

**Florida Department of Health – Indian River County**  
**Measure 1.1.2 - Community Health Assessment**

Measure 1.1 – The Community health assessment is continually updated to broaden and deepen the community's understanding of public health issues and resources.

- Required Documentation 1.1.2 – Provide the health department's most recent community health assessment.

**Document:** Indian River County Collaborative Community Health Needs Assessment

**Description of Evidence:**

(Narrative description of the community health assessment [attached], discussing how it addresses the entire population that the department serves. Highlight relevant sections of the document that address each of the following elements.)

- a) Pages xii-xiv, 2-33 - Data and information from a variety of sources and community sectors, including consideration of the context of the populations
- b) Pages xv, 91, 98-99, 101-103 - Descriptions of health issues and specific population groups with greater or particular health issues and inequities
- c) Pages xii, 24, 56-57, 63, 101-103 - Description of factors that contribute to specific population's health issues, including social determinants of health and community factors or contributors; considering how contributing factors overlap in populations
- d) Pages xiv, xviii-xix, 16, 27, 85, 90 - Description of community resources or assets that may be employed to improve the community's health

# Indian River County Collaborative Community Health Needs Assessment 2015

Revised 12/30/2019

# **Indian River County Collaborative Community Health Needs Assessment 2015**

## Acknowledgments

The 2015 Indian River Collaborative Community Health Needs Assessment is a result of the collaborative effort, participation and contribution of a broad spectrum of health and human service organizations that came together around the commitment to improve and enhance services for the betterment of the entire community. Indian River County Hospital District, Indian River Medical Center, Florida Department of Health – Indian River, Treasure Coast Community Health, Visiting Nurse Association and Whole Family Health Center, along with the Health Council of Southeast Florida, wishes to extend our appreciation and thanks to all the organizations that participated and contributed to this comprehensive body of work, as well as for their commitment and collective efforts to improve access to health care on behalf of the residents of Indian River County. Their insight was essential to identifying health care priorities, populations and topics of the assessment. We would like to especially acknowledge the participation and contribution of the following entities that served on the Advisory Council and/or played a valuable role in gleaning community insight and perspective throughout the community health needs assessment:

- 211 Palm Beach/Treasure Coast
- Audubon Society (Pelican Island)
- Boys and Girls Clubs of Indian River County
- City of Fellsmere
- City of Sebastian
- City of Vero Beach
- City of Vero Beach Recreation Department
- Consumer - Registered Dietitian
- Early Learning Coalition of Indian River County
- Economic Opportunities Council of Indian River County, Inc.
- Environmental Learning Center
- Fellsmere Community Center
- Fellsmere Community Prayer and Worship Center
- Fellsmere Enrichment Center
- Florida Department of Health - Indian River County
- Gifford Youth Achievement Center
- Homeless Family Center
- Indian River County Board of County Commissioners
- Indian River County Community Development Department
- Indian River County Fire Rescue
- Indian River County Healthy Start Coalition, Inc.
- Indian River County Hospital District
- Indian River County Medical Society
- Indian River County Ministerial Association
- Indian River County National Association for the Advancement of Colored People (NAACP)
- Indian River County Sheriff's Office
- Indian River Impact 100
- Indian River Medical Center
- Indian River Neighborhood Association
- John's Island Foundation
- Rotary Club of Vero Beach Oceanside
- School District of Indian River County
- Sebastian Police Department
- Sebastian River Area Chamber of Commerce
- Senior Resource Association
- St. Mark's Anglican Church
- Substance Awareness Center of Indian River County
- The Mental Health Collaborative of Indian River County
- The Source
- Treasure Coast Community Health
- Treasure Coast Food Bank
- Treasure Coast Homeless Services Council, Inc.
- United Way of Indian River County
- Visiting Nurse Association of the Treasure Coast
- Whole Family Health Center
- Youth Guidance

The Community Health Needs Assessment was conducted in context of the vision, mission and values set forth by the collaborative partnering organizations. This publication would not have been possible without the assistance, guidance and support of these collaborative partners and their commitment to improving the quality of life of residents in the community.

## Executive Summary

A community health needs assessment is a community-driven process of identifying unmet health care and human service needs of a population and identifying possible interventions to meet those needs. Undertaken with the collective input of a wide range of community partners, the overall aim of this collaborative community health assessment was to identify key areas where action can be taken to enhance health of Indian River County's communities. In July 2015, Indian River County Hospital District, Indian River Medical Center, Florida Department of Health – Indian River, Treasure Coast Community Health, Visiting Nurse Association and Whole Family Health Center engaged the Health Council of Southeast Florida to facilitate a collaborative, comprehensive health needs assessment in adherence with the Internal Revenue Service (IRS) and Patient Protection and Affordable Care Act requirements and guidelines, as well as the Public Health Accreditation Board (PHAB) health care regulatory requirements for local health departments.

This collaborative community health needs assessment provided the opportunity to:

- Assess the population's health status
- Highlight areas of unmet need
- Present the community's perspectives
- Provide suggestions for possible interventions
- Highlight recommendations that policymakers might consider when setting new policy goals and objectives for health improvement activities

The report includes secondary data from national, state and local databases and when appropriate and possible, comparative information is presented. It also includes primary data that encompasses the community's perspective. Data was collected, analyzed and compiled for this assessment to enable and guide healthcare providers, managers, local health department and hospital officials, health and program planners, and community leaders to identify health indicators within Indian River County that present areas of concern, gaps in care or services and opportunities for improvement. The information provided in this assessment may be used to identify opportunities to change and improve future health planning initiatives.

The assessment is organized into four sections:

1. Demographic and Socioeconomic Profile
2. Health Status Profile
3. Health Resource Access and Availability Profile
4. Community Perspective

## Demographic and Socioeconomic Profile

Demographic and socioeconomic factors are not only important determinants of health, but are key in allowing policy makers and planners to better serve the needs of a community. This section provides information on key demographic, social and economic indicators, such as population, presented by various cohorts, e.g. age bands, gender, race, and income, estimates of poverty, educational attainment, employment, housing, transportation and crime.

- The 2013 population in Indian River County was 141,994, 0.73% of Florida's population, and has been steadily increasing since 2009.
- Nearly a third (29.4%) of the residents in the county are 65 years or older, which is more than the percentage of Florida, which is 18.6%.
- Over a fifth (20.6%) of individuals in Indian River County are under 19 years of age.
- In 2013, 85.4% of the population identified as White and 9.6% identified as Black or African American.
- Additionally, 11.7% of the residents in Indian River County identified as Hispanic.
- In 2013, 13.4% of Indian River County residents lived below the poverty level, which is under \$24,250 for a family of four.
- In 2013, 32.4% of residents who identified as Black or African American lived below the poverty line, higher than any other racial or ethnic group by at least 10%, which represents a racial disparity.
- Geographically, Fellsmere (32948) and Vero Beach (32960 and 32967) had over 20% of residents living below the federal poverty line.
- In Indian River County, 10.1% of the labor force was unemployed, higher than the state at 9.7%; however, percent unemployment has been decreasing steadily since 2010.
- In the 2013-2014 school year, the high school graduation rate in Indian River County was 79.1%, higher than that of Florida (76.1%); however, the rate has been decreasing since the 2011-2012 school year.
- Life expectancy in Indian River County was 77.2 for Males and 82.7 for Females, compared to 76.9 and 82 for FL.
- These demographics are shown to be linked to poor health outcomes on pages 101-103 (Appendix A, B) through data captured by the Protocol for Assessing Community Excellence in Environmental Health (PACE EH) and others.

## Health Status Profile

This section profiles the health status of the community and includes data compiled from health equity sources and the PACE EH project done in Gifford in 2018-2019 on maternal and child health such as prenatal care access, birth rates, fetal/infant mortality, child immunization rates; behavioral health including: alcohol consumption, suicide and self-inflicted injuries; morbidity and mortality trends as reflected by data on chronic diseases, infectious diseases, and leading causes of death.

- In 2014, there were 1,282 live births in Indian River County, a rate of 9.0 per 1,000, lower than that of the state.
- In Indian River County, 931 births or over 70% were to those mothers who received adequate or higher prenatal care according to the Kotelchuck Index.
- In 2014, the rates of births to mothers who are overweight and obese were 26.3 and 27.9 per 1,000, respectively, both higher than the rates of Florida. (24.1 and 21.5 per 1,000 in Florida, respectively)
- In 2014, the fetal death rate in Indian River County was 7.7 per 1,000 live births, slightly higher than Florida's (7.1 per 1,000 live births, and increasing since 2011). The fetal death rate in Indian River County in 2014 was higher than the Healthy People 2020 Objective of 5.6 per 1,000 live births. The fetal death among those identifying as White is 9.1 per 1,000 live births, while there is a lower rate among those identifying as Black and Other at 7.4 per 1,000, which is lower than that of the state
- In 2014, the infant death rate was 4.7 per 1,000 live births for the county, significantly lower than in previous years and in comparison to the state at 6.0 per 1,000 live births. The 'Black and Other' infant mortality 3-year rate from 2012-2014 is over twice as high at 25.0 per 1,000 live births when compared to the 'White' infant mortality (2.6 per 1,000). The fetal death rate was 7.7 per 1,000, slightly higher than Florida's (7.1 per 1,000), and increasing since 2011.

- In 2014, 29.5% of WIC children over the age of 2 were overweight or obese, higher when compared to Florida's (26.7%), and the second highest among surrounding counties. [Brevard, Okeechobee, Osceola, St. Lucie]
- In 2014, 7.9% of middle school students reported having used alcohol within the past 30 days (compared to Florida's 10.1%). In 2014, 3.3% of middle school students reported binge drinking, lower than the state's rate (4.7%), and significantly lower than in 2010 (9.2%).
- In 2014, 31.8% of high school students reported having used alcohol within the past 30 days (compared to Florida's 28.4%). In 2014, 14.9% of high school students reported binge drinking, higher than the state's rate (13.7%), but a decrease from 2010 (20.6%).
- Among adolescents, the rate of non-fatal hospitalizations due to self-inflicted injuries from 2010 to 2012 is higher in Indian River County than in the state. [332.7/100,000 for 12-18 and 317.3/100,000 for 19-21 compared to 64.8 and 86.3, respectively.
- There has been an increasing trend in inpatient discharges from 2012-2014 related to episodic mood disorders with some of the highest numbers of inpatient discharges being in the 10-14 and 15-19 age groups.
- In 2014 there were 26 deaths by suicide by county residents, an age-adjusted rate of 14.9 per 100,000 residents, which was slightly higher than the state's and higher than the Healthy People 2020 target of 10.2 per 100,000. The greatest rates are among the 45-64 age groups, which have been increasing since 2009. [3 year rolling 2012-2014 rate of 31.8 per 100,000]
- The rate of hospitalizations from coronary heart disease was higher in Indian River County (353.5 per 100,000) than the state (338.0 per 100,000).
- The rate of hospitalizations from diabetes has been increasing since 2009 from 1433.4 per 100,000 to 1735.3 per 100,000 in 2012.
- The rate of cancer incidence has decreased from 464.7 per 100,000 in 2009 to 426.0 per 100,000 in 2011, though it is still the leading cause of death in Indian River County.
- The rate of obesity among adults in Indian River County is 26.1%, lower than the state's rate of 26.4% in 2013. Additionally, over 3 out of 5 adults reported being either overweight or obese in Indian River County (60.2%).
- From 2008 to 2012, the rate of students at or above the 95<sup>th</sup> percentile in BMI in the county increased from 8.3% to 11.2% for middle school students and from 11.4% to 14.2% for high school students.
- In 2014, there were 2,033 deaths in Indian River County, a rate of 694.6 per 100,000. Over 83% of deaths were those attributed to individuals over the age of 65. The most frequent cause of deaths was cancer accounting for 25.1% of deaths, followed by heart disease, responsible for 22.3% of deaths.
- In 2014, the age-adjusted death rate for cancer in the county was 175.8 per 100,000, significantly higher than the state, which is 155.5 per 100,000.
- In 2014, the age-adjusted death rate for major cardiovascular disease in the county was 178.0 per 100,000, the highest rate from 2010-2014. The county's rate was lower than the state's rate of 202.9 per 100,000. However, there is an upward trend in the county, especially among residents identifying as Black or Other (228.5 per 100,000 in 2014).
- There were 107 deaths due to unintentional injury in Indian River County, an age-adjusted death rate of 54.8 per 100,000, significantly higher than that of the state (41.1 per 100,000).
- The death rate due to falls in Indian River County was higher at 16.2 per 100,000 than that of Florida (9.7 per 100,000) and has been increasing since 2011. The highest rate of deaths due to falls can be seen in the 80+ age group, which had a rate of 204.4 deaths per 100,000 residents for 2012- 2014.

## Health Resources Availability and Access Profile

This section examines the availability of health care resources and health care access in the community and includes information on health insurance coverage, Federally Qualified Health Centers (FQHCs), licensed facilities overview, and medically underserved populations and areas (MUPs/MUAs), as well as the health care safety net of the community.

- There are 6 nursing homes in Indian River County with a total of 665 licensed nursing home beds.
- There are 3 licensed hospitals in the county, two in Vero Beach and one in Sebastian, with a total of 566 licensed beds.
- In Indian River County, there are 21 assisted living facilities with a total of 965 beds, 19 home health agencies and 2 adult day care centers.
- There are two health department sites in the county, one in Vero Beach and one in Gifford.
- There are 4 FQHCs (2 in Vero Beach and 2 in Fellsmere) and one administrative site in Indian River County, all part of Treasure Coast Community Health, Inc.
- Indian River County has one Medically Underserved Population – Low Income.
- In 2014, there were 23,652 uninsured individuals in the county, accounting for 16.5% of the population, which was slightly lower than the state (16.6%) and a significant decrease from 2013 (19.9%). In 2013, 14.6% of those residents identifying as Black or African American were uninsured, while in 2014, 31.1% of residents identifying as Black or African American were uninsured, which was more than twice as high as any other racial group, which marks a racial disparity in uninsured across the county.

## Community Perspective

Gathering community perspective is an essential part of the Collaborative Community Health Needs Assessment by providing insight on health issues in the community and validating quantitative data collected in the demographic and socioeconomic, health status and health resource availability and access profiles. This section reflects the perspective, thoughts, opinions and concerns of key stakeholders and residents in the community, regarding the health issues in the community, the role of hospitals, clinics, the health department and health service providers in the community. The Health Council of Southeast Florida conducted twelve community focus groups and fifteen in-depth key informant interviews with community stakeholders to collect information from a cross-section of the community. From the key informant interviews and the focus groups, key health issues and barriers to care were identified, as well as opportunities to note and community strengths/assets, which are listed below.

- **Key Health Issues:**
  - Dental/Oral health
  - Diabetes
  - Mental health
  - Substance abuse
  - Obesity
  - Poor Nutrition/Diet
  - Hypertension
  - Aging Population
  - Accessibility and affordability of health care coverage
  - Availability, accessibility and affordability of health care services
- **Barriers to Care:**
  - Limited number of providers
  - High cost of health care coverage and health services, including medications
  - Long wait-times and waiting periods for services
  - Transportation
  - Lack of awareness of and access to resources in the community to maintain a healthy lifestyle
  - Lack of knowledge and health education, especially prevention
  - Disparities based on social and economic factors
- **Opportunities to Note:**
  - Provide accessible and affordable health care and health care coverage
  - Provide health education
  - Increasing the awareness of access to resources in the community
  - Provide additional funding and resources
  - Increase the number and frequency of bus routes
  - Develop walk-in clinics with extended hours
  - Use collaborative and strategic thinking to fill gaps
  - Partner with the local community-based organizations and agencies
- **Community Strengths/Assets:**
  - Hospitals, health department, community clinics
  - Parks, walking trails, playgrounds, beaches
  - Transportation
  - Resources for the elderly population
  - Food pantries/soup kitchens
  - Local churches
  - Social Service Programs
  - Community-based organizations
  - Strong sense of community

## Conclusion

The Advisory Council evaluated the quantitative and qualitative data presented in the Collaborative Community Health Needs Assessment to synthesize a list of priorities through a strategic planning process. The Collaborative Community Health Needs Assessment will be used to create new plans for addressing the unmet needs of the community and strengthen programs already addressing key health issues in the community through the development and implementation of Community Health Implementation Plans.

## Approach

### Methodology

In July 2015, leaders from Indian River County Hospital District, Indian River Medical Center, Florida Department of Health – Indian River, Treasure Coast Community Health, Visiting Nurse Association and Whole Family Health Center convened to discuss the feasibility of conducting a collaborative community health needs assessment. The vision of the various partners is to improve the health of the residents of Indian River by identifying and addressing some of the gaps, issues, challenges, and barriers that affect access to quality health care and to improve access to programs, services, and resources that support a healthy lifestyle. A comprehensive community health needs assessment plays an integral role in achieving this.

At the request of these entities, the Health Council of Southeast Florida, (HCSEF) facilitated this community health needs assessment process. The Health Council of Southeast Florida (HCSEF) is defined in Florida State Statute (408.033) as the local health planning council serving this region of the state, the organization is well-positioned to facilitate the process that will ultimately lead to a comprehensive Collaborative Community Health Needs Assessment (CCHNA).

The CCHNA will provide an opportunity to create community health partnerships that are essential for community health improvement. The assessment satisfies not only the Public Health Accreditation Board (PHAB) health care regulatory requirements for the Local Health Department in Indian River County, but also the newly added Section 4959 of the Internal Revenue Code for nonprofit hospitals. A hospital which fails to satisfy the community health needs assessment requirement is subject to an excise tax for each tax year in which the requirement is not met. Furthermore, the Affordable Care Act (ACA) establishes specific requirements that hospitals conduct and implement a community health needs assessment at least every three years. As a component of a Federally Qualified Health Center's renewal process, there is a Need for Assistance Worksheet required, which includes assessing Core Barriers, Core Health Indicators, and Other Health and Access Indicators. By partnering with each other, the six entities in Indian River County are able to solve community health problems by leveraging public and private resources, while avoiding duplication of services.

The assessment includes quantitative and qualitative data that serve to guide strategic planning initiatives. Quantitative and qualitative methods were used to gather primary and secondary data. Data presented in the Demographic and Socioeconomic Profile, Health Status Profile, and Health Resource Availability and Access Profile are comprised of secondary data. Data presented in the Community Perspective section are comprised of primary data.

Data sources consulted for this report include, but are not limited to: The U.S. Census Bureau, the Florida Agency for Health Care Administration (AHCA), the Florida Department of Health (FDOH), the Florida Behavioral Risk Factor Surveillance System (BRFSS) Data Report, the Florida Department of Children and Families (FDCF), the Centers for Disease Control and Prevention (CDC), U.S. Department of Labor Statistics, Florida Department of Education Information and Accountability Services (EIAS) and Florida Department of Law Enforcement (FDLE). Information on the community's perspective was obtained through primary data collection methodology, including community focus groups and key informant interviews.

Data was collected, analyzed and compiled for the assessment to guide healthcare providers, managers, health and program planners, administration and staff of the six entities conducting the assessment, and community leaders to identify health indicators within the community that present areas of concern, gaps in care or services and opportunities for improvement. The information provided in this assessment may be used to identify opportunities to change and improve future health planning activities.

## Partner Engagement

### *Indian River County Hospital District*

Indian River County Hospital District is a special tax district located in Indian River County, Florida, whose board of trustees is authorized and empowered to establish, construct, purchase, operate, maintain and lease, as lessee or lessor, such health facilities in which the district provides a cadre of health and medical services for the residents of Indian River. The health facilities through which the Indian River Hospital District provides health and medical services are for the use of the public and for the preservation of the public health.

### *Florida Department of Health – Indian River*

The Florida Department of Health – Indian River (hereafter, the Health Department) is part of a statewide system of coordinated county health departments formed under Chapter 154 of the Florida Statutes. The Health Department has two main locations offering services to the community. The main site provides: primary care services for adults, women's health, family planning, dental, WIC, chronic disease prevention programs, sexually transmitted diseases (STDs), epidemiology and immunizations. The Gifford Health Center Pediatrics Clinic provides primary care services to children from birth through age 17. The Health Department also serves an integral role in Indian River's emergency response system during emergencies and disasters, such as hurricanes and disease outbreak.

### *Indian River Medical Center*

Indian River Medical Center (IRMC) located in Vero Beach, Florida is a fully-accredited, not-for-profit, community hospital. The hospital has a long and rich history. In 1932, Garnett Lundsford Radin, a 29-year old nurse first started the hospital when she converted an old hotel into a 21-bed facility. In 1952, a new 35-bed facility was opened and by 1967, it had expanded to 164 beds. The current facility opened in 1978 with 215 beds. Currently licensed for 339 beds, IRMC provides a full array of quality healthcare to Indian River, St. Lucie, Martin, Okeechobee, Orange, Osceola, Polk, Brevard, and Seminole counties in Florida. They boast a state-of-the-art Emergency Department, a Heart Center which is affiliated with Duke Medicine, and a prestigious cardiac surgery program.

### *Treasure Coast Community Health*

Designated by the Health Resources and Services Administration, under Section 330 of the Public Health Service Act, Treasure Coast Community Health (TCCH) is a nonprofit Federally Qualified Community Health Center (FQHC) focused on the medical, dental, and mental health needs of uninsured and under-insured residents of Indian River County. Founded in 1995, they offer a range of quality, comprehensive health care services, essentially promoting access to a continuum of coordinated care and vital support services that are more likely to lead to positive health outcomes and healthier lifestyles.

### ***Visiting Nurse Association***

The VNA was chartered in 1975 as a nonprofit home health agency with the distinct mission of fulfilling the need to provide homecare for local residents of Indian River County. In its inception, the VNA of the Treasure Coast employed one nurse director and one home health aide. Together, they traveled to patients' homes and provided clinic and personal care services. Fast forward to the present day, and the VNA now employs close to 400 clinical and administrative staff to help the community members with their needs.

### ***Whole Family Health Center***

The Whole Family Health Center was established in 2013 and is a 501(c)3 non-profit corporation dedicated to the delivery of healthcare to all including individuals with limited resources and access to care, with two medical practices in Fort Pierce and Vero Beach. A group of 42 staff and contracted employees carry out the responsibility of providing exceptional medical care to all patients and consumers in a caring and enthusiastic manner. Whole Family Health Center's partnership with community leaders, neighborhood centers, hospitals, physicians, and the patients they serve, enable the development of new ideas and resources to ensure total care of people living in our communities.

## Demographic and Socioeconomic Profile

Indian River County is located in the Treasure Coast region of eastern Florida. Established in 1925, it is named for the Indian River Lagoon, which runs through the eastern part of the county. Indian River County's total area is 616.92 square miles, of which 81.57% (503.23 square miles) is land and 18.43% (113.69 square miles) is water. It is bordered by Brevard County on the north, St. Lucie County on the south, Okeechobee County on the southwest and Osceola County on the west and the Atlantic Ocean on the east.

The demographic and socioeconomic characteristics of the residents of Indian River County are highlighted in this section. These characteristics provide context for the health care needs of the community and are indicators and predictors for health care utilization patterns and health outcomes. Furthermore, the demographic and socioeconomic profile of a community provides information important in the identification of barriers to accessing health care services. The intervention strategies used in this assessment will draw from poor health outcomes and their links to the demographics in Indian River County. Health disparities are further shown on pages 101-103 (Appendices A & B).

Data in this needs assessment are presented for Indian River County and in some cases, the state of Florida, for comparison purposes. Additionally, data may be presented at the ZIP Code level if necessary.

## Population

### Total Population

As reflected in Table 1, the U.S. Census Bureau reported that the 2013 population of Indian River County was 141,994. The residents of the county account for 0.73% of Florida's total population of 19,552,860.

*Table 1: Total Population, Indian River County and Florida, 2013*

Indian River		Florida
Population	% of Florida's Population	Population
141,994	0.73%	19,552,860

Source: U.S. Census American Community Survey (ACS), 2013  
Compiled by: Health Council of Southeast Florida, 2015

### Population by Gender

Table 2 shows the gender distribution in Indian River and Florida. In 2013, the Indian River population was 48.3% males and 51.7% females.

*Table 2: Population by Gender, Indian River County and Florida, 2013*

	Indian River		Florida	
	Number	Percent	Number	Percent
Male population	68,621	48.3%	9,565,609	48.9%
Female population	73,373	51.7%	9,987,251	51.1%
Total Population	141,994	100.0%	19,552,860	100.0%

## Population by Age

Health care needs vary greatly between age groups. Understanding the age composition of an area aids in identifying needs and planning for health services. Table 3 shows the population by age group in Indian River County and Florida. The median age in the county is 50.6 years, slightly higher than the median age in Florida (41.5 years). The highest proportion of the population in Indian River County falls in the 65 to 69 year range, with 8.5% of its residents in this category. Over a third of the population in the county is 62 years or older which is higher than Florida (22.2%). Additionally, 14.5% of the county's population is 75 years or older compared to 8.5% in Florida. Figure 2 shows the population distribution graphically.

*Table 3: Population by Age, Indian River and Florida, 2013*

	Indian River County	Florida
Total Population	141,994	19,552,860
Under 5 years	4.4%	5.5%
5 to 9 years	5.6%	5.6%
10 to 14 years	4.4%	5.9%
15 to 19 years	6.2%	6.1%
20 to 24 years	4.7%	6.7%
25 to 29 years	4.1%	6.3%
30 to 34 years	3.9%	6.1%
35 to 39 years	4.3%	5.8%
40 to 44 years	5.0%	6.5%
45 to 49 years	6.2%	6.8%
50 to 54 years	7.4%	7.2%
55 to 59 years	7.2%	6.8%
60 to 64 years	7.1%	6.1%
65 to 69 years	8.5%	5.7%
70 to 74 years	6.4%	4.4%
75 to 79 years	5.0%	3.4%
80 to 84 years	5.6%	2.5%
85 years and over	3.9%	2.5%
16 years and over	84.4%	81.8%
18 years and over	81.9%	79.4%
60 years and over	36.5%	24.7%
62 years and over	33.7%	22.2%
65 years and over	29.4%	18.6%
75 years and over	14.5%	8.5%
<b>SUMMARY INDICATORS</b>		
Median age (years)	50.6	41.5
Sex ratio (males per 100 females)	93.5	95.8
Age dependency ratio	90.5	64.6
Old-age dependency ratio	55.9	30.7
Child dependency ratio	34.5	33.9

## Population Growth/Change

The table below reflects the population change, by age bracket, in Indian River County between 2012 and 2013. Overall, there was a 1.0% increase in total population. Though the total population increased 1.0% from 2012 to 2013, there are subgroups of the population which increased and decreased at disproportionate rates and this can have implications for health care planning. The 15-19 year old age group represented the largest percent change with a 17.7% increase in the time period shown. The second largest percentage change occurred in the 5 to 9 years (12.9%), followed by the 60 to 64 years (10.0%) age groups. The 10 to 14 years age group experienced the largest percentage decrease of 16.0%. Figures 3 and 4 graphically depict the percent population by age group and the population change in Indian River County from 2008 to 2013.

*Table 4: Population by Age, Indian River County, 2012 & 2013*

	Population		Percent Change from 2012 to 2013
	2012	2013	
Total population	140,567	141,994	1.0%
AGE			
Under 5 years	7,015	6,237	-11.1%
5 to 9 years	7,069	7,980	12.9%
10 to 14 years	7,452	6,259	-16.0%
15 to 19 years	7,485	8,811	17.7%
20 to 24 years	6,881	6,687	-2.8%
25 to 34 years	12,432	11,466	-7.8%
35 to 44 years	13,096	13,195	0.8%
45 to 54 years	18,751	19,334	3.1%
55 to 59 years	11,066	10,266	-7.2%
60 to 64 years	9,143	10,054	10.0%
65 to 74 years	20,141	21,156	5.0%
75 to 84 years	13,855	14,980	8.1%
85 years and over	6,181	5,569	-9.9%
Median age (years)	50.1	50.6	1.0%

## Population Projections / Population Growth

Table 5 shows the U.S. Census Bureau's projected population growth in Indian River County by age through 2040 beginning with census data from 2010. Though the total population is projected to increase 11.4% from 2013 to 2020, there are subgroups of the population which will increase and decrease at disproportionate rates. The population age 85 and over is projected to increase 13.7% between 2013 and 2020. The age groups 65-69 and 70-74 are both projected to increase upwards of 30% between 2013 and 2020 while the 20-24 age group is projected to increase by 3.2%. Assessment of population projections and age distributions can help anticipate further health care needs and demand and can help inform planning activities.

*Table 5: Population Projections by Age, Indian River, 2010-2040*

Age	Census		Projections					
	2010	2013	2015	2020	2025	2030	2035	2040
Total	138,028	139,586	143,755	155,582	166,614	176,829	185,780	193,699

## Population by Race and Ethnicity

The diversity within an area is another important consideration for health planning, as health behavior, health care utilization, and subsequently health outcomes often differ between races and ethnicities. Table 6 shows the population of Indian River County and the state of Florida by race and ethnicity. The percentage of individuals identifying as White is 85.4%, higher than the state's rate (76.2%). The percentage of individuals who identify as Black or African American is 9.6%, lower than the state's rate (16.1%). In Indian River County, 11.7% of the population in the county identify as Hispanic or Latino, lower than Florida (23.6%). Figures 5 and 6 show the population distribution by race and ethnicity graphically.

## Language Spoken at Home

Language is often a barrier to healthcare access, particularly for individuals with limited English proficiency. Table 8 shows languages spoken in Indian River County and in Florida. In Indian River County, 12.1% of the population reported speaking a language other than English at home in 2013. In Indian River County, 8.8% of the population reports speaking Spanish or Spanish Creole at home and only 2.2% reported speaking 'Other Indo-European languages'.

*Table 8: Language Spoken at Home, Indian River County and Florida, 2013*

## Housing

The table below shows the total number of households and households by type in Indian River County and in Florida in 2013. A household includes all individuals who occupy a housing unit. A housing unit is a house, an apartment, a mobile home, a group of rooms or a single room that is occupied as living quarters. In Indian River County in 2013 there were 76,710 housing units, of which 57,435 were occupied and 25.1% of the housing units were vacant. Of the 74.9% percent of occupied housing units, 41,217 were owner occupied.

*Table 9: Households, Indian River County and Florida, 2013*

## Population by Census County Division

A Census County Division (CCD) is a subdivision of a county that is a relatively permanent statistical area established cooperatively by the Census Bureau and state and local government authorities. There are two CCDs in Indian River County: Fellsmere CCD and Vero Beach CCD. The table below shows population for each of these divisions. The data shown in the table below is a 5-year estimate (2009-2013) and due to the granularity of the data shown and the data collection methods, 1-year estimates are not available.

*Table 10: Population by Census County Division, Indian River County, 2009-2013 (5-year estimates)*

Indian River Census County Division	Population	Percent
Total Population	139,356	100.0%
Fellsmere CCD	19,589	14.1%
Vero Beach CCD	119,767	85.9%

## Population by Municipality

The term "municipal governments" refers to political subdivisions within which a municipal corporation has been established to provide general local government for a specific population concentration in a defined area, and includes all active government units officially designated as cities, boroughs towns and villages.

This concept corresponds generally to the "incorporated places" that are recognized in Census Bureau reporting of population and housing statistics, subject to an important qualification – the count of municipal governments in this report excludes places that are currently governmentally inactive.

The incorporated areas (areas consisting of greater than or equal to 1,000 people) in Indian River County consist of: Fellsmere, Indian River Shores, Orchid, Sebastian and Vero Beach. The table below shows the census population counts in Indian River County and Cities. Sebastian experienced the greatest percentage change with 3.16% higher than the county as a whole between 2010 and 2014. All other areas experienced growth as well, with the exception of Orchid in which there was a percentage change of -0.96%.

*Table 11: Census Population Counts Indian River and Cities, April 1, 2010 and 2014*

County and City	1-Apr-14	1-Apr-10	Total Change	Percent Change
	(Estimate)	(Census)		
Indian River Total Population	140,955	138,028	2,927	2.12%

Socioeconomic status can influence access to care and health outcomes. The socioeconomic variables and indicators reported in this community health assessment include measures on: poverty, income levels, education, employment/unemployment status, public assistance benefits housing, transportation, uncompensated care, and crime.

## Poverty

Poverty creates many difficulties for individuals, families and the communities in which they live. Poverty often hinders access to a variety of services and products including proper medical care and nutrition. There are different terms commonly used to reflect certain levels of poverty. The U.S. Census Bureau employs 'poverty thresholds' which are statistical calculations used to ascertain the number of poor persons. The Department of Health and Human Services uses 'poverty guidelines' to determine eligibility for certain programs.<sup>1</sup>

Table 12 shows the Department of Health and Human Services 2015 poverty guidelines.

*Table 12: 2015 Poverty Guidelines*

## Individuals in Poverty/ Children in Poverty

This area measures the percent of children in poverty, as defined by the federal poverty threshold. Table 13 shows the estimated counts and percentages of people in poverty in Indian River County and Florida in 2013. The counts and percentages of people in poverty are shown for the entire population and for the groups under age 18 and ages 18 years and over. The percentage of individuals in poverty in Indian River was 13.4%, slightly lower than the state (17.0%). In Indian River County, 21.3% of individuals under 18 are in poverty, a rate slightly lower than the state's average (24.5%).

*Table 13: Poverty Status in the Past 12 Months by Age and Gender, Indian River County and Florida, 2013*

## **ALICE & Poverty**

**ALICE**, an acronym for **A**sset **L**imited, **I**ncome **C**onstrained, **E**mployed, are households that earn more than the U.S. poverty level, but less than the basic cost of living for the county. Combined, the number of poverty and ALICE households equals the total population struggling to afford basic needs.<sup>2</sup> The table below shows the total households, the percentage of ALICE population and poverty in towns in Indian River County in 2012.

*Table 15: ALICE Population, Indian River County, 2012*

Town	Total HH	% Alice & Poverty
Fellsmere	7,120	44.0%
Florida Ridge CDP	4,047	58.0%
Gifford CDP	9,365	41.0%
Sebastian	708	27.0%
Vero Beach CCD	6,877	44.0%
Winter Beach CDP	51,451	39.0%

Adapted from: United Way ALICE Report, 2014

Notes: Municipal-level data; municipal often relies on 3- and 5- year average, is not available for the smallest towns that don't report income and may overlap with Census Designated Places (CCD)

## Income

### *Per Capita Income*

Income and financial resources often influence health as they facilitate access to resource and services including: health insurance, medical care, healthy food, safe housing, and other basic goods.

Per capita income is calculated by adding all income in an area and dividing by the total population. While per capita income provides some indication of the financial situation in an area, it does not provide insight into the distribution of that wealth or the disparities within an area.

Table 16 shows the per capita income in Indian River County and Florida. In 2013, Indian River County's per capita income was \$28,355, nearly 9.3% more than Florida's per capita income of \$25,834.

*Table 16: Per Capita Income and Earnings, Indian River County and Florida, 2013*

	Indian River	Florida
Per capita income (dollars)	\$28,355	\$25,834
Median earnings for workers (dollars)	\$23,576	\$26,873
Median earnings for male full-time, year-round workers (dollars)	\$39,474	\$40,809
Median earnings for female full-time, year-round workers (dollars)	\$32,282	\$34,419

## Median Household Income

Household income reflects the totaled amount of income of all workers within a household. A household is all people who occupy a housing unit; the occupants may or may not be related.

Table 17 shows counts and the percentage of households by income bracket in Indian River County and Florida. Over 57% of households in the county had income less than \$50,000, a percentage lower than Florida (53.5%). The percentage of households in the income ranges from \$100,000 to \$150,000, was smaller in Indian River than in the comparison areas shown.

*Table 17: Household Income, Indian River County and Florida, 2013*

	Indian River		Florida	
	Number	Percent	Number	Percent
Total households	57,435	57,435	7,211,584	7,211,584

## Cost of Living Index

Cost of Living Index is used to measure prices of items which influence cost of living is specific areas. The table below compares the Cost of Living Index in Vero Beach-Indian River to the national average. In 2014, Indian River ranked higher than the national average in grocery, utilities and items categorized as miscellaneous, but fell below the nation in housing, transportation and health.

*Table 19: Cost of Living Index Values, Indian River Area and National, 2014*

Category (Percent Weight)	FL Vero Beach-Indian River	National Average
Composite (100%)	100.3	100
Grocery (13.56%)	107.1	100
Housing (27.02%)	88.3	100
Utilities (10.30%)	119.0	100
Transportation (12.35%)	97.8	100
Health (4.60%)	96.9	100
Miscellaneous (32.17%)	102.9	100

## Income Inequality

Table 20 shows the Gini Coefficient of Income Inequality for Florida counties. The Gini Coefficient represents the inequitable distribution of income in a community by household. Typically, a Gini Coefficient is between 0 and 1. A value of 1 would indicate that all income in the county is concentrated in one household. A value of 0 would indicate that all income in the county is equally distributed among households. The Gini Coefficient for the state of Florida as a whole was 0.4843. Indian River County had a Gini coefficient of 0.4983 and had the greatest income inequality among surrounding counties.

*Table 20: Gini index, Indian River County, Surrounding Counties and Florida, 2013*

	Gini Index
Florida	0.4843
Indian River County	0.4983
Surrounding Counties:

## Educational Attainment

Educational attainment can also influence socioeconomic status. As previously noted, low socioeconomic status can hinder access to health care services and can result in less desirable health outcomes.

The table below shows the highest degree or level of education attained by the population 25 years and older in Indian River County and in Florida in 2013. In the county, 88.5% of the population had obtained a high school diploma or higher, slightly higher than the state. Moreover, 26.2% of individuals 25 years and over held a bachelor's degree or higher, a bit higher than the state.

*Table 27: Educational Attainment, Indian River County and Florida, 2013*

	Indian River			Florida		
	Total	Male	Female	Total	Male	Female

## School Performance

Table 29 shows accountability reports for local schools in Indian River County from the Florida Department of Education with school grades from schools in Indian River County from 2010 to 2014. Schools indicated as type 01 are elementary schools, 02 are middle schools, 03 are high schools and 04 are combination. School grades for elementary and middle schools are determined by a combination of factors including learning gains and performance measures. Grades from high school include consideration of other measures.

Notes: Legend for School Types: 01=Elementary; 02=Middle; 03=High; 04=Combination, NR indicates none reported

Notes: \*Reported as missing values

Notes: Schools that serve high school grade levels will receive a grade based on a weighting of state-assessment-based components and other components for which data are not currently available. The word "Pending" will appear as their school grade until the other components are available near the end of 2014

Compiled by: Health Council of Southeast Florida, 2015

## Standardized Test Scores

The table below shows the percentage of students in Indian River County, by grade level, who scored 3 or above on the reading and mathematics section of the Florida Comprehensive Test 2.0 (FCAT) in the years 2012 – 2014. Scoring ranges from one (lowest) to five (highest), with three representing a satisfactory performance in the assessed grade and subject.

*Table 30: Percentage of Students Passing (Score of 3 and above), Indian River County and Florida, 2012 - 2014*

Grade	Reading			Mathematics		
	2012	2013	2014	2012	2013	2014
3	63%	58%	56%	56%	49%	49%
4	62%	61%	59%	57%	55%	52%
5	64%	60%	63%	58%	51%	52%
6	58%	58%	58%	52%	49%	45%
7	57%	58%	54%	55%	48%	44%
8	56%	56%	58%	50%	12%	18%
9	59%	57%	57%	NA	NA	NA
10	56%	60%	61%	NA	NA	NA

Source: Florida Department of Education, 2014

Note: NA indicates the FCAT 2.0 was not given that year or is not administered for the selected grade level.

Note: The Spring 2011 FCAT 2.0 Reading and Mathematics and Spring 2012 FCAT 2.0 Science scores were reported as FCAT Equivalent Scores in order to maintain consistent expectations for student performance during the transition year. FCAT Equivalent Scores for these years have been converted to the established FCAT 2.0 scales and are provided in this database so that stakeholders and the general public are able to see what the scores would have been if the established score scales and Achievement Levels had been approved and implemented at that time.

## Business and Employment

### Unemployment

High rates of unemployment can affect the financial stability of individuals within a community, this can lead to decreased expenditures for health care and can result in higher rates of uninsured.

The table below shows employment status of the population 16 years and older in Indian River County and in Florida in 2013. In Indian River County there were 61,256 individuals in the labor force, constituting 51.1% of the county's population. Individuals in the labor force include those who are currently working, as well as those who are not working but are actively looking for a job and available to start work. In Indian River County, 10.1% of the labor force was unemployed, just slightly greater than in Florida as a whole. Figure 7 graphically depicts percent unemployment from 2010 to 2014 in Indian River County.

*Table 31: Employment Status, Indian River County and Florida, 2013*

	Indian River		Florida

## Public Assistance Benefits

### School Lunch Program

Specific schools are identified as Provision 2 schools, where meals are served to all students at no charge, while other students are given eligibility for free and reduced lunch based on the community eligibility provision, which uses information from other programs, such as Supplemental Nutrition Assistance Program (SNAP), to qualify a student for free or reduced price lunch.

The table below shows students in Indian River County and in Florida eligible for free or reduced priced lunch during the 2013-14 school year. During this time period 53.6% of students were eligible for free lunch and an additional 5.5% were eligible for reduced lunch.

*Table 35: Free and Reduced Lunch Status, Indian River County and Florida, SY 2013-14*

	Total Students	# Free	# Reduced Price	# Provision 2	# CEP Direct Certified
Indian River	18,034	9,671	986	0	223
Florida	2,757,069	1,316,037	143,107	33,571	182,765

Source: Florida Department of Education, 2014 (as of 5/5/2015)

Notes: Free = The student is eligible for free lunch; Reduced Priced = The student is eligible for reduced-price lunch; Provision 2 = The student is enrolled in a USDA-approved Provision 2 school; Direct Cert = The student is enrolled in a USDA – approved Community Eligibility Provision (CEP) school and is identified as eligible for free meals based upon the Direct Certification determination or the extension of eligibility to the household due to eligibility of an identified direct certified student.

## Medicaid

Medicaid is a federally and state funded health program in the United States that provides health services to low income individuals and families.

The table below shows the median monthly Medicaid enrollment in Indian River County and in Florida for the years 2004-2014. In 2014, the median monthly enrollment in the county was 21,568, a rate of 15,215.9 per 100,000.

*Table 36: Median Monthly Medicaid Enrollment in Indian River County and Florida, 2004-2014*

Year	Indian River		Florida	
	Count	Rate	Count	Rate
2004	9,696	7,758.4	2,144,415	12,270.3
2005	10,880	8,475.6	2,216,268	12,397.5
2006	11,732	8,837.5	2,186,843	11,990.9
2007	10,985	8,066.5	2,109,988	11,404.8
2008	14,493	10,536.3	2,637,603	14,152.6
2009	14,843	10,785.7	2,678,520	14,314.6
2010	17,296	12,523.4	2,995,439	15,916.0
2011	18,153	13,066.8	3,128,693	16,524.1
2012	19,403	13,871.0	3,352,966	17,607.8
2013	20,920	14,808.3	3,611,417	18,693.7

## Florida KidCare

Florida Kidcare is health insurance offered by the state of Florida for individuals up to 18 years, even if one or both parents are employed. The four parts of Florida KidCare for which one may be eligible are: MediKids, Healthy Kids, Children's Medical Services Network and Medicaid. Title XXI, also known as Children's Health Insurance Program (CHIP), is a state- and federally- funded program (currently, a 31 – 69 match) that provides insurance for children who do not qualify for Medicaid but whose families cannot afford private insurance.<sup>3</sup>

The table below displays CHIP Title XXI enrollment in Indian River County from 2004 to 2014. Overall, the number of enrollments fluctuated during this time period. In 2014, there was a total of 171 KidCare enrollments in Indian River County. It is interesting to note that the KidCare enrollment decreased from 2013.

*Table 37: Children Less than 5 Years Old Covered by KidCare, Indian River County and Florida, 2004-2014*

## Crime

Crime in a community can influence health status both as a result of direct injury from the crimes themselves and as a result of the emotional stress present in areas of high crime.

The table below shows arrests in Indian River County in 2013 and 2014 by type of arrest. The total number of arrests decreased 5.6% from 5,757 in 2013 to 5,434 in 2014.

*Table 39: Arrests, Indian River County, by Agency, 2013 & 2014*

	2013	2014	% Change
Population	139,586	140,955	1.0%
Total Arrests	5,757	5,434	-5.6%

## Health Status Profile

This section provides data on Indian River County's health status for the following health categories: Maternal and Child Health, Behavioral Health, Morbidity and Mortality. The data presented herein can be used to identify health care priorities and to inform policy and program development.

Data in the section may be present as age-adjusted rates or as crude rates. Age adjustment, also called age standardization, is a statistical technique utilized to better allow populations to be compared when the age profiles and distributions within the populations are different.<sup>4</sup> Age-adjusted rates are often used to answer the question, "How does the rate in my county compare to the rate in another even though the distribution of persons by age may vary?"<sup>5</sup> The frequency with which health events occur is almost always related to age. Therefore, in order to examine other risk factors independent of age, age adjustments are often used in public health analyses. The 2010 U.S. Standard population is often used as a guideline to calculate age-adjusted rates.<sup>6</sup> Crude rates, conversely, are the total number of events in a given population over a period of time.<sup>7</sup> Crude rates are useful in examining the burden of disease or death on a community.

### Maternal and Child Health

Improving the well-being of mothers, infants, and children is an important public health goal for the United States. Their well-being determines the health of the next generation and can help predict future public health challenges for families, communities, and the health care system.

#### Prenatal Care Access

Having a healthy pregnancy is one of the best ways to promote a healthy birth and getting early and regular prenatal care improves the chances of a healthy pregnancy. Most practitioners recommend scheduling visit by 8 weeks gestation. Prenatal visits to a health care provider include a physical exam, weight checks, and providing a urine sample. The table below shows the births to mothers who received prenatal care during the first trimester of their pregnancy. Trimester prenatal care is calculated as the time elapsed from the date of the last menstrual period to the date of the first prenatal care visit. In Indian River County, 66.1% mothers received prenatal care during the first trimester, 13.3 percentage points less than Florida.

*Table 40: Births to Mothers with 1st Trimester Prenatal Care, Indian River County and Florida, 2010-2014*

Below are the numbers of births to mothers with first trimester, second trimester, third trimester, no or unknown prenatal care broken down by race and ethnicity and the total number of births across Indian River County for each racial and ethnic group. There were a total of 1,282 births in Indian River County. Of those, 790 or over 61.6% were to those mothers identifying as 'White', while 20.9% identified as 'Black or Other' and the remaining as unknown. We see that 74, or 5.8%, were to mothers with 3<sup>rd</sup> trimester prenatal care, 13, or 1.0%, were to mothers with no prenatal care and 38, or about 3.0%, were to those with unknown prenatal care. It is important to note that 22 births with 3<sup>rd</sup> trimester prenatal care were for those mothers identifying as 'Black or Other', which accounts for 8.2% of all births to 'Black or Other' mothers, which is significantly higher than the 4.7% of births with 3<sup>rd</sup> trimester care to mothers identifying as 'White'.

*Table 42: Births to Mothers by Prenatal Care Initiation by Race and Ethnicity, Indian River County, 2014*

The Kotelchuck Index, also called the Adequacy of Prenatal Care Utilization (APNCU), uses initiation of prenatal care and number of prenatal visits for calculating adequate prenatal care. The table below shows the number of births by the Kotelchuck Index in 2014 for Indian River County by ZIP Code. In Indian River County, 931 births, or over 70%, were to those mothers who received adequate or higher prenatal care.

*Table 43: Births by Kotelchuck Prenatal Care Index by Zip Code, Indian River County, 2014*

The table below shows births by the Kotelchuck index and by mother's education level in Indian River County in 2014. In Indian River County, a total of 1,072 or 83.6% births were to mothers that have a high school diploma or higher, while 16.1% were to those mothers with less than a high school diploma. For those with a high school diploma or higher, there were 181 or 16.8% of births to mothers with inadequate prenatal care, while 30.9% of those with less than a high school diploma had inadequate prenatal care.

## Births

The table and figure below show the counts and rates of birth in Indian River County and Florida from 2004 to 2014. The rates in Florida have been consistently higher than rates in the county, which have fluctuated over the time period shown. In 2014, there were 1,282 live births in Indian River County, a rate of 9.0 per 1,000, lower than that in the state, as seen in the table below. Figure 8 shows the birth rates in the county and the state from 2004 to 2014.

*Table 45: Total Resident Live Births, Indian River County and Florida, 2004-2014*

Year	Indian River		Florida	
	Count	Rate	Count	Rate
2004	1,234	9.9	218,045	12.5
2005	1,360	10.6	226,219	12.7
2006	1,410	10.6	237,166	13.0

## *Births to Overweight & Obese Mothers*

Clear evidence indicates that a woman's pre-pregnancy weight is an independent predictor of many adverse outcomes of pregnancy for the woman and her baby. Women who have a Body Mass Index, or BMI, greater than 25 when they become pregnant have an increased risk of having a C-section, developing gestational diabetes, hypertension, preeclampsia and postpartum weight retention. Women who are underweight when they become pregnant have a higher risk of having a preterm or low-birthweight baby.<sup>8</sup>

The figure below depicts the percentage of births by mother's pre-pregnancy BMI in Indian River County in 2014. Less than 3% of Indian River County mothers had a BMI less than 18.5 pre-pregnancy. However, 28.0% of mothers were considered to be obese and 26.0% were overweight in 2014.

*Figure 9: Percent Births by Mother's Pre-pregnancy BMI, Indian River County, 2014*

<sup>8</sup> Institute of Medicine (IOM) and National Research Council: Implementing Guidelines on Weight Gain & Pregnancy. Retrieved in 2015, from: <http://www.iom.edu/~media/Files/About%20the%20IOM/Pregnancy-Weight/ProvidersBro-Final.pdf>

Table 48 shows the number and percentage of births to overweight mothers at the time pregnancy occurred in Indian River County and in Florida for the years 2010-2014. During the time period shown, the percent of births to overweight mothers at the time pregnancy occurred in the county ranged from 24.9% (the lowest, 2010) to 27.4%. In 2014, the percent of births to overweight mothers at the time pregnancy occurred in the county (26.3%) was higher than that of the state (24.1%).

*Table 48: Births to Overweight Mothers at Time Pregnancy Occurred, Indian River County and Florida, 2010-2014*

## ***Births to Teenage Mothers***

The table below shows the 3-year rolling counts and rates of births to mothers under the age of 15 in Indian River County and Florida from 2004 to 2014. Rate of repeat births is calculated by dividing the number of repeat births to mothers in an age group by the number of births to mothers in that age group. The rates in Indian River County have been comparable to the state's rates since the 2004-2006 time period. The rate for the past 2 three-year periods have been at 0.2 per 1,000. There were no repeat births reported to 10-12 year olds from 2004-2014.

*Table 50: Birth Counts and Rates to Mothers under the Age of 15, Indian River County and Florida, 2004-2014 (3- Year Rolling Rates)*

Year	Indian River		Florida	
	Count	Rate	Count	Rate

The two tables below show the number and percent of repeat births by mother's age in Indian River County and in Florida for the years 2010-2014. It is important to note that rates calculated on a small number of occurrences are affected considerably by even a small change in the number of occurrences.

The table below display the numbers and rates of repeat births to mothers ages 15-17 in Indian River County and Florida from 2010 to 2014. The rate of repeat teen births for the 15 to 17 year old age group is consistently lower in Indian River County than Florida in the time period shown.

*Table 51: Repeat Births to Mothers Ages 15-17, Indian River County and Florida, 2010-2014*

## Birth Weight

Proper prenatal care and healthy behaviors during pregnancy can reduce the likelihood of low birthweight babies. The table below shows the number and percent of babies born at very low birth weight, under 1500 grams (~3.3 pounds) in Indian River County and in Florida from 2010 to 2014. Just over 1% of live births in the county were very low birth weight babies, a percent slightly lower than the state's at 1.6%

*Table 53: Live Births Under 1500 Grams (Very Low Birth Weight), Indian River County and Florida, 2010-2014*

## Infant Mortality

Infant mortality is the death of an infant 0-364 days old. Infant mortality is often used as an indicator to measure the health and well-being of a nation, because factors affecting the health of entire populations can also impact the mortality rate of infants. The table below shows the infant death counts and rates from 2010 to 2014 in Indian River County and Florida. In 2014, the infant death rate was 4.7 per 1,000 live births for the county, significantly lower than in previous years and in comparison to the state.

*Table 55: Infant Death Counts and Rates, Indian River County and Florida, 2010-2014*

Years	Indian River		Florida	
	Count	Rate	Count	Rate
2010	11	8.4	1,400	6.5
2011	16	12.5	1,372	6.4

The table below shows the 3-year rolling infant death counts and rates for Indian River County and Florida by race from 2003-2014. Though the 'White' infant death rate is lower in Indian River County when compared to the state from 2012-2014, the 'Black and Other' infant mortality rate is over twice as high at 25.0 per 1,000 live births.

*Table 56: Infant Death Counts and Rate by Race, Indian River County and Florida, 2003-2014 (3-Year Rolling Rates)*

## Fetal Mortality

Fetal mortality is a loss of a fetus that occurs after 20 weeks gestation. The table below shows the fetal death counts and rates in Indian River County and Florida from 2010 to 2014. In 2014, the fetal death rate was 7.7 per 1,000 live births for the county, slightly higher than Florida's (7.1 per 1,000).

*Table 58: Fetal Death Counts and Rates, Indian River County and Florida, 2010-2014*

Years	Indian River		Florida	
	Count	Rate	Count	Rate
2010	5	3.8	1,551	7.2
2011	4	3.1	1,558	7.3
2012	7	5.6	1,530	7.1
2013	10	8.1	1,533	7.1
2014	10	7.7	1,576	7.1

Source: FloridaCHARTS, Florida Bureau of Vital Statistics 2014  
Compiled by: Health Council of Southeast Florida 2015

The table below shows the fetal death counts and rates in the county and state broken down by race in 3-year time periods. The fetal death rate in the county and state differ from 2012-2014, with Indian River County having a higher rate of fetal death among those identifying as 'White' at 9.1 per 1,000 live births and a lower rate among those identifying as 'Black and Other' at 7.4 per 1,000, which is lower than that of the state. It is also important to note that the 3-year rolling rates of fetal death in Indian River County have been increasing since 2011.

*Table 59: Fetal Death Counts and Rate by Race, Indian River County and Florida, 2003-2014 (3-Year Rolling Rates)*

The table below shows fetal mortality 3-year rolling counts and rates for Indian River County and Florida by ethnicity. When comparing the rates in the county to those at the state level, the 'Hispanic' fetal death rate in Indian River County has been higher than the state's rate in the previous two 3-year periods. Additionally, the 'Non-Hispanic' fetal death 3-year rolling rate in the county has been lower than that of state since 2004.

*Table 60: Fetal Death Counts and Rate by Ethnicity, Indian River County and Florida, 2003-2014 (3-Year Rolling Rates)*

The figure below represents the fetal mortality trend between 2004 and 2014 in Indian River County (green) and Florida (red). We see that Florida's rate (in red) has remained stable, while Indian River's rate (green) had a sharp decrease until 2011, where there was an increase. However, there has been a decrease since 2013.

*Figure 10: Fetal Deaths (Rates) Per 1,000 Deliveries in Indian River and Florida, 2004-2014*

## Neonatal Mortality

Neonatal mortality is part of infant mortality and is defined as a death of a live born infant during the first 28 days of life. The tables below shows the 3-year rolling counts and rates for neonatal mortality by race in Indian River County and Florida from 2003 to 2014. Similar to the infant mortality trend, the 'White' neonatal mortality rate is lower in the county when compared to the state, while the 'Black and Other' neonatal mortality rate is more than twice as high in the county (16.2 per 1,000 live births) than in the state (6.5 per 1,000 live births).

*Table 61: Neonatal Death Counts and Rates by Race, Indian River County and Florida, 2003-2014 (3-Year Rolling Rates)*

## Breastfeeding

Breast milk is best for babies and benefits of breastfeeding include: creating a bond with mother and baby, providing all the vitamins and nutrients the baby needs in the first six months of life, providing antibodies that help fight off viruses and bacteria and lowering baby's risk of having allergies. Breastfed infants are more likely to gain the right amount of weight as they grow rather than become overweight. Research has also found that breast-fed babies have a decreased risk of dying of Sudden Infant Death Syndrome (SIDS), less likely to develop Type 2 diabetes and experience fewer hospitalizations for pneumonia. Mothers can also have benefits, including: having a decreased risk of breast and ovarian cancer, a decrease likelihood of developing Type 2 diabetes and breastfeeding burns extra calories, so it may also help a mother lose weight.

Table 65 reflects the count and percentage of mothers who initiated breastfeeding in Indian River County and Florida for the years 2010-2014. In 2014, 83.2% of mothers initiated breastfeeding in Indian River, slightly lower than the state percentage.

*Table 65: Mothers who Initiate Breastfeeding, Indian River County and Florida, 2010-2014*

### **Women, Infants and Children (WIC) Program**

The Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) provides federal grants to states for supplemental foods, health care referrals, and nutrition education for low-income pregnant, breastfeeding, and non-breastfeeding postpartum women, and to infants and children up to age five who are found to be at nutritional risk. The table below shows the number of individuals eligible for WIC benefits who were served in 2010 through 2014. During the time period shown, the percent of WIC eligible individuals served decreased in both Indian River County and Florida. However, Indian River County consistently had lower rates than the state as a whole with 69.9% of WIC eligible individuals serves in 2014 in the county.

*Table 68: WIC Eligible Individuals Served, Indian River County and Florida, 2010-2014*

Year	Indian River		Florida	
	Count	Rate (%)	Count	Rate (%)

Table 69 shows the number and participation of WIC eligible individuals served in Indian River County by ZIP Code in 2014. There were a total of 1,282 WIC eligible individuals in Indian River County in 2014, with 707 or 55.1% participating in the WIC Program. ZIP Code 32963 – Indian River Shores had 0% participation in WIC, while ZIP Codes 32948 – Fellsmere had the highest percent participation in WIC at 86%.

## Immunizations

Immunization is one of public health's leading health indicators and a primary defense against some of the most deadly and debilitating diseases known. If a community or population has 'herd immunity', the large number of individuals who are immune to a disease, such as those vaccinated, can reduce the probability of an infection spreading to those who are not immune. The table and figure below show the number and percent of kindergarteners who were immunized in Indian River County and Florida in the years 2010-2014. The percentage of kindergarten students in Indian River County who had received all of their immunizations in 2014 was 94.0%, slightly higher than the state's rate.

Figure 11 graphically depicts the kindergarten immunization at the state level for Indian River County and Florida from 2004 to 2014.

*Table 72: Immunization Levels in Kindergarten, Indian River County and Florida, 2010-2014*

## Behavioral Health

Mental health and physical health are closely connected. Mental health plays a major role in people's ability to maintain good physical health. Mental illnesses, such as depression and anxiety, affect people's ability to participate in health-promoting behaviors. This section provide indicators on youth and adult mental health behavior, alcohol consumption, substance abuse and violence/injury measures.

### Mental Health

Table 74 shows the percent of adults who reported 'good mental health' in Indian River County and Florida in 2007, 2010 and 2013. In 2013, 88.4% of adults reported being in 'good mental health', which was slightly higher than in the state of Florida.

*Table 74: Adults with Good Mental Health, Indian River County and Florida, 2007, 2010, 2013*

Year	Indian River	Florida

## Mood Disorders

Despite efficacious and widely available antidepressants and psychotherapeutic interventions, the psychosocial and medical burden of mood disorders continues to be of significant health care concern.<sup>9</sup> Mood disorders are generally episodic, which means they tend to come and go. The effect of Episodic Mood Disorders, such as Manic Disorder, Major Depression, Bipolar Affective Disorder, Manic-depressive Psychosis, etc. can result in hospitalization and fatality.

The table below shows the number of Inpatient Discharges and Emergency Room Visits related to a primary diagnosis of an episodic mood disorder, which include manic disorder, major depression, bipolar affective disorder, manic-depressive psychosis, etc. among Indian River County residents from 2012 to 2014 by age group. There has been an increasing trend in Inpatient Discharges, but a decreasing trend in Emergency Room Visits; however, the number of discharges and visits varies significantly by age group with some of the highest numbers of Inpatient Discharges being in the 10-14 and 15-19 age groups.

*Table 78: Episodic Mood Disorders by Age Group, Emergency Room Visits and Inpatient Discharges, Indian River County, 2012- 2014*

<sup>9</sup> Mood Disorders and Medical Illness: A Major Public Health Problem. Department of Psychiatry, University of Pennsylvania, 2003. Found at: <http://pogoarchives.org/m/ph/gw/gw-attachment-c.pdf>.

A person who suffers from a major depressive episode must either have a depressed mood or a loss of interest or pleasure in daily activities consistently for at least a 2 week period. This mood must represent a change from the person's normal mood; social, occupational, educational or other important functioning must also be negatively impaired by the change in mood.

A major depressive episode is also characterized by the presence of 5 or more of these symptoms: depressed mood most of the day, nearly every day, as indicated by either subjective report (e.g., feeling sad or empty) or observation made by others, markedly diminished interest or pleasure in all, or almost all, activities most of the day, nearly every day, significant weight loss when not dieting or weight gain (e.g., a change of more than 5% of body weight in a month), or decrease or increase in appetite nearly every day, insomnia (inability to sleep) or hypersomnia (sleeping too much) nearly every day, psychomotor agitation or retardation nearly every day, fatigue or loss of energy nearly every day, feelings of worthlessness or excessive or inappropriate guilt nearly every day, diminished ability to think or concentrate, or indecisiveness, nearly every day, and/or recurrent thoughts of death (not just fear of dying), recurrent suicidal ideation without a specific plan, or a suicide attempt or a specific plan for committing suicide.<sup>10</sup>

The tables below show the number of Inpatient Discharges and Emergency Room Visits with a primary diagnosis related to major depressive affective disorder among Indian River County residents in 2014 broken down by calendar year quarter. There were a total of 333 Inpatient Discharges and 10 Emergency Room Visits where the primary diagnosis was a major depressive affective disorder episode in 2014.

## Self-Inflicted Injuries

Self-inflicted injuries include poisoning, hanging, firearms, cutting, submersion, jumping from high place, etc. The tables below show the number of Inpatient Discharges and Emergency Room Visits with external injuries recorded as non-fatal, self-inflicted injuries among residents of Indian River County in 2014 by calendar year quarter. There were a total of 125 Inpatient Discharges and 47 Emergency Room Visits in the county from self-inflicted injuries that did not result in death.

*Table 81: Non-fatal Inpatient Discharges from self-inflicted injuries, Indian River County, 2014*

The table below shows the 3-year rolling numbers and rates of non-fatal hospitalizations from self-inflicted injuries and eating disorders among youth by age group in Indian River County and Florida from 2010 to 2012. The rate of non-fatal hospitalizations due to self-inflicted injuries from 2010 to 2012 is significantly higher in Indian River County (332.7 per 100,000 for 12-18 year olds and 317.3 per 100,000 for 19-21 year olds) than in the state. In addition, the rate of non-fatal hospitalizations due to eating disorders from 2010 to 2012 is significantly higher in Indian River than in the state.

*Table 83: Non-fatal Hospitalization Counts and Rates from self-inflicted injuries and eating disorders, Indian River County, 2010-2012*

Non-fatal hospitalizations for self-inflicted injuries per 100,000 pop. (3-yr rate)				
Age Group	Years	Indian River Count (Average)	Indian River Rate	Florida Rate
12-18	2010-12	35	332.7	64.8
19-21	2010-12	13	317.3	86.3
Non-fatal hospitalizations for eating disorders per 100,000 pop. (3-yr rate)				
Age Group	Years	Indian River Count (Average)	Indian River Rate	Florida Rate
12-18	2010-12	5	49.8	17.6
19-21	2010-12	<2	24.4(u)	11.5

Source: Florida Charts, 2010-2012

Notes: U= Unstable rate (based on fewer than 5 events). When the rates are based on only a few cases or deaths, it is almost impossible to distinguish random fluctuation from true changes in the underlying risk of disease or injury. Therefore comparisons over time or between communities that are based on unstable rates can lead to erroneous conclusions about differences in risk which may or may not be valid.

## Alcohol Consumption and Substance Abuse

Excessive alcohol consumption is the third leading lifestyle-related cause of death for people in the United States each year.<sup>11</sup> Excessive drinking is a risk factor associated with a number of adverse health outcomes including: alcohol poisoning, hypertension, acute myocardial infarction, sexually transmitted infections, unintended pregnancy, fetal alcohol syndrome, sudden infant death syndrome, suicide, interpersonal violence, and motor vehicle crashes.<sup>12</sup>

Excessive drinking, as used by the Behavioral Risk Factor Surveillance System (BRFSS), includes binge drinking and/or heavy drinking and is a frequently used indicator at the population level. Binge drinking is defined as drinking five or more drinks on a single occasion for men and four or more drinks on a single occasion for women. Heavy drinking is defined as drinking more than two drinks per day on average for men and more than one drink per day on average for women.<sup>13</sup>

The table shows adults in Indian River County and in Florida who reported engaging in heavy or binge drinking in 2007, 2010 and 2013. The rate in Indian River County was 14.3% in 2013, which was 3.3 percentage points lower than in the state as a whole.

## Morbidity

Morbidity is another term for illness. The tables and figures in the section below illustrate the numbers of and the rates of hospitalizations for the following diseases: coronary heart disease, cardiovascular disease, stroke, chronic lower respiratory disease (CLRD), diabetes, cancer, obesity, and communicable diseases including enteric disease, tuberculosis, HIV/AIDS and other sexually transmitted diseases.

### Coronary Heart Disease

Heart disease is the leading cause of death for people of most races and ethnicities in the United States. According to the Centers for Disease Control and Prevention (CDC), coronary heart disease (CHD) is the most common type of heart disease.

The table below shows the counts and age-adjusted hospitalization rates from coronary heart disease from 2008 to 2012 in Indian River County and Florida. The rate in the county decreased considerably during the time period shown from 424.6 per 100,000 in 2008 to 353.5 per 100,000 in 2012.

*Table 92: Age-adjusted Hospitalizations From or With Coronary Heart Disease, Indian River County and Florida, 2008-2012*

Year	Indian River		Florida	
	Count	Rate	Count	Rate
2008	1,011	424.6	112,918	449.3
2009	895	387.8	103,981	407.9
2010	868	356.2	98,075	375.6
2011	858	362.0	91,344	345.0
2012	858	353.5	85,179	338.0

## Stroke

Stroke costs the United States an estimated \$34 billion each year.<sup>14</sup> It is the fifth leading cause of death in the United States and is a major cause of adult disability. Every year, more than 795,000 people in the United States have a stroke.<sup>15</sup> The table below shows the counts and age-adjusted hospitalization rates from stroke in Indian River County and Florida from 2008 to 2012. The rate for the county was lower for all the years shown than the state's rate.

## Chronic Lower Respiratory Disease (CLRD)

Chronic lower respiratory diseases are diseases that affect the lungs. The most serious of these diseases is chronic obstructive pulmonary disease (COPD) which includes emphysema and chronic bronchitis. Cigarette smoking is the main cause of COPD.<sup>16</sup>

The table shows the counts and age-adjusted rates of hospitalizations from chronic lower respiratory disease, including asthma, in Indian River County and Florida from 2008 to 2012. The rate for the county was 181.9 per 100,000 in 2012, which was about half of the state's rate.

*Table 97: Age-adjusted Hospitalizations from C.L.R.D. (including asthma), Indian River County and Florida, 2008-2012*

## Diabetes

The American Diabetes Association (ADA) released new research on March 6, 2013, estimating the total costs of diagnosed diabetes have risen to \$245 billion in 2012 from \$174 billion in 2007, when the cost was last examined.<sup>17</sup> Diabetes is a disease that affects how the body uses blood sugar (glucose). Glucose is vital to health because it's an important source of energy for the cells that make up muscles and tissues. It's also the brain's main source of fuel. Too much glucose can lead to serious health problems. Complications of diabetes include cardiovascular disease, nerve, kidney, foot and eye damage, skin conditions and hearing impairment. Chronic diabetes conditions include Type 1 diabetes and Type 2 diabetes.<sup>18</sup>

Table 99 shows the counts and age-adjusted rates of hospitalizations from diabetes, including asthma, in Indian River County and Florida from 2008 to 2012. In 2012, there were over 4,000 hospitalizations of county residents with a primary diagnosis of diabetes, a rate of 1735.3 per 100,000. The county's rate was significantly lower than the state's over the time period shown; however, the rate has been steadily increasing since 2009.

## Enteric Disease Outbreaks

Enteric diseases enter the body through the mouth and intestinal tract and are usually spread through contaminated food and water or by contact with vomit or feces. Every year, millions of cases of foodborne illness and thousands of associated deaths occur in the United States. Enteric diseases are infections that cause gastrointestinal symptoms and may be caused by food or water that is contaminated with a bacteria, virus, or protozoa, including: Campylobacteriosis, Cryptosporidiosis, Cyclosporiasis, Escherichia Coli, Shiga Toxin Producing, Giardiasis, Hepatitis A, Salmonellosis, Shigellosis and Typhoid Fever.

The table below shows the number and rate of enteric disease in Indian River County and Florida from 2010 to 2014. The number of cases ranged from 88-209 in the county during the time period shown. It is important to note that in 2012, there was a Shigellosis and Salmonellosis outbreak in the county that increased the numbers of cases and rate for enteric diseases. In 2014, the rate in the county was 62.1 per 100,000, which is 9.3 percentage points lower than the state's rate.

*Table 106: Enteric Diseases, Indian River County and Florida, 2010-2014*

Year	Indian River		Florida	
	Count	Rate	Count	Rate

## Reportable Diseases

The Florida Health Department requires that practitioners report certain disease and medical conditions. These include: outbreaks, vector borne diseases, some sexually transmitted diseases, food borne diseases, pertussis, Q fever, tuberculosis, lead poisoning, carbon monoxide poisoning and some cancers.<sup>19</sup>

The table below shows the number and rate of select reportable disease cases in Indian River County and in Florida for the years 2010 to 2014. During the time period shown, the number of cases ranged from 159 to 247, and the rate in 2014 was 112.2 per 100,000 which was slightly lower than the state's rate.

*Table 107: Select Reportable Disease Cases, Indian River County and Florida, 2010-2014*

Year	Indian River		Florida

## Obesity

Being overweight and obesity are often associated with poor health outcomes and rapidly increase the risk of mortality. Overweight and obese individuals can develop other diseases such as high blood pressure, high cholesterol, heart disease, stroke, some types of cancer and orthopedic issues.

Being overweight and obese are determined by body mass index (BMI) percentile using sex- and age-specific reference data from the 2000 CDC growth charts. BMI is calculated by dividing weight in pounds by height in inches, squared and multiplying by 703. A BMI of 30 or more is considered obese and 25 or more is considered to be overweight.

The table below shows the percentage of middle school students with a BMI at or above the 95<sup>th</sup> percentile for their weight and gender in Indian River County and in Florida for the years 2008, 2010 and 2012. The percent of middle school students with a BMI at or above the 95<sup>th</sup> percentile was 11.2% in 2012 in Indian River County, comparable to the state; however, there has been a steady increase since 2008.

*Table 112: Percent of Middle School Students with BMI at or above 95th Percentile, Indian River County and Florida, 2008, 2010 and 2012*

## Major Causes of Death

Table 119 shows numbers of deaths, percent of total deaths, crude rate, age-adjusted rate and years of potential life lost for the leading causes of death in Indian River County. In 2014, there were 2,033 deaths in Indian River County. The most frequent cause of death was cancer accounting for 25.1% of deaths, followed by heart disease, responsible for 22.3% of deaths. The greatest age-adjusted death rate was due to cancer (175.8 per 100,000). Cancer deaths had the highest rate of years of potential life lost (YPLL) with 1,833.8 per 100,000 people under 75, indicative of deaths to a population with a younger average age. Years of Potential Life Lost is an estimate of premature mortality and is the number of years of life lost among persons who die before a predetermined age (75 years).<sup>20</sup>

Table 119: Major Causes of Death, Indian River County, 2014

Cause of Death	Deaths	Percent of Total Deaths	Crude Rate Per 100,000	Age-Adjusted Death Rate Per 100,000	YPLL < 75 Per 100,000 Under 75

## Preventable Hospitalizations

Preventable hospitalizations are determined using the Agency for Health Research and Quality (AHRQ) Ambulatory Sensitive Conditions ICD-9 Codes. These conditions include asthma, diabetes or dehydration and are conditions which timely and effective ambulatory care may decrease hospitalizations. Early and preventative care may prevent the onset of the illness or condition or it may help control an acute episode of an illness or managing a chronic disease or condition. High rates of hospitalizations for ambulatory sensitive conditions may be an indicator of insufficient prevention efforts, a shortage in primary care resources or other issues within the health care system that may be barriers to obtaining timely and effective care.<sup>22</sup>

The table below shows the number and rate of preventable hospitalization for individuals in Indian River County and in Florida for the years 2009-2013. Across the time period shown, Indian River County has had significantly lower rates of preventable hospitalizations for those under the age of 65 when compared to the state.

Table 133: Preventable Hospitalizations under 65 from All Conditions, Indian River County and Florida, 2009 - 2013

Year	Indian River		Florida

## Medicaid

Medicaid is a federally and state funded health program in the United States that provides health services to low income individuals and families. The table below shows the median monthly Medicaid enrollment in Indian River County and in Florida for the years 1998-2014. In 2014, the median monthly enrollment in the county was 21,568, a rate of 15,215.9 per 100,000.

*Table 135: Median Monthly Medicaid Enrollment, Indian River County and Florida, 1998-2014*

Year	Indian River		Florida	
	Count	Rate	Count	Rate
1998	7,013	6,540.1	1,479,753	9,665.3
1999	7,624	6,922.0	1,620,062	10,332.3
2000	8,947	7,865.1	1,846,013	11,483.8
2001	9,908	8,562.7	1,964,514	11,989.8
2002	10,665	9,038.7	2,102,401	12,575.6
2003	10,344	8,546.9	2,056,610	12,045.0
2004	9,696	7,758.4	2,144,415	12,270.3
2005	10,880	8,475.6	2,216,268	12,397.5
2006	11,732	8,837.5	2,186,843	11,990.9
2007	10,985	8,066.5	2,109,988	11,404.8
2008	14,493	10,536.3	2,637,603	14,152.6
2009	14,843	10,785.7	2,678,520	14,314.6
2010	17,296	12,523.4	2,995,439	15,916.0
2011	18,153	13,066.8	3,128,693	16,524.1
2012	19,403	13,871.0	3,352,966	17,607.8
2013	20,920	14,808.3	3,611,417	18,693.7

## Health Care Provider Supply

### Physicians

The table below shows the total licensed Florida Physicians in Indian River County from the 2002-2003 state fiscal year to the 2013-2014 state fiscal year. In the 2013-2014 fiscal year, there were 414 licensed physicians in Indian River County, a rate of 293.1 per 100,000, which was slightly higher than the state's rate of 275.7 per 100,000. It is important to note that this data does not detail whether the physician is actively practicing medicine in the county, thus should not be interpreted as an accurate representation of access.

*Table 136: Total Licensed Physicians, Indian River County, Fiscal Years 2002-2014*

Year	Indian River		Florida	
	Count	Rate	Count	Rate
FY 02-03	239	202.6	27,595	165.1
FY 03-04	273	225.6	32,220	188.7

## Dentists

The table below shows the licensed dentists in Indian River County and Florida from the 2002-2003 state fiscal year to the 2013-2014 state fiscal year. In the 2013-14 fiscal year, there were 82 licensed dentists in Indian River County, a rate of 58.0 per 100,000. This rate was higher than the state's rate of 53.8 per 100,000. As with physicians, this number is not necessarily indicative of the number of dentists who are actively practicing in the county and may not be an accurate representation of access to providers.

*Table 137: Total Licensed Dentists, Indian River County, Fiscal Years 2002-2014*

Year	Indian River		Florida	
	Count	Rate	Count	Rate
FY 02-03	55	46.6	6,974	41.7

## Safety Net

Safety net providers are generally non-profit, consumer directed health care centers whose mission is to provide high quality, cost-effective and comprehensive primary and preventive care to medically underserved and uninsured people.<sup>23</sup> These organizations serve low income, working families, the uninsured and other high risk populations, such as homeless, migrant farm workers, isolated rural families, poor women, children and the elderly. Through innovative approaches and interventions in community outreach, patient education and prevention, these safety net agencies also strive to teach their patients to take responsibility for their own health.

Working under the Florida Department of Health, DOH-Indian River is part of a statewide system of coordinated county health departments formed under Chapter 154 Florida Statutes. The Florida Department of Health in Indian River County has two locations offering services to the community. The main site in Vero Beach offers primary care services for adults, women's health, family planning, dental, WIC, chronic disease prevention program, sexually transmitted diseases (STDs), epidemiology, immunizations for adults and international travel, We Care volunteer physician program, environmental health, and vital statistics (birth and death certificates). The site in Gifford offers primary care services for children from birth through the age of 17 and also houses the Indian River County Human Services office.<sup>24</sup>

Federally Qualified Health Centers (FQHC) and Federally Qualified Health Center Look-Alikes (FQHC Look-Alikes) are supported by Health Resources and Service Administration (HRSA) and aim to provide primary health care services to underserved and vulnerable populations. The health centers serve populations with limited access to health care including: low income populations, the uninsured, individuals with language barriers, migrant and seasonal farmworkers, the homeless, and individuals living in public housing<sup>25</sup>. FQHCs and FQHC Look- alike may include community health centers, migrant health centers, Healthcare for the Homeless programs, and public housing primary care programs. These organizations play an instrumental role in filling critical gaps in health care. There are 4 FQHCs and one administrative site in Indian River County, all part of Treasure Coast Community Health, Inc.

*Table 138: Federally Qualified Health Centers and Look-Alike Sites in Indian River County*

## Community Perspective

To glean perspective on the thoughts, opinions and concerns of the community and its residents, the Health Council of Southeast Florida conducted community focus groups and key informant interviews. The Health Council of Southeast Florida conducted twelve community focus groups and fifteen in-depth key informant interviews. The purpose was to collect information from a cross-section of the community, including community stakeholders and members. The approaches were selected in order to obtain the thoughts and opinions of the key health issues, barriers and strengths of the community and opportunities for improvement.

## Community Focus Groups

The Health Council of Southeast Florida conducted focus groups during October 2015 to gain knowledge and insight from community residents living in Indian River County. The discussions aimed to understand the experiences and needs of the community and its residents regarding health issues, health services and the health care system, including the department of health, hospitals, clinics and health and human service providers. This report outlines the focus group methodology and provides a summary of the common themes, quality of life perspective, key health issues, assets of the community, health services needed, barriers to care, opportunities to note and suggestions for improvement.

## Methodology

The Health Council of Southeast Florida developed focus group protocols and questions. A trained focus group facilitator conducted the discussions. Community-based organizations and public agencies serving specific target populations aided in the recruitment of participants. The following segments of the population were recruited: individuals over 65 years of age, individuals residing in the north, south and west regions in Indian River County, parents with children and the homeless.

Participants completed a demographic questionnaire at the start of the focus group. Refreshments were provided at each session and participants were incentivized to participate with \$20 or \$25 gift cards to Publix or Walmart, which were distributed at the conclusion of the session.

Each of the six focus groups had between 9 and 20 participants and lasted approximately 60 to 90 minutes. Sessions were audio-taped and notes were taken for documentation. Participants were assured no names would be attributed to responses given. Only comments made by participants across different focus groups were included below. Thus, not everything said in the groups were included in the results. Tables 139 and 140 show the site, date, time number of participants and target populations for each focus group conducted.

Table 139: Site, Date, Time and Number of Participants in Focus Groups

## **Results**

Twelve focus groups were conducted with an average of 13 participants per session with a total of 156 participants. Focus groups were conducted in two languages: English and Spanish. Twelve questions were asked to focus group participants beginning with questions related to quality of life in Indian River County. In addition, probes were used to clarify responses and gain additional insight and information. Listed below are the common themes that emerged during the focus groups with relation to the community, health services and the health care system.

### Quality of Life

- Most residents feel safe; however, there are areas in which people feel unsafe
- Indian River County was identified by most residents as a “good place to grow old”
  - Retirement community
  - Snow-bird population
  - Lots of resources for the elderly to live and active, healthy lifestyle
- Most residents felt it was a good place to raise children
- Safer and quieter community compared to larger cities
- Segregated community
- Sense of community in Indian River County

### Key Health Issues

- Dental/Oral health
- Diabetes
- Mental health
- Substance abuse
- Hypertension
- Bone/Joint Health
- Obesity
- Cancer
- Accessibility and affordability of health care coverage
- Availability, accessibility and affordability of health care services

### Causes of Health Issues

- Limited access to resources to maintain healthy lifestyle
  - Healthy foods
  - Physical activity opportunities
  - Side Walks
- Lack of knowledge and health education, especially prevention

### Barriers to Care

- Limited number of providers
  - Providers accepting Medicaid or other health insurance in the county
  - Specialists
  - Oral/dental health providers
  - Pediatric health
- High cost of health care coverage and health services

- High cost of services and medications
- Long wait-times and waiting periods for services
- Transportation
- Lack of awareness of resources in the community
  - Health education
  - Hospitals and clinics

#### Community Strengths/Assets

- Hospitals, health department, community clinics
- Transportation
- Parks, walking trails, playgrounds
- VNA mobile clinic
- Food pantries/soup kitchens
- Local churches
- Outreach/Community Centers

#### Health Services Needed

- Affordable health care coverage
- Providers
  - Dentists
  - Specialists
    - Pediatric
    - Adult
  - Mental Health Providers
  - General Physicians
- Better access to affordable healthy foods

#### Opportunities to Note

- Provide accessible and affordable health care and health care coverage
- Increase the number and frequency of bus routes
- Provide health education
  - Nutrition
  - Prevention
  - Navigation of the health care system
- Increase the awareness of resources
  - Provide a resource guide
  - Update the resources
- Extend health service providers hours

## Key Informant Interviews

The Health Council of Southeast Florida conducted 15 informant interviews with key community leaders in October 2015. The purpose was to collect first-hand knowledge from a wide range of people who have expertise about the community, available resources and services. The individuals selected were from agencies that work with current data or other information relevant to the health needs of the community and included leaders, representatives, or members of medically underserved, low-income, and minority populations, and populations with chronic disease needs, as well as members of local government, law enforcement and businesses. Their particular knowledge and understanding provided insight on the existing health issues in the community and the perceived systemic healthcare problems.

## Methodology

The Health Council of Southeast Florida developed key informant interview protocols and questions. Interview appointments were scheduled and each key informant interview was conducted by a trained facilitator via telephone and lasted 30-45 minutes. The facilitator provided an overview of the process at the beginning of the interview and assured that the confidentiality of the informant's comments, the names and any other identifying information would not be reported.

## Results

Fifteen key informant interviews were conducted with community stakeholders. Ten questions were asked to key informants. In addition, probes were used to clarify responses and gain additional insight and information. Listed below are the common themes that emerged during the key informant interviews with relation to the community, health services and the health care system.

### Key Health Issues

- Mental health
  - Children
  - Adults
- Obesity
- Poor nutrition/Diet
- Increasing aging population
- Dental/Oral health
- Substance abuse
- Accessibility and affordability to health care coverage and health services

### Populations with Unmet Needs

- Elderly
- Individuals suffering from mental illness and/or substance abuse
- Homeless
- Low income residents
- Uninsured/Underinsured

### Community Strengths/Assets

- Hospitals
- Clinics & Safety Net Providers
- Department of Health
- Social Service Programs
- Community-based organizations
- Resources for the elderly population
- Parks, trails, sidewalks, beaches, playgrounds
- Strong sense of community

### Challenges and Barriers in Maintaining Health

- Lack of awareness of programs and services
- Lack of health education
- Lack of health care coverage
- Lack of providers accepting (certain types of) health insurance in county
  - Dentists
  - Specialists
- Transportation
- Lack of focus and interest on prevention
- Income disparity
- Limited access to resources to maintain healthy lifestyle
  - Healthy foods
  - Sidewalks
- Lengthy wait times
- Duplication of services

### Opportunities to Note

- Education
  - Prevention
  - Healthy lifestyle
  - Navigation of health system
- Increasing the awareness of resources in community
- Collaboration for the greater good of the community
- Additional funding and resources

### Suggestions

- Collaborative and strategic thinking to fill gaps
- Educate community through outreach efforts
- Develop walk-in clinics with extended hours
- Partner with the local community-based organizations and agencies

## Identification of Priority Strategic Health Issues

On December 1, 2015 the Health Council of Southeast Florida (HCSEF) presented the trigger report, a report summarizing highlights from the quantitative and qualitative findings of the assessment. The presentation was designed to provide a platform for strategic healthcare planning and community health improvement planning in Indian River County.

### Methodology

On December 1, 2015 the Health Council of Southeast Florida (HCSEF) facilitated a discussion among Advisory Council members to identify community strategic issues for Indian River County based on 'Trigger Report', which summarized the quantitative and qualitative data presented during the Collaborative Community Health Needs Assessment. Upon reviewing the results of the quantitative and qualitative data, HCSEF then led a facilitated discussion on the most pressing health issues influencing the health and quality of life of community members in Indian River County. Participants provided their thoughts, expertise, ideas and suggestions on the issues and needs of community members. HCSEF facilitated Advisory Council members through the following process:

1. Flip charts for the identified priorities were placed around the room.
2. The Advisory Committee were provided three (3) sticker dots and asked to place their dots on the top strategic issues that should receive consideration/attention.
3. Advisory committee members were allotted 5 minutes to select the key strategic issues.
4. After the allotted time period, HCSEF tallied the results from the exercise.

After Advisory Council members determined a list of strategic issues, members of the Steering Committee were asked to evaluate and discuss each of the strategic issues during a facilitated, health prioritization session. The results of both group meetings are outlines in the results section below.

## Results

HCSEF compiled and condensed a list of strategic issues and tenets identified by the Advisory Council in the multi-voting exercise. Below are the strategic issues identified by the Advisory Council.

1. Obesity
  - a. Heart Disease
  - b. Cancer
  - c. Infant Mortality
  - d. Diabetes
  - e. Across all populations
    - i. All age groups
  - f. Healthy Foods/Health Living
    - i. Access to
      1. Healthy foods
      2. Potable water
      3. Health living spaces
    - ii. Affordability
  - g. Built Environment
    - i. Potable Water Sources
    - ii. Septic Tanks
  - h. Mental Health
    - i. Self-esteem & Self-Image
    - ii. Bullying & Suicide
2. Mental Health
  - a. Youth
3. Seniors
  - a. Unintentional Injuries
    - i. Falls
4. Environmental Health
  - a. Indian Rive Lagoon
  - b. Built Environment
    - i. Obesity
    - ii. Homes
  - c. Septic Tanks
  - d. Potable Drinking Water
5. Access to Care
  - a. Health Insurance
6. Substance Abuse
  - a. Youth
7. Healthy Literacy

Throughout the discussion, Advisory Council members indicated that there were several tenets that should be integrated into all of the strategic issues:

- Health Equity
- Community Trust
- Poverty
- Health Literacy

On December 8<sup>th</sup>, 2015, members of the Steering Committee held a facilitated prioritization session of the strategic issues identified by the larger Advisory Council to discuss the key health issues and focus areas of the community. The Steering Committee members developed two focus areas, “Long, Healthy Lives” and “Healthy Moms, Healthy Kids,” each of which encompass several specific goal areas. Below are the breakdowns of each focus area:

### “Long, Healthy Lives”

- Emergency Department Diversion (including management of frequent flyers and engaging people in the right level of care)
- Cancer
- Unintentional Injuries (including falls)
- Healthy Weight
- Chronic Disease (including heart disease and diabetes)
- Mental Health (including suicide)

#### “Healthy Moms, Healthy Kids”

- Oral Health
- Mental Health
- Childhood Obesity/Healthy Weight
- Infant Mortality, Prenatal Care

Sharing the outcomes of the prioritization selection with the Advisory Council and facilitation of root cause analyses of each priority area with the Advisory Council and content experts took place in January 2016 to determine strategies to address the health priorities of Indian River County. These priorities or health issues were determined and detailed as follows. The priorities of the Community Health Assessment and Community Health Improvement Plan were Healthy Weight, Environmental Health, Mental Health, and Infant Mortality. These were chosen to align with the State Health Improvement Plan and because of local health issues including:

- Dental/oral health
- Diabetes
- Mental health
- Substance abuse
- Obesity
- Poor nutrition/diet
- Hypertension

These issues were made more complicated as the plan progressed; for example, Hepatitis A outbreaks in the second and third quarters of 2019 have delayed inspections for the health department.

Health disparities were clarified using the Protocol for Assessing Community Excellence in Environmental Health; the systems framework model defined housing problems and built environment problems as the most pressing issues in the community (*see page 103*).

Furthermore, ongoing disparities which have historically been overlooked are beginning to be perceived by both health professionals and the general public. As such the impact of environmental health and health equity are becoming more apparent to the public's overall health and methods of intervention. This is important for the future of the community and public health.

## Conclusion

Communities face the challenge of balancing desire to provide residents access to quality health and human services with decreasing resources and with increasing burden of demand. This collaborative community health needs assessment will help policy and decision makers in Indian River County better understand the characteristics, health status and needs of its communities and aid in planning efforts for services in an effort to improve the health status of the community. The data from the Community Health Perspective should be considered along with the quantitative data from the Demographic and Socioeconomic Profile, Health Status Profile and Health Resource Availability and Access Profile to help the development of specific goals, objectives and an implementation plan. Furthermore, the CHA is annually updated and a description of the data added (at community meetings, forums, focus groups, etc.) was listed in the previous section.

Graphic from the Egalitarianpost.com

Health Equity is when everyone has the opportunity to be as healthy as possible ([CDC](#)). The Indian River County Community Health Improvement Plan ([CHIP](#)) was developed using a Health Equity lens, and is woven through DOH Indian River's Strategic Plan.

This dashboard summarizes key measures that impact Health Equity in our county. In addition to CHIP and SP measures, key [social determinants of health](#) are included. These measure are closely monitored to ensure that we are making progress in efforts to achieve Health Equity for all of our residents.
