=283165423983). This total number is then converted to a percentage of the total "Other and unknown" using the 2007-09
3. American Community Survey.
4. The American Community Survey only provides estimates for age 0-4, and so the proportions within this age range are applied here using the same proportion as "Total all races."

1. "All", "White", and "Black" estimates come from 2010 Florida CHARTS population projections: <http://www.floridacharts.com/charts/population.aspx>. Estimates for the total number in the other racial groups come from the 2005-2009 American Community Survey: [http://factfinder.census.gov/servlet/CustomTableServlet?\\_ts=195386930898](http://factfinder.census.gov/servlet/CustomTableServlet?_ts=195386930898). This total number is then converted to a percentage of the total Florida 0-19 year old population using the 2005-09 American Community Survey. This proportion is then applied to the "Total All Races" in Column 1, Row 1 of this form, and the resulting number deducted from the "Other and unknown" in Column 9, Row 1 and placed in the proper race column of Row 1. When the total from the American Community Survey generated estimates is greater than the "Other and unknown" in Column 9, Row 1, then a "0" is placed in this cell, and the American Community Survey generated estimates are recalculated in proportion to the "Other and unknown" total.
2. Estimated based on the 2005-09 American Community Survey: [http://factfinder.census.gov/servlet/DTSUBJECTSHOWTABLESERVLET?\\_ts=315388046366](http://factfinder.census.gov/servlet/DTSUBJECTSHOWTABLESERVLET?_ts=315388046366). Percent of children under 18 living in single-parent female household: The number of race or ethnicity category households multiplied by the percentage of female/male only households, where there is no husband/wife, but there is a child <18 years that is her/his own; divided by the total number of children in race or ethnic category.

4. The source for this data includes Hispanic as a race. To estimate counts that would include Hispanic ethnicity in the race categories, The Florida Department of Health, Office of Planning, Evaluation, and Data Analysis provided projections for the 2010 population of 0-19 year olds by race and ethnicity.
5. The source of this data combines "More than one race reported" and "Other and Unknown" into a single category.
6. Cannot be calculated because a denominator is "0".
