ACKNOWLEDGEMENTS

The Health Council of Southeast Florida would like to thank the Florida Department of Health in Palm Beach County and the Health Care District in Palm Beach County for the assistance, guidance and funding support for this Community Health Assessment. We'd like to give a special thank you to the Area Agency on Aging and the Quantum Foundation, Inc. for use of their venues. Furthermore, we would like to extend our sincere appreciation and gratitude to all the community members who participated and contributed to this comprehensive body of work, as well as their compassion and dedication to improve the health and wellbeing of Palm Beach County residents.

Participating Organizations:

EXECUTIVE SUMMARY

The goal of Community Health Assessment is to identify unmet health needs of community residents and to inform and guide future health planning initiatives to meet those needs. In 2016, the Health Council of Southeast Florida (HCSEF) was enlisted by the Health Care District of Palm Beach County and the Florida Department of Health in Palm Beach County to facilitate a comprehensive, county-wide health needs assessment for Palm Beach County.

HCSEF conducted a comprehensive review of secondary data sources to obtain the most reliable and current information for the Community Health Assessment. HCSEF also collected, compiled and analyzed primary data in order to capture the community's perspective.

This report is organized into four main sections:

1. Demographic and Socioeconomic Profile
2. Health Status Profile
3. Health Resource Availability and Access
4. Community Perspective

The demographic and socioeconomic profile includes data on many of the key demographic, social and economic indicators, such as population, income, poverty status, educational attainment, employment, housing and transportation.

The health status of the county provides details on various indicators including: maternal and child health (such as prenatal care, birth rates, infant and fetal mortality, child immunization rates); behavioral health; hospital utilization data; and morbidity and mortality trends of chronic diseases, infectious diseases and leading causes of death.

The health resources availability and access profile section presents information pertaining to the obtainability of health care resources in Palm Beach County and includes information on health insurance coverage, Federally Qualified Health Centers (FQHCs), and medically underserved populations and areas (MUPs/MUAs).

The section titled Community Perspective includes insight gleaned from individuals and organizations in the community.

Below are highlights of each of the four sections.

Demographic and Socioeconomic Profile

- In 2014, there were 1,359,074 individuals residing in Palm Beach County, representing 7.0% of Florida's total population.
- In 2014, over a quarter (25.6%) of Palm Beach County residents were 62 years and over.
- In 2014, 20% of the population in the county identified as Hispanic or Latino.
- In 2014, 29.4% of Palm Beach County residents reported speaking a language other than English at home; 43.9% of those individuals were reported to speak English less than "very well."
- In 2014, 14.6% of individuals residing in Palm Beach County lived below the poverty level.
- During the 2014-2015 academic school year, Palm Beach County School District reported 3,750 students as homeless, an increase of 25.4% from the previous school year.
- During the 2014-2015 academic school year, Palm Beach County had a high school graduation rate of 79.4%, slightly higher than the state's rate of 77.9%
- In 2014, Palm Beach County had an unemployment rate of 10.8%.

Health Status Profile

- In 2015, Palm Beach County had a rate of 76.3 births to mothers with 1st trimester prenatal care, 3.0 lower than Florida as a whole.
- Almost a quarter (22.9%) of all births in 2015 received Inadequate or Intermediate Prenatal Care according to the Kotelchuck Index.
- In 2015, 44.7% of the births were to overweight or obese mothers at the time pregnancy occurred.
- In 2015, Palm Beach County had a birth rate of 10.8, lower than the rate of Florida as a whole.
- The infant death rate and fetal death rate in Palm Beach County shows health inequities and disparities between different races and ethnicities.
- In 2012, in Palm Beach County 38.0% of high school students reported having used alcohol in the past 30 days, 4.1% higher than Florida as a whole.
- In 2015, the age-adjusted suicide death rate in Palm Beach County was 15.7, slightly higher than the rate in Florida (14.6).
- During 2014, in Palm Beach County, the rate of hospitalizations from congestive heart failure was 75.5, higher than the rate in Florida by 13.
- The age-adjusted cancer incidence in Palm Beach County in 2013 was considerable higher in individuals identifying as Black and Other than in individuals identifying as White, 623.2 versus 241.3 respectively.
- In 2013, 40.2% of adults in Palm Beach County reported being overweight.
- In 2015, the age-adjusted death rate was 586.7 in Palm Beach County
- During 2015, Palm Beach County had a higher rate of deaths from unintentional injuries than the state as a whole, with rates of 51.6 and 46.2 respectively.

Health Resources Availability and Access

- In Palm Beach County, there are a total of twelve primary care health professional shortage areas, seven dental care health professional shortage areas and four mental health care health professional shortage areas.
- Palm Beach County has eight populations designated as medically underserved populations.
- 19.2% of individuals residing in Palm Beach County were uninsured in 2014.

Community Perspective

- A Local Public Health System Assessment was conducted in 2016 in Palm Beach County.
- 14 focus groups were conducted in various areas throughout the county. The following sub-groups of the population were recruited: individuals residing in the Glades communities, residents over the age of 65 years, youth, the homeless, individuals with disabilities, and residents that speak a language other than English primarily (Haitian-Creole and Spanish.)
- A total of 21 interviews were conducted with key informants.

METHODOLOGY

In 2016, the Health Care District of Palm Beach County and the Florida Department of Health in Palm Beach County engaged the Health Council of Southeast Florida (HCSEF) to facilitate a comprehensive health assessment for Palm Beach County to identify health indicators within the community that present areas of concern, gaps in care or services and opportunities for improvement. Specifically, the Community Health Assessment includes information and data on the following areas:

- Demographic characteristics
- Socioeconomic characteristics
- Maternal and child health
- Behavioral risk factors
- Death, illness and injury
- Infectious diseases
- Health resource availability

HCSEF conducted a comprehensive review of secondary data sources to obtain the most reliable and current data for the Community Health Assessment. Secondary data sources include but are not limited to the US Census Bureau – American Community Survey, Florida Department of Health, Florida Department of Education, Florida Department of Law Enforcement, Florida Youth Substance Abuse Survey (FYSAS), Behavior Risk Factor Survey and Surveillance (BRFSS), and Agency for Health Care Administration (AHCA). Some sources are rotated and asked in alternate years; therefore, results from those sources may be presented in varying years or multi-year estimates. In addition, geographic data are present in the format in which they are available (i.e., zip code and census county division).

The information within this report may be used to identify health needs in the community and guide future health planning initiatives in Palm Beach County.

In 2017, the information from this Community Health Assessment was presented to the Palm Beach County Health Advisory Council in an effort to identify strategic priority areas and subsequently developed the Community Health Improvement Plan. The following priority areas were identified by the Advisory Council:

- Mental and Behavioral Health
- Active Living and Healthy Lifestyles
- Access to Care and Services

It is important to note that there were several other areas that emerged, and though they are not addressed in the CHIP, they are nonetheless important and, if possible, should be considered during future health planning activities in the community. The Advisory Council stressed the importance of identifying and reaching underserved populations to address health disparities. Engaging the community on their level, in a meaningful way, was also emphasized.

Mental and Behavioral Health

The Health Advisory Council recognized that mental and behavioral health are important parts of a healthy community. Having a strong mental and behavioral public health system promotes individuals to reach their full potential and be fully contributing members of society. According to the Substance Abuse and Mental Health Services Administration (SAMHSA) “Studies show that most people with mental health problems get better, and many recover completely.” With

the right support, access to care and rehabilitation, many people who suffer from mental and behavioral issues will progress to a healthy condition.

According to the Florida Behavioral Health Association, Palm Beach County had 4,855 overdoses between January and October 2016 with over \$41 million in public payer, opioid related, hospital charges. With such a high number of residents suffering with mental health illnesses, including substance use disorders, action is needed. In a determined effort to improve the health of residents of Palm Beach County, the Advisory Council has established Mental and Behavioral Health as a priority.

Active Living and Healthy Lifestyles

Communities, such as Palm Beach County, are heavily burdened with the effect chronic diseases and conditions have on their population. The cost, both measurable and immeasurable, is tremendous. Unhealthy lifestyle behaviors are the underlying cause of many chronic diseases and conditions, which could be lessened or prevented by increasing healthy behaviors. To influence a change, it is appropriate and important for the public health sector to encourage all members of the population to increase healthy behaviors while decreasing high-risk behaviors. Healthy behaviors, such as being active and exercising, as well as eating a healthy diet, are proven to increase life expectancy, decrease chronic conditions, and prevent disease.

The Health Advisory Council identified various conditions and deficiencies in their population that could be improved through the promotion of active living and healthy lifestyles. The Council recognizes the importance of addressing issues affecting a majority of the population, such as a high body mass index. For example, 60.1% of the adult residents of Palm Beach County are overweight or obese. Obesity is a preventable condition that is linked to health conditions such as heart disease, stroke, diabetes, gallbladder disease, osteoarthritis, gout and some cancers. Encouraging the community to adopt more healthy behaviors and a healthy lifestyle can go a long way in preventing many of these diseases and conditions.

Access to Care and Services

Residents of Palm Beach County have wide-ranging and comprehensive health services available. Unfortunately, a large number of residents are unaware of what services are accessible, if they are eligible to use them, and how to take advantage of these much-needed services. Also, Healthy People 2020 identified access to services as an important component to promoting and maintaining health, preventing and managing disease, reducing unnecessary disability and premature death, and achieving health equity. The Health Advisory Council appreciates this difficult situation and determined that improving access to comprehensive, quality care and services is a high priority. In order to reach a large-scale audience, outreach efforts must be wide-spread, varied and customized to the various subpopulations. Materials in multiple formats, settings and languages must be developed. In addition, the ethnic, socioeconomic, cultural, and social make-up of the community must be taken into consideration when addressing gaps and knocking down barriers.

DEMOGRAPHIC AND SOCIOECONOMIC PROFILE

Located in southeast Florida, Palm Beach County is the largest county in the state of Florida in area and the third most populous.¹ Established in 1909, the county was named for the large amounts of palm trees and vast coastal area. The county seat is located in the county's largest city, West Palm Beach.

FIGURE 1: PALM BEACH COUNTY, FLORIDA

Palm Beach County is bordered by Martin County to the north, the Atlantic Ocean to the east, Broward County to the south, Hendry County to the west, and runs into Lake Okeechobee in the northwest. The county's total area is 2,383.143 square miles, of which 1,969.893 square miles is land and 413.305 square miles is water.

The demographic and socioeconomic characteristics of the residents of Palm Beach County are presented in the following section. The selected indicators provide background context for specific health needs in the community and provide information imperative to the identification of barriers and gaps in the health care system.

The data included in this report is specific to Palm Beach County and in many cases, for comparison purposes, data is presented for the state of Florida as well as surrounding counties. Throughout the report, certain sections will include references to the Healthy People 2020 target goals. The targets are included to provide a benchmark and potentially aid in future health planning and goal-setting activities.

DEMOGRAPHIC CHARACTERISTICS

POPULATION

TOTAL POPULATION

According to the Office of Economic and Demographic Research, Palm Beach County is Florida's third most populous county. The health system within Palm Beach County must ensure that all residents have access to the health care services they need, when they need it. As reflected in the table below, the population in Palm Beach County was 1,426,772 in 2017. The residents of Palm Beach County accounted for 7.0% of the population in Florida.

TABLE 1: TOTAL POPULATION, PALM BEACH COUNTY AND FLORIDA, 2017

Palm Beach County		Florida
Population	% of Florida's Population	Population
1,426,772	7.0%	20,278,447

POPULATION BY AGE

Health care needs vary greatly with age. Because of this, identifying the age composition of an area aids in identifying needs and planning for health services. The table below shows the population in age categories as well as the median age in Palm Beach County and in Florida in 2017. The median age in Palm Beach County was 44. years, while in Florida it was 41.8.

TABLE 2: POPULATION BY AGE, PALM BEACH COUNTY AND FLORIDA, 2017

	Palm Beach County		Florida	
	Count	Percent	Count	Percent
Total population	1,426,772	100.0%	20,278,447	100.0%

POPULATION BY RACE AND ETHNICITY

Race and ethnicity are another important consideration for health planning, as health behavior, health care utilization, and subsequently, health outcomes often differ between races and ethnicities. The table and figure below show population by race and ethnicity in Palm Beach County and in Florida in 2017. The percentage of individuals who identify as Black or African American in Palm Beach County was 18.5%, slightly higher compared to Florida as a whole (16.1%).

TABLE 3: POPULATION BY RACE AND ETHNICITY, 2017

	Palm Beach County		Florida	
	Count	Percent	Count	Percent

FIGURE 2: POPULATION BY RACE, PALM BEACH COUNTY, 2017

Population by Gender

The health care needs of an individual can often times vary according to their gender. The health system in Palm Beach County must be equipped to handle the needs of all people, regardless of their gender. The table below shows the percentages of males and females in Palm Beach County and in Florida in 2017. It is important to note that there were slightly more females (51.6%) living in Palm Beach County than males (48.4%).

TABLE 4: POPULATION BY GENDER, PALM BEACH COUNTY AND FLORIDA, 2017

PLACE OF BIRTH

By determining the origins of individuals that make up the population, Palm Beach County can better understand the linguistic and cultural needs of its residents. By incorporating the specific needs of a certain population in the health planning process, Palm Beach County can ensure that individuals not only feel comfortable while receiving health care services but have a better understanding of their health. The table below shows the population by place of birth in Palm Beach County and in Florida in 2014. During that time, almost one-quarter (23.2%) of Palm Beach County residents were foreign born, which was greater than the state of Florida (19.6%) as a whole. Latin America made up the largest percent of those identified as foreign born (16.9%).

TABLE 5: POPULATION BY PLACE OF BIRTH, PALM BEACH COUNTY AND FLORIDA, 2014

Compiled by: Health Council of Southeast Florida, 2016

Further breakdown of the origins of Palm Beach County residents provides greater insight into the linguistic and cultural needs of the population. By addressing such needs, the health system can provide increased access to services among its residents. The table below shows the population by place of birth in the Americas for Palm Beach County and Florida in 2014. Among those who are foreign born, 17.7% were born in the Americas, with 16.9% born in Latin America followed by the Caribbean (8.8%).

LANGUAGES SPOKEN AT HOME

Language is often a barrier to health care access, particularly for individuals with limited English proficiency. The table below depicts the language spoken in the homes of Palm Beach County residents in 2014. Of the population 5 years and older, 29.4% were reported to speak a language other than English; the majority of those individuals spoke Spanish or Spanish Creole at home. Of those, 43.9% were reported to speak English less than "very well."

TABLE 7: LANGUAGE SPOKEN AT HOME, PALM BEACH COUNTY, 2014

	Total	Percent of specified language speakers	
		Speak English "very well"	Speak English less than "very well"
Population 5 years and over	1,288,298	87.1%	12.9%
Speak only English	70.6%	(X)	(X)
Speak a language other than English	29.4%	56.1%	43.9%

HOUSEHOLDS

The availability of adequate and affordable housing for Palm Beach County residents can ensure that the basic need of shelter is attained, and that residents are better suited to address other pressing needs, such as their health. The table below shows count and percent for housing occupancy and housing tenure. Almost 80% (79.2%) of the housing units were occupied in 2014. Among the occupied units, 70.2% were owner-occupied, and 29.8% were renter-occupied.

POPULATION BY CENSUS COUNTY DIVISION

A Census County Division (CCD) is a subdivision of a county that is a relatively permanent statistical area established cooperatively by the Census Bureau and the state and local government authorities. There are 11 CCD's in Palm Beach County. The table below shows the population for each of the divisions. Boynton Beach-Delray Beach CCD is the most populous, while Glades CCD is the least populous in the county. The following figure depicts the area in the county in which each CCD falls.

TABLE 9: POPULATION BY CENSUS COUNTY DIVISION, PALM BEACH COUNTY, 2014

Census County Division	Count	Percent
Total	1,359,074	--
Belle Glade-Pahokee CCD	34,623	2.5%
Boca Raton CCD	130,671	9.6%
Boynton Beach-Delray Beach CCD	316,198	23.3%
Glades CCD	392	0.0%
Jupiter CCD	86,671	6.4%
Lake Worth CCD	215,122	15.8%
Riviera Beach CCD	102,488	7.5%
Royal Palm Beach-West Jupiter CCD	103,098	7.6%
Sunshine Parkway CCD	194,279	14.3%
Western Community CCD	28,178	2.1%
West Palm Beach CCD	147,354	10.8%

All Palm Beach County residents, regardless of whether they have a disability or not, should have equal access to health care services. During the health planning process, it is important to understand how services can be adapted to the needs of the population in order to ensure accessibility for everyone. Shown below is the count and percent of the total population living with a disability in Palm Beach County CCDs in 2014. It is important to note that although the Glades CCD was the least populated, it had the highest percentage of disabled persons relative to its total population.

TABLE 10: POPULATION LIVING WITH A DISABILITY, PALM BEACH COUNTY CCDs, 2014

Geographic Area	Population with Disability	Percent of Total Population
Florida	2,492,469	13.1%
Palm Beach County, Florida	157,493	11.7%
Belle Glade-Pahokee CCD	3,454	11.3%
Boca Raton CCD	14,164	10.9%
Boynton Beach-Delray Beach CCD	45,910	14.6%
Glades CCD	90	23.0%
Jupiter CCD	7,742	9.0%
Lake Worth CCD	23,761	11.2%
Riviera Beach CCD	12,123	11.9%
Royal Palm Beach-West Jupiter CCD	10,748	10.6%

Further breakdown of the population with a disability by age and type in Palm Beach County provides greater insight into the specific needs of residents when accessing and receiving health services. The table below shows that among the civilian, noninstitutionalized population in 2014, the greatest percent of those with a disability were 65 years and older, with 19.7% experiencing an ambulatory-related disability, followed by 13.1% experiencing a hearing-related disability, and 12.7% experiencing an independent-living disability.

TABLE 11: POPULATION WITH A DISABILITY BY AGE AND TYPE, PALM BEACH COUNTY 2014

	Total	Total with a Disability	% with a Disability
Total civilian noninstitutionalized population	1,346,364	157,493	11.7%
Population under 5 years	70,765	389	0.5%
With a hearing difficulty	--	253	0.4%
With a vision difficulty	--	263	0.4%
Population 5 to 17 years	200,285	7,753	3.9%
With a hearing difficulty	--	775	0.4%
With a vision difficulty	--	1,289	0.6%
With a cognitive difficulty	--	5,615	2.8%
With an ambulatory difficulty	--	941	0.5%
With a self-care difficulty	--	1,574	0.8%
Population 18 to 64 years	779,606	56,416	7.2%
With a hearing difficulty	--	9,949	1.3%
With a vision difficulty	--	9,791	1.3%
With a cognitive difficulty	--	22,194	2.8%
With an ambulatory difficulty	--	29,264	3.8%

Table 12 highlights the number and percentage of residents 65 years of age and older that experienced a disability at the county and state level. In 2018, close to 31% of Palm Beach County residents 65 and older exhibited a disability; with ambulatory difficulty representing the highest percentage with 19.4% among this population, followed by hearing difficulty (12.7%), and independent living difficulty (11.9%). A similar pattern is observed at the state level.

TABLE 12: POPULATION 65+ WITH A DISABILITY, PALM BEACH COUNTY AND FLORIDA, 2018

	Palm Beach County			Florida		
	Total	With a disability	Percent with a disability	Total	With a disability	Percent with a disability
Population 65+	332,108	101,899	30.7%	3,996,130	1,323,032	33.1%
With a hearing difficulty	-	42,212	12.7%	-	541,718	13.6%
With a vision difficulty	-	17,052	5.1%	-	245,065	6.1%
With a cognitive difficulty	-	24,030	7.2%	-	338,648	8.5%
With an ambulatory difficulty	-	64,337	19.4%	-	836,737	20.9%
With a self-care difficulty	-	23,228	7.0%	-	293,598	7.3%

SOCIOECONOMIC CHARACTERISTICS

Socioeconomic status can influence access to care and health outcomes. The socioeconomic indicators presented in this report include measures on poverty, income, education, employment/unemployment status, housing and crime.

POVERTY

Poverty is an important factor to include in a comprehensive health assessment as individuals in poverty are at increased risk for mental illness, chronic disease, higher mortality, and lower life expectancy.²

Table 13 illustrates poverty status in Palm Beach County for 2018 according to age and sex in comparison to the state of Florida. In Palm Beach County, 13% of residents lived in poverty, which was slightly lower than the state. Seven percent of the population in the county was 18-64 years and living below poverty level.

Families living in poverty are oftentimes unable to afford necessary health care without the availability of reduced-cost or free services. In order to ensure equitable access to health services, the health system in Palm Beach County must be able to provide services that are affordable for all residents. The table below shows the total and percent of families living below poverty in the last 12 months in 2014. Among the 10.5% of families living in poverty, 17.8% consisted of children under 18 years of age, slightly lower than the state as a whole (19.9%).

INCOME

Income is associated with morbidity and mortality rates.³ Those with a higher income may be able to afford health insurance and health care and can potentially spend more on healthy foods such as fruits and vegetables, which can also play a significant role in health outcomes.

PER CAPITA INCOME

Per capita income is an indicator of what services individual residents are able to afford. When planning health services, the affordability of such services must align with a majority of the population's income to ensure that accessibility is equitable and that residents are receiving the services they need to live healthy, productive lives. The table below shows the per capita income and earnings for Palm Beach County and Florida in 2014. The per capita income in Palm Beach County was \$33,072, over \$6,500 more than the state as a whole. In Palm Beach County, the median earnings for females (\$39,094) was over \$5,000 less than median earnings for men (\$45,193).

TABLE 16: PER CAPITA INCOME AND EARNINGS, PALM BEACH COUNTY AND FLORIDA, 2014

	Palm Beach County	Florida
Per capita income (dollars)	33,072	26,499
Median earnings for workers (dollars)	29,844	27,404
Median earnings for male full-time, year-round workers (dollars)	45,193	41,944
Median earnings for female full-time, year-round workers (dollars)	39,094	35,305

HOUSEHOLD INCOME

Household income is an indicator of the services families are able to afford. The table below shows the household income for Palm Beach County and Florida in 2014. The percentage of households with earnings (70%) was slightly below the state as a whole (72.4%). The percentage of households who received income from social security (39.0%) was almost four percentage points higher than the state as a whole (35.6%). Compared to the state as a whole (19.3%), the percentage of residents receiving retirement income was slightly lower (17.7%). Palm Beach County percentages remain lower than the state as a whole for those receiving supplemental security income, cash public assistance, and food stamps/SNAP benefits in the past 12 months (9.7% among Palm Beach County residents versus 14.3% in the state).

FAMILY INCOME

A family, as defined by the US Census Bureau, is a household in which the householder and all (one or more) other people living in the same household are related to the householder by blood, marriage or adoption. The following table reflects family income in Palm Beach County and in Florida for the year 2014. The county had a higher median and mean family income (\$65,331 and \$96,305 respectively) than the state as a whole.

TABLE 18: FAMILY INCOME AND BENEFITS, PALM BEACH COUNTY AND FLORIDA, 2014

	Palm Beach County		Florida

GINI INDEX

The Gini Index is a measurement of the income distribution throughout residents in a county. The number varies between 0 and 1 and is based on residents' net income. A value of 0 indicates perfect equality, where there is a proportional distribution of income. A value of 1 indicates perfect inequality, where one household possess all the income and other have no income.

Table 18 depicts the Gini Index in Palm Beach County, in surrounding counties and in Florida. In 2014, Palm Beach County has a Gini Index of 0.48 which falls on the lower end of the spectrum when compared with other counties.

TABLE 19: GINI INDEX, PALM BEACH COUNTY AND FLORIDA, 2014

	Gini Index

HOMELESS

It is difficult to create a definition of homelessness that encompasses all the varied situations. One source of a definition are the federal statutes. There are four broad categories of homelessness in the Federal Homeless Emergency Assistance and Rapid Transition to Housing (HEARTH) Act.

- An individual or family who lacks a fixed, regular, and adequate nighttime residence – living in a place not meant for habitation, in a shelter or similar program, or with specific restriction, in an institution.
- An individual or family who will imminently lose housing, under certain circumstances.
- Under certain circumstances, unaccompanied youth, or families with children, who are consistently unstably housed and likely to continue in that state.
- People who are fleeing or attempting to flee domestic or intimate violence and lack the resources to obtain other permanent housing.⁴

This is the definition utilized for annual homeless Point in Time (PIT) counts. PIT counts are annual counts of homeless individuals on a single night during the last 10 days of January. It is important to note that while PIT counts provide valuable information, they are likely undercounts of homelessness due to the difficulty in locating every homeless person in a community. Additionally, results from year to year can be influenced by many factors such as weather, funding and changes in the homeless definition.

This information is important to consider while conducting health assessments and planning future health initiatives. The table below shows the number and percent change of individuals who are homeless. The greatest percent decrease can be seen in 2013, when 1,559 individuals were recorded compared to 2,116 in 2012. Some factors cited as contributing to a decreased number of homeless in 2013:

- Successful programs implemented in the county of the past two years;
- Stricter enforcement of trespass ordinances made the street homeless less visible, and harder to find and count;
- Changes in the method used for the count contributed to a lower count;
- Adjusting count results to ensure those who are literally homeless are reported, resulting in decreases particularly by eliminating school age children and other homeless who are in jail;
- Fewer emergency shelters that serve and target the homeless were identified in 2013 than prior years;
- The lack of service providers in rural communities made it harder to identify the homeless, and where to find them during the count;
- Change in federal count instructions that limited shelter counts to only those facilities identified in the planning area's homeless housing inventory;
- Large emergency shelter provider in area did not report their homeless service data for night of the count;
- The continuum of care had fewer dollars, and volunteers available to carry out their street count;
- 2013 count was not able to get out into the woods, compared to the past street count;
- More permanent supportive housing beds available in 2013 to serve the homeless, whereby those housed are no longer counted as homeless;

⁴ <http://www.dcf.state.fl.us/programs/homelessness/docs/2016AnnualReport.pdf>

- Good, warm and dry weather on the day of the count kept the street homeless out of shelters, making them harder to find.⁵

In 2016, there was a decrease of 6.3% (1332 individuals) from 2015 (1421 individuals). The percent decrease in Palm Beach County in 2016 was slightly below that of the state as a whole (6.3% and 6.7%, respectively).

TABLE 20: HOMELESS COUNT BY CONTINUUM OF CARE, PALM BEACH COUNTY AND FLORIDA, 2011-2016

	Palm Beach County		Florida	
	Count	Percent Change	Count	Percent Change
2011	2,148	--	56,687	--
2012	2,116	-1.5%	55,170	-2.7%
2013	1,559	-26.3%	47,862	-13.3%
2014	1,596	2.4%	41,542	-13.2%
2015	1,421	-11.0%	35,900	-13.6%

⁵ <http://www.dcf.state.fl.us/programs/homelessness/docs/2013AnnualReport.pdf>

In order to identify homeless students, the Florida Statutes and the Florida Department of Education (FDOE) uses an overlapping but broader definition than the one described by the HEARTH Act. Every year, Florida school districts report to the FDOE the number of students identified as homeless during the school year. The definition used during this process defines an individual as homeless if they lack a fixed, regular and adequate nighttime residence, including those who are:

1. Sharing others housing due to loss of housing, economic hardship, or similar reason;
2. Living in motels, hotels, trailer parks, and camping grounds, due to the lack of adequate alternative housing;
3. Living in shelters;
4. Abandoned in hospitals or awaiting placement in foster care;
5. Living in a place not designed for or used as a regular sleeping accommodation for human beings to live;
6. Living in cars, parks, abandoned buildings, or similar setting; and
7. Migratory children living in any of the above described circumstances.⁶

The table below shows the count and percent change of homeless students in Palm Beach County and Florida for the years 2010-2015. The greatest percent change in Palm Beach County occurred during the 2012-2013 school year, when there was an almost 90% increase in the number of students who were considered homeless. In the 2014-2015 school year, there was a 25.40% increase in the number of students considered homeless from the 2013-2014 school year.

TABLE 21: HOMELESS STUDENTS BY DISTRICT, PALM BEACH COUNTY AND FLORIDA, 2010-2015

	Palm Beach County		Florida	
	Count	Percent Change	Count	Percent Change
2010-2011	1,443	--	56,680	--
2011-2012	1,636	13.4%	63,685	12.4%

EDUCATION

Education can increase a person's life expectancy and that quality of life.⁷ This is because those with higher educational attainment have access to higher-paying jobs, which can increase their income level. As mentioned above, income is tied to a higher quality of life.

SCHOOL ENROLLMENT

School enrollment can indicate a population growth among certain age groups among residents. This can inform the health planning process by indicating what types of services will be accessed in the coming years and to what extent. The table below shows the count and percent of school enrollment in Palm Beach County and Florida in 2014. In Palm Beach County, 39.2% of the population three years and over enrolled in school were in elementary school (grades 1-8), followed by college (undergraduate) at 22.9%, and high school (grades 9-12) at 21.4%. These trends follow the state as a whole.

TABLE 22: SCHOOL ENROLLMENT, PALM BEACH COUNTY AND FLORIDA, 2014

	Palm Beach County		Florida	
	Count	Percent	Count	Percent
Population 3 years and over enrolled in school	310,363	310,363	4,665,703	4,665,703
Nursery school, preschool	21,763	7.0%	289,140	6.2%
Kindergarten	15,631	5.0%	226,374	4.9%
Elementary (grades 1-8)	121,790	39.2%	1,808,741	38.8%
High school (grade 9-12)	66,511	21.4%	946,234	20.3%
College, undergraduate	71,059	22.9%	1,171,733	25.1%
Graduate, professional school	13,609	4.4%	223,481	4.8%

EDUCATIONAL ATTAINMENT

Educational attainment has been shown to affect not only income, but also health outcomes. Those with more education tend to have better health outcomes than those with less. The table below shows the educational attainment of males and females in Palm Beach County and Florida in 2014. Among those 25 years and over in Palm Beach County, 26.2% graduated high school (or the equivalent). This is over three percentage points lower than the state as a whole (29.7%). Compared to the state as a whole (17.1%), a higher percentage in Palm Beach County has received a bachelor's degree (20.4%). It should be noted that among those who have some college education but no degree, they may still be enrolled in college in 2014.

TABLE 23: EDUCATIONAL ATTAINMENT, PALM BEACH COUNTY AND FLORIDA, 2014

	Palm Beach County			Florida		
	Total	Male	Female	Total	Male	Female
Population 25 years and over	978,030	462,392	515,638	13,561,596	6,496,259	7,065,337
Less than 9th grade	5.9%	6.6%	5.2%	5.4%	5.7%	5.2%
9th to 12th grade, no diploma	6.5%	7.1%	5.9%	8.1%	8.8%	7.5%

HIGH SCHOOL GRADUATION RATES

A high school degree ensures a greater ability to secure a job and steady income. Shown below are the graduation rates in Palm Beach County and Florida for the years 2010-2011 through 2014-2015. For the 2014-2015 school year, Palm Beach County has a slightly higher rate (79.4) than the state as a whole (77.9).

TABLE 24: GRADUATION RATES, PALM BEACH COUNTY AND FLORIDA, 2010-2011 THROUGH 2014-2015

	2010-2011	2011-2012	2012-2013	2013-2014	2014-2015

SCHOOL PERFORMANCE

Florida grades its schools to show how well students in each school are learning what they need to know to be successful. Assigning a letter grade (A-F) is a way to report a school's effectiveness in a manner everyone can understand. Florida grades schools using a point system based on student achievement and progress.⁸ Health-related factors such as hunger, physical and emotional abuse, and chronic illness can lead to poor school performance. Early sexual initiation, violence, and physical inactivity are consistently linked to poor grades and test scores and lower educational attainment.⁹

The table below shows school grades by year in Palm Beach County for the years 2010-2014. In 2014, 44.7% of Palm Beach County schools rated received an "A", followed by 21.8% of schools receiving a "C", and 19.3% of school receiving a "B".

TABLE 25: SCHOOL GRADES BY YEAR, PALM BEACH COUNTY, 2010-2014

BUSINESS AND EMPLOYMENT

UNEMPLOYMENT

Not only does unemployment mean a loss of income, but it also means an individual may no longer have access to affordable health insurance. Additionally, laid-off workers are more likely than those continuously employed to have fair or poor health and develop stress-related conditions.¹⁰

For many, employment provides the income, benefits, and stability necessary for good health. On the other side, job loss and unemployment is associated with a variety of negative health effects that can prove taxing on a health system serving a large population. The table below shows the employment status of residents in Palm Beach County and Florida in 2014. Among those 16 years and over, 60.2% were in the labor force, with 53.7% being currently employed in 2014. Among the same population, 39.8% were not in the labor force. In Florida, 59.5% were in the labor force with 59.2% currently being employed and 40.5% not in the labor force at all.

TABLE 26: EMPLOYMENT STATUS, PALM BEACH COUNTY AND FLORIDA, 2014

	Palm Beach County		Florida	
	Count	Percent	Count	Percent
Population 16 years and over	1,120,841	1,120,841	15,817,611	15,817,611

Compiled by: Health Council of Southeast Florida, 2016

Changes in unemployment over time can further provide input into health planning process as it can highlight the need for more affordable services. The table below shows the unemployment rate for Palm Beach County and Florida in 2014. In 2014, the rate decreased slightly to 10.8, slightly lower than the state as a whole (10.9).

TABLE 27: UNEMPLOYMENT RATE, PALM BEACH COUNTY AND FLORIDA, 2010-2014

Year	Palm Beach County	Florida

EMPLOYER SIZE AND INDUSTRY

A breakdown of the industries in which most of the population is employed provides an insight into the lifestyle of Palm Beach County residents. In turn, there is a better understanding of the ability to access health services. The table below shows the count and percent of residents in various industries. Over 20% of employed residents were in the “Educational services, and health care and social assistance” industry, followed by the “Professional, scientific, and management, and administrative and waste management services” industry (14.7%) and “Retail trade” (13.2%).

TABLE 28: INDUSTRY, PALM BEACH COUNTY AND FLORIDA, 2014

	Palm Beach County		Florida

PUBLIC ASSISTANCE BENEFITS

Public assistance refers to assistance programs that provide either cash assistance or in-kind benefits to individuals and families from any governmental entity.¹¹ There are two major types of public assistance programs; social welfare programs and social insurance programs. Benefits received from social welfare programs are usually based on a low-income means-tested eligibility criteria.

SCHOOL LUNCH PROGRAM

School food directly affects students' health, learning, and lifetime wellness habits.¹² The table below shows the number of students who received free and reduced lunches in Palm Beach County and Florida in school year (SY) 2015-2016. In Palm Beach County, 106,999 students were eligible to receive free lunch, followed by 6,393 eligible to receive reduced price lunches and 439 eligible to receive provision 2 lunches.

TABLE 31: FREE AND REDUCED LUNCH STATUS, PALM BEACH COUNTY AND FLORIDA, SY 2015-2016

	Total Members	# Free	# Reduced Price	# Provision 2	# Direct Cert
Palm Beach County	190,121	106,999	6,393	439	0
Florida	2,794,975	1,207,289	112,511	57,483	305,360

Source: Florida Department of Education (FDOE), 2016

Notes: Free = The student is eligible for free lunch; Reduced = The student is eligible for reduced price lunch; Provision 2 = The student is enrolled in a USDA-approved Provision 2 school; Direct Cert = The student is enrolled in a USDA-approved Community Eligibility Provision (CEP) school and is identified as eligible for free meals based upon the Direct Certification Determination or the extension of eligibility to the household due to eligibility of an identified direct certified student.

In 1990, the Food Stamp Act was amended to include a provision for an optional nutrition education program to be paired with the distribution of food stamps.¹³ Access to healthy, nutritious foods can lead to better health outcomes among lower-income residents which can in turn, reduce the burden of the health system in Palm Beach County. The table below displays SNAP and free lunch participation in Palm Beach County in September of 2016 by zip code. The greatest number of participants was in the 33411 zip code (West Palm Beach/Golden Lakes/Royal Palm).

The Older Americans Act (OAA), originally enacted in 1965, supports a range of home and community-based services, such as meals-on-wheels and other nutrition programs, in-home services, transportation, legal services, elder abuse prevention and caregivers support.⁹ The table below displays the number of OAA meal clients in Palm Beach County for the years 2013-2018. In 2018, there were 431,767 clients with 3,167 congregate meals clients who were active during the year and 871 home-delivered meals clients active during the year. This is a 12% increase in the numbers of age 60+ meals clients since 2015.

HOUSING

Quality, stable, and affordable housing is foundational for health and economic security. The lack of affordable housing affects families' ability to meet other essential expenses, placing many under tremendous financial strain. High housing-related costs place a particular economic burden on low-income families, forcing trade-offs between food, heating and other basic needs.¹⁴

HOUSING UNITS

Vacant housing units can affect the health and safety of residents. Neighborhoods where the physical environment is dominated by decaying abandoned homes and other housing units affect community well-being, physical health, and mental health. The table below shows housing occupancy in Palm Beach County and Florida in 2014. There was a slightly higher percentage of occupied housing units in Palm Beach County (79.2%) than in Florida (79.7%).

TABLE 34: HOUSING OCCUPANCY, PALM BEACH COUNTY AND FLORIDA, 2014

	Palm Beach County		Florida	
	Count	Percent	Count	Percent
Total housing units	668,464	--	9,051,851	--

Household living status, especially for older residents, can help determine the potential need for home health services or assisted-living spaces. The table below shows the percentage of householders living alone in Palm Beach County and Florida in 2014. In Palm Beach County, 31.4% lived alone in 2014 compared to 29.0% in the state as a whole. Among those 65 years and over, 15.8% were living alone in Palm Beach County compared to 12.1% of this population in the state as a whole.

MEDIAN HOUSING PRICE

Housing value is an indication of the growing or weaning cost of living in an area. With an increased amount of income going towards housing, there can be a decrease in the ability to afford needed health care in the years to come. Shown below is the housing value of owner-occupied units in Palm Beach County and Florida in 2014. The median dollar amount (\$194,600) was greater than the median dollar amount in the state as a whole (\$156,200).

TABLE 36: HOUSING VALUE, OWNER-OCCUPIED UNITS, PALM BEACH COUNTY AND FLORIDA, 2014

	Palm Beach County		Florida	
	Count	Percent	Count	Percent

AVERAGE RENT

Similar to housing value, an increase in gross rent can indicate a growing or weaning cost of living in an area. With an increased amount of income going towards rent, there can be a decrease in the ability to afford health services. The table below shows the gross rent in Palm Beach County and Florida in 2014. In 2014, the median dollar amount (\$1,158) was greater than the median dollar amount in the state as a whole (\$998).

TABLE 37: GROSS RENT, PALM BEACH COUNTY AND FLORIDA, 2014

	Palm Beach County		Florida	
	Count	Percent	Count	Percent
Occupied units paying rent	150,748	150,748	2,322,949	2,322,949
Less than \$200	1,180	0.8%	23,945	1.0%
\$200 to \$299	2,083	1.4%	42,904	1.8%
\$300 to \$499	3,855	2.6%	91,347	3.9%

TRANSPORTATION

Evidence supports that transportation barriers are an important barrier to healthcare access, particularly for those with lower incomes or the under/uninsured. This is significant because when patients cannot get to their health care provider, they miss the opportunity for evaluation and treatment of chronic illnesses, and as a result, may delay interventions that reduce or prevent disease complications. In addition, certain populations face unique circumstances that create transportation barriers, these populations include the elderly, children and veterans.¹⁵

NUMBER OF VEHICLES AVAILABLE

The ability or inability to secure reliable transportation determines the ability to access services, health-related and otherwise. During the health planning process, it is important to consider the location and availability of service providers to ensure that residents, regardless of their transportation needs, can access needed services. The table below shows the vehicles available by household in Palm Beach County and Florida in 2014. The percentage of households with at least one vehicle available (43.6%) was slightly higher than the state as a whole (41.5%). The percentage of households with two vehicles was 37.7%, slightly lower than the state as a whole (37.9%).

TABLE 38: VEHICLES AVAILABLE BY HOUSEHOLD, PALM BEACH COUNTY AND FLORIDA, 2014

	Palm Beach County		Florida	
	Count	Percent	Count	Percent
Occupied housing units	529,729	529,729	7,217,508	7,217,508

CRIME

Crime and violence experienced by individuals living in a community is an important public health issue. Violence can lead to premature death or cause non-fatal injuries, and people who survive violent crimes may experience mental distress and reduced quality of life. In communities where violence frequently occurs, residents may be less likely to exercise and to use community resources like parks and playgrounds that would otherwise promote both healthy behaviors and social interaction. The communities most at risk of exposure to violence are those with socioeconomically disadvantaged populations, such as those living below the poverty level, experiencing unemployment or with low educational attainment.¹⁶

The prevalence of crime in an area provides an indication of the safety of an area. Crime can affect not only the physical health of residents, but mental health as well. The table below shows total arrests in Palm Beach County in 2014 and 2015. The arrest rate per 100,000 in 2015 was 3526.5, down from 4075.2 in 2014. It should be noted that there were fewer juvenile arrests in 2015 (4,071) than in 2014 (4,438).

TABLE 39: TOTAL ARRESTS, PALM BEACH COUNTY, 2014 AND 2015

A deeper look into the types of arrests in an area further highlights the physical safety of an area. During the health planning process, the health system can better prepare emergency and mental and behavioral health service providers to address growing issues as they affect the wellbeing of a community. In the tables below, arrests by charge are displayed for Palm Beach County in 2015. In Palm Beach County, the number of drug arrests were the greatest at 7,476, followed by larceny at 5,550, and simple assault at 3,964.

HEALTH STATUS PROFILE

The following section provides data on Palm Beach County's health status for various health indicator categories including: Maternal and Child Health, Behavioral Health, Morbidity and Mortality.

MATERNAL AND CHILD HEALTH

PRENATAL CARE

Starting prenatal care early and receiving it regularly throughout a pregnancy improves the chances of a healthy birth. Most practitioners recommend scheduling visit by 8 weeks gestation in the first trimester of pregnancy. The table below shows the births to mothers who received prenatal care during the first trimester of their pregnancy for the years 2011-2015. Trimester prenatal care is calculated as the time elapsed from the date of the last menstrual period to the date of the first prenatal care visit. In Palm Beach County, 76.3% of mothers received prenatal care during the first trimester in 2015, similar to the state's overall rate of 79.3%.

TABLE 42: BIRTHS TO MOTHERS WITH 1ST TRIMESTER PRENATAL CARE, PALM BEACH COUNTY AND FLORIDA, 2011- 2015

Year	Palm Beach County		Florida	
	Count	Rate (%)	Count	Rate (%)
2011	9,804	76.7	154,294	80.3
2012	9,820	75.8	159,307	80.0
2013	9,935	76.1	159,880	79.9
2014	10,028	75.7	160,186	79.4
2015	10,336	76.3	161,643	79.3

Source: Florida Department of Health, Bureau of Vital Statistics, 2015

Note: Trimester prenatal care began is calculated by the time elapsed from the date of the last menstrual period to the date of the first prenatal care visit.

Compiled by: Health Council of Southeast Florida, 2016

It recommended that prenatal care visits are conducted throughout the pregnancy, with visits schedule every two weeks during the third trimester and even once a week the closer a mother is to the due date.¹⁷ The table below shows the number and percentage of births to those mothers with third trimester prenatal care for the years 2011-2015. In 2015, 6.0% of mothers received prenatal care beginning in the third trimester, 2.1 percentage points higher than the state of Florida. The rate of births to mothers with third trimester prenatal care in Palm Beach County has steadily increased from 2011 to 2015.

KOTELCHUCK INDEX

The Kotelchuck Index, also called the Adequacy of Prenatal Care Utilization (APNCU), uses initiation of prenatal care and number of prenatal visits for calculating adequate prenatal care. The table below shows births by the Kotelchuck index and by mother's education level in 2015. In Palm Beach County, 12,484 or 83.9% of births were to mothers that have a high school diploma or higher, while 16.1% were to mothers with less than a high school diploma. Among mothers with a high school diploma or higher, 1,488 or 67.2% had inadequate prenatal care, while 727 or 32.8% of those with less than a high school diploma had inadequate prenatal care.

TABLE 44: BIRTHS BY KOTELCHUCK PRENATAL CARE INDEX BY MOTHER'S EDUCATION, PALM BEACH COUNTY, 2015

OVERWEIGHT AND OBESITY

Being overweight or obese while pregnant can place a mother and her baby at risk for several adverse health outcomes, including gestational diabetes, Preeclampsia, neural tube defects, preterm birth and even stillbirth.¹⁸

The tables below show the number and percentage of births to overweight and obese mothers at the time pregnancy occurred in Palm Beach County and in Florida for the years 2011-2015. During the time period shown, the percent of births to overweight mothers at the time pregnancy occurred in Palm Beach County ranged from 23.9% (the lowest) in 2012 to 25.6% (the highest) in both 2014 and 2015. In 2015, the percent of births to overweight mothers at the time pregnancy occurred in Palm Beach County (25.6%) was slightly higher than that of the state (24.5%).

TABLE 45: BIRTHS TO OVERWEIGHT MOTHERS AT THE TIME PREGNANCY OCCURRED, PALM BEACH COUNTY AND FLORIDA, 2011-2015

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2011	3,345	24.2	50,524	23.7
2012	3,336	23.9	50,636	23.8
2013	3,574	25.2	51,950	24.1

2015	3,807	25.6	55,049	24.5

Source: Florida Department of Health, Bureau of Vital Statistics, 2015

Compiled by: Health Council of Southeast Florida, 2016

In a similar fashion, the percentage of births to obese mothers at the time of pregnancy in Palm Beach County (19.1%) was slightly below the state overall (21.9%). Palm Beach County has seen a steady increase in the percentage of births to obese mothers from 2011 to 2015, similar to Florida overall.

TABLE 46: BIRTHS TO OBESE MOTHERS AT THE TIME PREGNANCY OCCURRED, PALM BEACH COUNTY AND FLORIDA, 2011-2015

WIC

The Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) provides federal grants to States for supplemental foods, health care referrals, and nutrition education for low-income pregnant, breastfeeding, and non-breastfeeding postpartum women, and to infants and children up to age five who are found to be at nutritional risk.¹⁹

The table below shows the number of individuals eligible to receive WIC benefits who were served for the years 2011 through 2015. In 2015, the WIC eligible individuals served decreased substantially from 92.2% in 2014 to 72.8%.

TABLE 47: WIC ELIGIBLES SERVED, PALM BEACH COUNTY AND FLORIDA, 2011-2015

Year	Palm Beach County		Florida	
	Count	Rate (%)	Count	Rate (%)
2011	30,193	91.6	491,267	84.6
2012	29,484	88.9	477,368	80.4
2013	30,352	91.6	488,961	83.8

OVERWEIGHT AND OBESE

The percentage of children who are participating in WIC and who are overweight and obese can provide greater insight into the availability of healthy, nutritious foods. It can also illuminate the need for nutrition education among families participating in WIC. The table below shows the number of WIC children greater than or equal to 2 years old who are overweight or obese in Palm Beach County and in Florida from 2011 to 2015. In 2015, the percentage of children who were overweight or obese was 31.4%, higher than the state as a whole (26.3%).

TABLE 48: WIC CHILDREN >= 2 WHO ARE OVERWEIGHT OR OBESE, PALM BEACH COUNTY AND FLORIDA, 2011-2015

BIRTH RATES

TOTAL BIRTHS

The number of total births can indicate an increase or decrease in the population of an area. During the health planning process, a health system can better adapt to the services needed by a growing, younger sector of the population. The table below shows the counts and rates of birth in Palm Beach County and Florida from 2011 to 2015. The rates during this time period in Palm Beach County have been slightly lower than rates in Florida overall. In 2015, there were 14,873 live births in Palm Beach County, a slightly lower rate at 10.8 per 1,000 than that of Florida's at 11.3 per 1,000.

TABLE 49: TOTAL RESIDENT LIVE BIRTHS, PALM BEACH COUNTY AND FLORIDA, 2011-2015

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2011	13,797	10.4	213,237	11.3
2012	13,936	10.5	212,954	11.2
2013	14,198	10.5	215,194	11.1
2014	14,433	10.6	219,905	11.2
2015	14,873	10.8	224,273	11.3

Source: Florida Department of Health, Florida Bureau of Vital Statistics, 2015

Compiled by: Health Council of Southeast Florida, 2016

The table below reflects the birth counts and rates for the state of Florida, Palm Beach County, and surrounding counties in 2015. In comparison to the surrounding counties, Palm Beach County has the fourth largest rate of resident live births at 11.3 per 1,000.

TABLE 50: TOTAL RESIDENT LIVE BIRTHS, PALM BEACH COUNTY, FLORIDA, AND SURROUNDING COUNTIES, 2015

	Count	Rate
Florida	224,273	11.3
Palm Beach	14,873	10.8

BIRTHS BY MOTHERS AGE AND RACE

A deeper look into the age and race of mothers giving birth can inform the health system of needed improvement in the areas of reproductive health within certain populations. The table below shows the birth counts by mothers' age and race in Palm Beach County. A majority of births (66.7%) in 2015 were to mother's who are identified as "White", followed by mothers who are identified as either "Black" or "Other" at 33.2%. Among mothers who are identified as "White", 3,146 or 31.7% of births were to mothers ages 30-34. Among those who are identified as "Black" or "Other", 1,437 or 29.1% of births were to mothers ages 25-29.

TABLE 51: BIRTHS BY MOTHERS AGE AND RACE, PALM BEACH COUNTY, 2015

Age	Race			
	White	Black & Other	Unknown	Total
0-14	1	3	--	4
15-17	109	66	1	176
18-19	259	187	1	447

TEENAGE BIRTH RATES AND REPEAT TEENAGE BIRTH RATES

Further examination into the teenage birth rates and repeat birth rates further informs the health system of which populations to target for reproductive health education and programs. The following tables display the repeat birth rates among teen mothers ages 15-17, 15-19, and 18-19.

The table below shows the counts and rates of repeat births to mothers ages 15-17 in Palm Beach County and Florida from 2011 to 2015. The rate of repeat teen births for the 15 to 17-year-old age group has fluctuated in the time period shown with the lowest percentage in 2013 at 6.3% and the highest at 12.4% in 2011. In 2015, the percent of repeat births to mothers ages 15-17 (9.1%) increased from 2013 (6.3%) and is slightly higher than that of Florida. When viewing the rates of repeat births, it is important to note that rates calculated on a small number of occurrences are affected considerably by even a small change in the number of occurrences.

TABLE 52: REPEAT BIRTHS TO MOTHERS AGES 15-17, PALM BEACH COUNTY AND FLORIDA, 2011-2015

Year	Palm Beach County		Florida	
	Count	Rate (%)	Count	Rate (%)
2011	33	12.4	391	8.3
2012	27	12.3	314	7.4
2013	12	6.3	274	7.4

2015	16	9.1	248	8.0

Source: Florida Department of Health, Bureau of Vital Statistics, 2015

Compiled by: Health Council of Southeast Florida, 2016

An examination of teen repeat births by race can inform the health system of disparities among certain subpopulations and help providers target their efforts to reduce repeat birth rates among teens. Shown below are the rates of repeat births in Palm Beach County and Florida to mothers ages 15-17 by race for the years 2011-2015. The highest percent of repeat births in Palm Beach County were to mothers who are identified as "White" at 12.8%, this rate is over nine percentage points higher than the percentage of repeat births (3.0%) to mothers who are identified as "Black" and "Other". The percentage of repeat births to mothers who are identified as "White" in Palm Beach County in 2015 was also higher than the percentage of repeat births to mothers who are identified as "White" in Florida (7.4%). The percent of mothers who are identified as "Black" and "Other" in Palm Beach County (3.0%) was significantly lower in 2015 than in Florida at 9.1%.

TABLE 53: REPEAT BIRTHS TO MOTHERS AGES 15-17 BY RACE, PALM BEACH COUNTY AND FLORIDA, 2011-2015

	Palm Beach County		Florida	
	White	Black and Other	White	Black and Other
2011	10.7	14.3	6.4	11.0
2012	17.3	7.3	6.6	8.8
2013	6.3	6.3	6.5	8.9
2014	7.4	8.1	7.3	7.4
2015	12.8	3.0	7.4	9.1

A deeper look into repeat births by ethnicity can highlight the need for culturally competent services within the health care system. Shown below are the percentages of repeat births to mothers ages 15-17 in Palm Beach County and Florida for the years 2011-2015. The percentages have fluctuated among both Hispanic and non-Hispanic mothers within Palm Beach County and Florida. In 2015, the percentage of repeat births to mothers ages 15-17 in Palm Beach County is the highest among mothers who are identified as Hispanic (12.4%) compared to mothers who are identified as non-Hispanic (5.8%). The percentage of repeat births to mothers who are identified as Hispanic in Palm Beach County in 2015 was nearly three percentage points higher than among Hispanic mothers in Florida overall (9.5%). The percentage of repeat births to mothers who are identified as non-Hispanic (5.8%) in Palm Beach County in 2015 was slightly lower than among Non-Hispanic mothers in Florida overall (7.3%).

TABLE 54: REPEAT BIRTHS TO MOTHERS AGES 15-17 BY ETHNICITY, PALM BEACH COUNTY AND FLORIDA, 2011-2015

The table below displays the counts and rates of repeat births to mothers ages 18-19 in Palm Beach County and Florida from 2011 to 2015. The rate of repeat teen births for the 18 to 19-year-old age group has fluctuated in the time period shown with the lowest percentage occurring in 2015 at 19.2% and the highest at 23.5% in 2011. In 2015, the percent of repeat births to mothers ages 18-19 (19.2%) is slightly higher than that of Florida (18.5%).

TABLE 55: REPEAT BIRTHS TO MOTHERS AGES 18-19, PALM BEACH COUNTY AND FLORIDA, 2011-2015

Year	Palm Beach County		Florida	
	Count	Rate (%)	Count	Rate (%)

As mentioned previously, an examination of teen repeat births by race can inform the health system of disparities among certain subpopulations and help providers target their efforts to reduce repeat birth rates among teens. The table below shows the rates of repeat births to mothers ages 18-19 by race in Palm Beach County and Florida for the years 2011-2015. In Palm Beach County, the higher percent of repeat births among mothers ages 18-19 were to mothers who are identified as "White" at 20.1%, and slightly higher percentage than that of mothers who are identified as "Black and Other" (18.2%). The percentage of repeat births to mothers who are identified as "White" in Palm Beach County is also slightly higher than the percentage in Florida (17.9%). The percentage of repeat births to mothers who are identified as "Black and Other" (18.2%) in Palm Beach County is also slightly higher than that of Florida (19.7%).

TABLE 56: REPEAT BIRTHS TO MOTHERS AGES 18-19 BY RACE, PALM BEACH COUNTY AND FLORIDA, 2011-2015

	Palm Beach County		Florida	
	White	Black and Other	White	Black and Other
2011	21.7	26.0	18.7	24.7

As mentioned previously, a deeper look into teen repeat births by ethnicity can highlight the need for culturally competent services within the health care system. Shown below are the percentages of repeat births to mothers ages 18-19 by ethnicity in Palm Beach County and Florida for the years 2011-2015. The percentages have fluctuated among both Hispanic and non-Hispanic mothers within Palm Beach County and Florida. In 2015, the percentage of repeat births to mothers ages 18-19 in Palm Beach County is the highest among mothers who are identified as Hispanic (23.4%) compared to mothers who are identified as non-Hispanic (16.2%). The percentage of repeat births to mothers who are identified as Hispanic in Palm Beach County in 2015 was slightly over three percentage points higher than among Hispanic mothers in Florida overall (20.1%). The percentage of repeat births to mothers who are identified as non-Hispanic (16.2%) in Palm Beach County in 2015 was slightly lower than among non-Hispanic mothers in Florida overall (17.8%).

BIRTH WEIGHT

Proper prenatal care and healthy behaviors during pregnancy can reduce the likelihood of low birth weight babies.

VERY LOW BIRTH WEIGHT

Having a low or very low birth weight can cause serious health problems for some babies. Very low birth weight babies can develop certain health conditions later in life, including diabetes, heart disease, high blood pressure, metabolic syndrome, and obesity.²⁰

The table below shows the number and percent of babies born at very low birth weight, under 1500 grams (~3.3 pounds) in Palm Beach County and in Florida in from 2011 to 2015. In Palm Beach County 1.4% of live births were very low birth weight babies, a percent slightly lower than the state's at 1.6%. It is important to note that rates calculated on a small number of occurrences are affected considerably by even a small change in the number of occurrences.

TABLE 61: LIVE BIRTHS UNDER 1500 GRAMS (VERY LOW BIRTH WEIGHT), PALM BEACH COUNTY AND FLORIDA, 2011-2015

Year	Palm Beach County		Florida	
	Count	Rate (%)	Count	Rate (%)

LOW BIRTH WEIGHT

The table below shows the count number and percent of babies born at low birth weight, under 2500 grams (~5.5 pounds) in Palm Beach County and Florida from 2011 to 2015. The percent of low birth weight babies was slightly lower in Palm Beach County at 8.5% than in the state (8.6%). It is important to note that rates calculated on a small number of occurrences are affected considerably by even a small change in the number of occurrences.

PRETERM BIRTHS

Preterm birth is the leading cause of newborn death. Those who survive are at risk for serious health problems. Babies born only four to six weeks early can develop breathing difficulties, feeding problems, jaundice, and poor brain functions.²¹

The table below shows the number of preterm births in Palm Beach County and Florida for the years 2011-2015. In 2015, the percentage of preterm births in Palm Beach County was slightly lower than the state percentage of 10.0%. Within the time period shown, the lowest percentage of preterm births in Palm Beach County was in 2013 and 2014 at 9.3%. The highest rate was in 2011 at 10.8%.

TABLE 62: PRETERM BIRTHS, PALM BEACH COUNTY AND FLORIDA, 2011-2015

Year	Palm Beach County		Florida	
	Count	Rate (%)	Count	Rate (%)
2011	1,491	10.8	21,994	10.3
2012	1,431	10.3	21,783	10.2

Further breakdown of preterm births by race can inform the health system of disparities among certain subpopulations and help providers target their efforts to reduce preterm birth rates. The table below shows the number of preterm births by race in Palm Beach County and Florida for the years 2011-2015. In 2015, the percentage of preterm births in Palm Beach County among the “Black and Other” populations was 12.4%, slightly lower than the state as a whole (12.6%). Within the time period shown, the lowest percentage of preterm births in Palm Beach County was in 2013 at 10.7%; the highest was in 2011 at 12.9%. The percentage of preterm births among the Black & Other population in the county was consistently higher than the White population, which indicates a health disparity for this indicator.

TABLE 63: PRETERM BIRTHS BY RACE, PALM BEACH COUNTY AND FLORIDA, 2011-2015

	Palm Beach County				Florida			
	White		Black & Other		White		Black & Other	
2011	892	9.7	598	12.9	14,187	9.3	7,727	12.8
2012	825	9.1	606	12.6	14,006	9.3	7,704	12.6

INFANT MORTALITY

INFANT DEATHS

The Florida Department of Health defines infant mortality as the death of a live-born baby during the first year of life and is represented by the infant mortality rate or the number of infant deaths per 1,000 live births.²² Between 2014 and 2018, the infant mortality rate for Palm Beach County and the State of Florida has remained relatively stable, however, at the state level, residents experienced a higher rate than at the county level (Table 64). In 2018, Palm Beach County residents exhibited an infant mortality rate of 4.8 infant deaths per 1,000 live births; compared to 6.0 per 1,000 statewide.

TABLE 64: INFANT DEATHS, PALM BEACH COUNTY AND FLORIDA, 2014-2018

Year	Palm Beach County		Florida	
	Count	Rate per 1,000 Live Births	Count	Rate per 1,000 Live Births
2014	69	4.8	1,327	6.0
2015	73	4.9	1,400	6.2
2016	64	4.3	1,380	6.1
2017	67	4.5	1,355	6.1
2018	73	4.8	1,334	6.0

²² Florida Department of Health. Infant Deaths [Internet]; 2020. Available from <http://www.flhealthcharts.com/charts/DataViewer/InfantDeathViewer/InfantDeathViewer.aspx?indNumber=0053>

The following table stratifies infant mortality rate by race for Palm Beach County and Florida for 2014 through 2018. In 2018, infants identified as Black and of Other race exhibited an infant mortality rate that was three times as high as the rate observed among infants identified as White (8.3 infant deaths per 1,000 live births compared to 2.9 per 1,000, respectively), indicating a significant health disparity. A similar pattern is observed at the state level, in which infants of Black and of Other race are disproportionately affected by infant mortality compared to infants identified as White.

TABLE 65: INFANT DEATHS BY RACE, PALM BEACH COUNTY AND FLORIDA, 2014-2018

Year	Palm Beach County				Florida			
	White		Black & Other		White		Black & Other	
	Count	Rate per 1,000 Live Births	Count	Rate per 1,000 Live Births	Count	Rate per 1,000 Live Births	Count	Rate per 1,000 Live Births

Table 65 stratifies infant mortality rate by race even further by depicting infants identified as Black and infants of Other race in separate categories for 2014 through 2018. In 2018, infants identified as Black continued to experience the highest infant mortality rate as in previous years with 8.8 infant deaths per 1,000 live births, followed by infants of Other race (5.5 per 1,000), and infants identified as White (2.9 per 1,000).

TABLE 66: INFANT DEATHS BY RACE, PALM BEACH COUNTY, 2014-2018

Year	White		Black		Other		Total	
	Count	Rate per 1,000 Live Births	Count	Rate per 1,000 Live Births	Count	Rate per 1,000 Live Births	Count	Rate per 1,000 Live Births

The need to include culturally appropriate services in a multicultural or diverse community is an important component of any public health effort that aims to reduce health disparities among residents of that community. The following table captures the number infant deaths and respective rates among Hispanic and non-Hispanic infants for Palm Beach County and the State of Florida for 2014 through 2018. In 2018, Hispanic infants residing in Palm Beach County exhibited an infant mortality rate that was slightly higher compared to the rate observed among non-Hispanic infants (5.2 and 4.5 infant deaths per 1,000 live births, respectively). By contrast, non-Hispanic infants statewide experienced a higher infant mortality rate than the rate observed among Hispanic infants (6.3 and 5.2 infant deaths per 1,000 live births, respectively). It is noteworthy that infant mortality rate in both geographies for both ethnic groups have remained relatively stable between 2014 and 2018.

TABLE 67: INFANT DEATHS BY ETHNICITY, PALM BEACH COUNTY AND FLORIDA, 2014-2018

Year	Palm Beach County				Florida			
	Hispanic		Non-Hispanic		Hispanic		Non-Hispanic	
	Count	Rate per 1,000 Live Births	Count	Rate per 1,000 Live Births	Count	Rate per 1,000 Live Births	Count	Rate per 1,000 Live Births
2014	18	4.3	51	5.0	304	4.9	995	6.3

Table 66 displays infant deaths and respective rates, in Palm Beach County, for Hispanic, non-Hispanic, and infants of Haitian ethnicity, as well as infants of unknown ethnic identity for 2014 through 2018. It is important to note that infants of unknown ethnicity comprise a substantially lower number of infant deaths compared to other ethnic groups, and they represent a population that is less than 300. As such, infant mortality rates among this group, although high, are considered unstable or unreliable for analysis when compared to other ethnic groups. In 2018, Infants of Haitian ethnicity exhibited a rate that is higher than Hispanic and non-Hispanic infants with 5.3 infant deaths per 1,000 live births; compared to 5.2 and 4.3 infant deaths per 1,000 live births, respectively. However, it is important to note that infant mortality among infants of Haitian ethnicity has been gradually decreasing since 2014—a 28.6% decrease in infant deaths was observed between 2014 and 2018.

TABLE 68: INFANT DEATHS BY ETHNICITY, PALM BEACH COUNTY, 2014-2018

Year	Hispanic		Haitian		Non-Hispanic		Unknown		Total

FETAL DEATHS

Fetal death refers to the spontaneous intrauterine death of a fetus at any time during pregnancy. Fetal deaths later in pregnancy are also sometimes referred to as stillbirths. The table below shows the fetal death counts and rates in Palm Beach County and Florida from 2011 to 2015. Within the time period shown, the rate was the lowest in 2012 (6.5 per 1,000 live births). The highest rate occurred in 2014 at 7.4 per 1,000 live births. In 2015, the fetal death rate was 6.9 per 1,000 live births for the county, slightly higher than Florida's (6.8 per 1,000).

TABLE 69: FETAL DEATHS PER 1,000 DELIVERIES, PALM BEACH COUNTY AND FLORIDA, 2011-2015

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2011	93	6.7	1,558	7.3
2012	91	6.5	1,530	7.1
2013	97	6.8	1,533	7.1
2014	108	7.4	1,576	7.1
2015	104	6.9	1,541	6.8

Further examination of fetal deaths by race can inform the health system of disparities among certain subpopulations and help providers target their efforts to reduce fetal mortality. The table below shows the fetal death counts and rates by race in Palm Beach County for the years 2011-2015. In 2015, the fetal death rate was the highest among Black fetuses at 13.2 per 1,000 deliveries for the county. The fetal death rate among the Black population was more than double that of the White population in the county, indicating a clear health disparity.

TABLE 70: FETAL DEATHS PER 1,000 DELIVERIES BY RACE, PALM BEACH COUNTY, 2011-2015

A deeper look into infant deaths by ethnicity can highlight the need for culturally competent services within the health care system. Shown below are the rates of fetal deaths per 1,000 deliveries by ethnicity in Palm Beach County for the years 2011-2015. The highest rate in 2015 was among fetuses of "Unknown" ethnicity at 150.0 per 1,000 deliveries. However, it should be noted that the count is significantly lower than the other ethnicities listed. The second highest rate in 2015 was among fetuses of Haitian ethnicity at 11.6 per 1,000 deliveries, followed by non-Hispanic (6.9) and Hispanic ethnicities (4.1).

TABLE 71: FETAL DEATHS PER 1,000 DELIVERIES BY ETHNICITY, PALM BEACH COUNTY, 2011-2015

	Hispanic		Haitian		Non-Hispanic		Unknown		Total

BREASTFEEDING

The benefits of breastfeeding include: creating a bond with mother and baby, providing all the vitamins and nutrients the baby needs in the first six months of life, providing antibodies that help fight off viruses and bacteria and lowering baby's risk of having allergies. Breastfed infants are more likely to gain the right amount of weight as they grow rather than become overweight. Research has also found that breast-fed babies have a decreased risk of dying of Sudden Infant Death Syndrome (SIDS), less likely to develop Type 2 diabetes and experience fewer hospitalizations for pneumonia. Maternal benefits to breastfeeding include: having a decreased risk of breast and ovarian cancer, a decrease likelihood of developing Type 2 diabetes and breastfeeding burns extra calories, so it may also help a mother lose weight.

In Palm Beach County, the number of mothers who initiated breastfeeding increased between 2014 and 2017 with a slight decrease observed in 2018. Overall, however, when the number of mothers who initiated breastfeeding are compared between 2014 and 2018, a 7.7% increase is observed in Palm Beach County; compared to a 3.1% increase statewide. In 2018, close to 89% of mothers in Palm Beach County initiated breastfeeding compared to 86.2% at the state level.

TABLE 72: MOTHERS WHO INITIATE BREASTFEEDING, PALM BEACH COUNTY AND FLORIDA, 2014-2018

Year	Palm Beach County		Florida	
	Count	Percent	Count	Percent
2014	12,392	85.9%	185,186	84.2%

IMMUNIZATION

Immunization is one of public health's leading health indicators and a primary defense against some of the most deadly and debilitating diseases known. If a community or population has 'herd immunity', the large number of individuals who are immune to a disease, such as those vaccinated, can reduce the probability of an infection spreading to those who are not immune. Because of advances in medical science, children can be protected against more diseases than ever before. Some diseases that once injured or killed thousands of children have been eliminated completely and others are close to extinction— primarily due to safe and effective vaccination.

The table below shows the percent of two-year olds who were immunized in Palm Beach County and Florida for the years 2011-2015. Within the time period shown, the lowest percentage of two-year olds who were immunized in Palm Beach County was the lowest in 2013 at 82.6% while the highest was in 2012 at 89.2%. The percentage of two-year olds in Palm Beach County who had received all of their immunizations in 2015 was 85.4%, just shy of the state at 85.5%.

TABLE 73: FULLY IMMUNIZED CHILDREN AGE TWO, PALM BEACH COUNTY AND FLORIDA, 2011-2015

Year	Palm Beach County	Florida
2011	88.6%	86.1%
2012	89.2%	83.0%
2013	82.6%	86.7%
2014	86.2%	85.7%
2015	85.4%	85.5%

The following table and figure show the number and percent of kindergarteners who were immunized in Palm Beach County and Florida. In the table, between the years 2012-2016, the percentage of kindergarteners who were immunized in Palm Beach County was the lowest in 2015 at 89.4% while the highest was in 2012 at 93.2%. The percentage of kindergarten students in Palm Beach County who had received all of their immunizations in 2016 was 90.7%, higher than the state's rate of 93.7%. The figure graphically depicts the kindergarten immunization level in Palm Beach County and in Florida from 2003 to 2016. Within the time period shown, the lowest rate occurred in 2015 at 89.4%, slightly less than four percentage points lower than the state (93.3%). In 2016, the rate in Palm Beach County increased slightly to 90.7%, three percentage points lower than in the state (93.7%).

TABLE 74: IMMUNIZATION LEVELS IN KINDERGARTEN, PALM BEACH COUNTY AND FLORIDA, 2012-2016

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate

VACCINE PREVENTABLE DISEASES

If a community or population has 'herd immunity', the large number of individuals who are immune to a disease, such as those vaccinated, can reduce the probability of an infection spreading to those who are not immune. The table below shows the selected vaccine preventable disease rates for Diphtheria, Acute Hepatitis B, Measles, Mumps, Pertussis, Rubella, Tetanus, and Polio in Palm Beach County and Florida from 2010 to 2014. There were 39 cases in 2014, the lowest since 2010. In 2015, the rate within the county (2.9 per 100,000) was less than that of Florida at 5.8 per 100,000.

TABLE 75: SELECTED VACCINE PREVENTABLE DISEASE RATE, PALM BEACH COUNTY AND FLORIDA

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2010	39	3.0	659	3.5
2011	41	3.1	569	3.0
2012	53	4.0	876	4.6
2013	57	4.2	1,120	5.8
2014	39	2.9	1,130	5.8

BEHAVIORAL HEALTH

This section provides insight on: mental health indicators, alcohol use and suicide.

MENTAL HEALTH

Mental health includes emotional, psychological, and social wellbeing. How we handle stress, relate to others, and make choices is determined by our mental health. The status of mental wellbeing is important at every stage of life, from childhood and adolescence through adulthood. The tables below shows the percentage of adults with good mental health in Palm Beach County and Florida for the years 2007, 2010, and 2013. Since 2007 in Palm Beach County, the percentage has decreased slightly, from 92.2% in 2007 to 90.4% in 2013. The percentage of adults with good mental health in 2013 (90.4%), is slightly higher than the state as a whole (87.3%).

TABLE 76: ADULTS WITH GOOD MENTAL HEALTH, PALM BEACH COUNTY AND FLORIDA, 2007, 2010, 2013

Year	Palm Beach County	Florida
2007	92.2%	90.3%
2010	90.6%	88.2%
2013	90.4%	87.3%

The status of adults with poor mental health on more than 14 days of the past 30 days can help mental and behavioral health providers within the health system better understand the need for services among residents. The table below shows the percentage of adults who reported having poor mental health on more than 14 days of the past 30 days in Palm Beach County and Florida in 2007, 2010, 2013, and 2016. Since 2007 there has been an increase in the percentage of residents in Palm Beach County who report having poor mental health, with a 21.9% increase observed between 2013 and 2016. It is noteworthy that in 2016, more residents in the County reported having poor mental health than the State overall (11.7% compared to 11.4%, respectively).

Further examination into the effects of poor physical or mental health among residents can further illustrate the need for mental and behavioral health services within the health system. The table below shows the percentage of adults whose poor physical or mental health kept them from usual activities (more than 14 of the past 30 days) in Palm Beach County and Florida in 2007, 2010, and 2013. Among the years shown, the highest percentage was in 2007 at 17.5%. In 2013, the percentage was the lowest at 11.4%, five percentage points lower than the state as a whole (16.4%).

This table depicts the number and percentage of hospital inpatient discharges in Palm Beach County due to mental disorders as a primary diagnosis with the exclusion of alcohol-induced mental disorders. Mental disorders that satisfy this criterion include schizophrenia, schizotypal, delusional and other non-mood psychotic disorders; mood disorders; and anxiety, dissociative, stress-related, somatoform and other non-psychotic mental disorders. In 2018, there were a total of 11,312 hospital inpatient discharges for this condition and constitutes 6% of the total number of hospital inpatient discharges observed in Palm Beach County. Between 2017 and 2018, there was a slight increase in the number of hospital inpatient discharges for this condition which represents less than 1% increase.

TABLE 80: HOSPITALIZATIONS FOR MENTAL DISORDERS EXCEPT DRUG AND ALCOHOL-INDUCED MENTAL DISORDERS, PALM BEACH COUNTY RESIDENTS, 2017-2018

Year	Total Discharges	Principal Diagnosis

The subsequent table portrays hospital discharges due to mental disorders as a primary diagnosis, among Palm Beach County residents, stratified by admission source for 2018. Most discharges, 8,467 or 60.8%, derived from a non-health care facility as a point of origin; followed by those that were transferred from a hospital with close to 19% of total number of discharges attributed to this condition. The least frequent source of admission are transfers from skilled nursing facilities or intermediate Care facilities with less than 1% of the total.

TABLE 82: HOSPITALIZATIONS FOR MENTAL DISORDERS BY ADMISSION SOURCE, PALM BEACH COUNTY RESIDENTS, 2018

Admission Source	Total Discharges	
	Count	Percent
Total	13,916	100.0%

ALCOHOL CONSUMPTION AND SUBSTANCE ABUSE

There is a causal relationship between alcohol consumption and a range of mental and behavioral disorders, including alcohol dependence, noncommunicable conditions such as liver diseases, some cancers, cardiovascular diseases, as well as injuries resulting from violence and road accidents. There is also strong correlation between harmful use of alcohol and incidence of infectious diseases such as tuberculosis and pneumonia, as well as the course of HIV/AIDS.²³

The table below shows the adults who engage in heavy or binge drinking in Palm Beach County and Florida in 2002, 2007, 2010, 2013, and 2016. Among the years shown, there has been an increase in the percentage of adults residing in Palm beach County who engage in heavy or binge drinking; with a percentage of 17.8 in 2016, higher than the statewide percentage of 17.5%.

Children who engage in some level of alcohol consumption are more likely to engage in high levels of alcohol consumption as young adults. Health outcomes can be negatively affected by alcohol consumption, which has been shown to cause conditions such as liver disease later on in life. The table below shows the percent of middle school students who have used alcohol in the past 30 days in Palm Beach County and Florida in 2008, 2010, 2012, 2014, and 2016. In 2016, 9.2% of middle school students used alcohol in the past 30 days which constitutes a 20.0% decrease since the last reporting period (2014). At the state-level a 17.8% decrease was observed in 2016 compared to the previous reporting period.

High school students who engage in alcohol consumption are more likely to engage in alcohol consumption as adults, potentially resulting in negative health outcomes later in life. The table below shows the percent of high school students who have used alcohol in the past 30 days in Palm Beach County and Florida in 2008, 2010, 2012, 2014, and 2016. Based on the years shown, at the county- and state-level, there has been a decrease in the percentage of high school students who have used alcohol in the past 30 days. In 2016, the countywide rate was 27.0% compared to 25.5% at the state-level.

TABLE 88: PERCENT OF HIGH SCHOOL STUDENTS WHO HAVE USED ALCOHOL IN THE PAST 30 DAYS, PALM BEACH COUNTY AND FLORIDA, SELECT YEARS 2010-2016

	Palm Beach County	Florida
2008	42.2%	39.5%

Binge drinking among high school students can be especially precarious as many students are beginning to drive at this time. The table below illustrates the percent of high school students reporting binge drinking in Palm Beach County and Florida in 2008, 2010, 2012, 2014, and 2016. Even though both geographies have experienced a decline in the percentage of high school student who report binge drinking among the reporting years, a more pronounced decrease was observed in 2016 at the county-level compared to the state overall (38.4% decrease compared to a 20.4% decrease).

Between 2015 and 2017, Palm Beach County residents experienced a substantial increase in the number of deaths due to drug overdose; with a 131% increase observed when years 2015 and 2017 are compared. However, between 2017 and 2018, the number of deaths and rate due to drug overdose decreased significantly. For instance, in 2018 there were 36.5 deaths per 100,000 population compared to 60.2 deaths per 100,000 observed in 2017. It is important to note that between 2015 and 2018, the countywide death rate due to drug overdose was substantially higher than the statewide rate.

TABLE 90: DRUG OVERDOSE DEATHS, PALM BEACH COUNTY, 2015-2018

According to the National Institute of Drug Abuse, opioids are a class of drugs that include illegal drugs, such as heroin; as well as pain relievers available legally with a doctor's prescription which include oxycodone, hydrocodone, codeine, morphine, among others.²⁴ When these medications are taken as prescribed by a doctor for a short period of time, they are safe; however, since they produce euphoria, they could be misused leading to dependence, addiction, overdose, and death.

At the county and state level, the death rate due to opioid overdose fluctuated between 2015 and 2018, with the highest rate observed in 2017 for both geographies with 51.0 and 21.9 deaths per 100,000 population, respectively. In 2018, a decrease in death rates due to opioid overdose was observed in both geographies; with a more pronounced decrease observed at the county level, which represented a 37.6% decrease.

According to the Centers for Disease Control and Prevention (CDC), utilizing ED data to track trends in non-fatal drug overdoses is a crucial strategy to effectively expand overdose surveillance that would assist public health professionals to tailor prevention resources to residents who are at high risk.²⁵ Table 85 highlights the number of patients in Palm Beach County and the State of Florida with an identified non-fatal all drug overdose during an emergency medical service transport. Between 2015 and 2017, there was an increasing pattern in the number of non-fatal drug overdoses for both geographies; with a marked decrease observed in Palm Beach County between 2017 and 2018 which represents a 45.9% decrease.

In 2018, there were 2,523 non-fatal opioid-involved overdoses in Palm Beach County—substantially lower from the previous year, which represents a 51% decrease. At the state level, a 24.2% decrease was observed between 2017 and 2018 with respect to the number of non-fatal opioid-involved overdoses. It is important to note that the number of non-fatal opioid-involved overdoses increased dramatically between 2015 and 2016 at the county and state level.

VIOLENCE AND INJURY

SUICIDE

Within the U.S., suicide is one of the leading causes of death among young people. It is the third leading cause of death among residents between the ages of 15 and 24, and the second leading cause of death among 25-34 year-old residents. The long-term goal of public health is to reduce people's risk for suicidal behavior by addressing factors at the individual, familial, community, and societal levels of the social ecology.²⁶

The age-adjusted suicide rates for Palm Beach County and the State of Florida remained relatively stable between 2014 and 2018; both geographies exhibiting similar rates. For instance, in 2018 the age-adjusted suicide rate for Palm Beach County was 15.4 per 100,000 compared to the statewide rate of 15.3 per 100,000.

TABLE 94: AGE-ADJUSTED SUICIDE DEATH RATE, PALM BEACH COUNTY AND FLORIDA, 2014-2018

The following table portrays the number of suicide deaths in Palm Beach County according to age group for five three-year rolling periods. In all age groups, a certain degree of fluctuation is observed with respect to the number of suicide deaths; with the highest number of suicide deaths exhibited by residents between the ages of 50 and 64 for all rolling periods. For rolling period 2016-2018, there were 216 suicide deaths among residents 50-64; followed by 35-49 (143); and 65-79 (133).

TABLE 95: SUICIDE DEATH COUNT BY AGE, PALM BEACH COUNTY, 2012-2018 (3-YEAR ROLLING)

Year	0-18	19-34	35-49	50-64	65-79	80+	Total
2012-2014	12	104	157	202	118	62	655

Compiled by: Health Council of Southeast Florida, 2020

When the crude suicide death rate is taken into account, it is observed that for the five three-year rolling periods residents between the ages of 50 and 64 have historically exhibited the highest rate; and for rolling period 2016-2018, this population experienced a rate of 25.6 deaths per 100,000 population. The second highest suicide death rate for rolling period 2016-2018 was observed among residents between the ages of 65 and 79 with 20.0 deaths per 100,000, followed by age group 35-49 (18.8 per 100,000).

TABLE 96: CRUDE SUICIDE DEATH RATE BY AGE, PALM BEACH COUNTY, 2012-2018 (3-YEAR ROLLING)

Year	0-18	19-34	35-49	50-64	65-79	80+	Total
2012-2014	1.4	14.1	20.5	25.5	20.2	19.8	16.2
2013-2015	1.3	16.7	19.3	26.8*	20.7	17.1*	16.6*

* Indicates the county rate is statistically significantly different from the statewide rate

MORBIDITY

Morbidity is another term for illness. The tables and figures below illustrate the numbers and rates of hospitalizations for the following disease: coronary heart disease, diabetes, stroke, Chronic Lower Respiratory Disease (CLRD), cancer, Alzheimer's disease, enteric disease, overweight and obesity and infectious disease.

CORONARY HEATH DISEASE

Coronary heart disease (CHD) is the leading cause of death for both men and women in the United States. Per the CDC, about 610,000 people die of heart disease in the United States every year, causing 1 in every 4 deaths.

The table below shows the counts and age-adjusted hospitalization rates from coronary heart disease from 2010-2014. The rate in the county has steadily decreased over time from a rate of 296.9 per 100,000 in 2010 down to 235.2 per 100,000 in 2014. Palm Beach County has remained below the state rate each of the last five years.

TABLE 97: AGE-ADJUSTED HOSPITALIZATIONS FROM OR WITH CORONARY HEART DISEASE, PALM BEACH COUNTY AND FLORIDA, 2010-2014

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2010	6,115	296.9	98,075	375.6
2011	5,756	279.8	91,344	345.0
2012	5,405	264.4	85,179	338.0

The table below shows the percent of adults who have ever been told they had hypertension in Palm Beach County between 2002-2013. Over the last decade the percentage of adults living in Palm Beach County who have been told they had hypertension has increased from 26.8% in 2002 to 34.4% in 2013. Although the county rates have increase, they have remained below the state rate throughout this time period.

The following table describes the rate of hospitalizations from or with coronary heart disease in Palm Beach County and Florida between 2010-2014. Over the last five years, the rate of hospitalizations from or with coronary heart disease has steadily decreased from 296.9 per 100,000 in 2010 to 235.2 per 100,000 in 2014. Although the state rates followed the same pattern, Palm Beach County rates have remained below the state levels continuously.

TABLE 100: HOSPITALIZATIONS FROM OR WITH CORONARY HEART DISEASE, PALM BEACH COUNTY AND FLORIDA, 2010-2014

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate

Proper diagnosis is critical for heart health and preventing heart disease. Per the CDC, about 47% of sudden cardiac deaths occur outside of the hospital. This suggests that many people with heart disease do not act on early warning signs. The table below illustrates the percentage of adults who have ever been told they had angina or coronary heart disease in Palm Beach County and in Florida. In 2013, 6.3% of adults in Palm Beach County were told they had angina or coronary heart disease, slightly higher than the state rate of 5.0%.

The following table depicts the counts and rates of hospitalizations from congestive heart failure in Palm Beach County and in Florida. Rates for both Palm Beach County and the state have declined since 2010. In Palm Beach County, the rate of hospitalizations from congestive heart failure has fallen from 138.9 in 2010 to 75.5 in 2014. Although this is an improvement, the county rate (75.5) was significantly higher than the state (62.5) in 2014.

TABLE 102: HOSPITALIZATIONS FROM CONGESTIVE HEART FAILURE, PALM BEACH COUNTY AND FLORIDA, 2010-2014

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2010	3,229	138.9	34,914	133.5

DIABETES

Diabetes is a disease in which blood glucose levels are abnormal. Diabetes can have disastrous effects to a person's health if left untreated or improperly managed (blindness, kidney failure, loss of limbs, etc.). The World Health Organization states that total deaths from diabetes are projected to rise by more than 50% in the next 10 years. Most notably, they are projected to increase by over 80% in upper-middle income countries.

Between 2014 and 2018, the age-adjusted hospitalization rate from or with diabetes in Palm Beach County and the State of Florida has remained stable—with a higher rate observed at state level compared to the county level for all five years. In 2018, Palm Beach County residents experienced an increase in the number of hospitalizations from or with diabetes from the previous year (from 38,679 to 39,282); however, the age-adjusted hospitalization rate due to this condition decreased slightly (from 1,826.6 to 1,813.9 hospitalizations per 100,000 population). A similar trend was observed at the state level.

TABLE 103: HOSPITALIZATIONS FROM OR WITH DIABETES, PALM BEACH COUNTY AND FLORIDA, 2014-2018

Year	Palm Beach County		Florida	
	Count	Rate per 100,000	Count	Rate per 100,000
2014	36,212	1,797.9	594,637	2,321.2
2015	37,574	1,835.0	617,606	2,350.4

The table below depicts the number of hospitalizations and age-adjusted hospitalization rates from or with diabetes in Palm Beach County and Florida according to racial identity between 2014 and 2018. In both geographies, it is important to highlight that residents of Black and of Other racial identity have been disproportionately affected by this condition in comparison to White residents. For instance in 2018, at the county level, the hospitalization rate due to this condition among residents of Black and Other racial identity was three times as high as the rate observed among White residents (3,845.6 per 100,000 compared to 1,372.4 per 100,000, respectively); and at the state level the rate was two times as high (4,219.5 per 100,000 compared to 1,920.4 per 100,000).

TABLE 104: HOSPITALIZATIONS FROM OR WITH DIABETES BY RACE, PALM BEACH COUNTY AND FLORIDA, 2014-2018

The subsequent table presents the number of hospitalizations and age-adjusted hospitalization rates from or with diabetes in Palm Beach County and the State of Florida according to ethnic identification for 2014 through 2018. Between 2014 and 2018, Hispanic residents in Palm Beach County exhibited a hospitalization rate that was higher than non-Hispanic residents; with a slight decrease observed among both groups in 2018 from the previous year (1,855.0 per 100,000 and 1,794.2 per 100,000, respectively). A similar trend was observed at the state level between 2014 and 2016, however, in 2017 and 2018, non-Hispanic residents exhibited a rate that was higher than Hispanic residents.

In 2017, there were 3,137 hospital discharges due to diabetes as a principal diagnosis among Palm Beach County residents (Please refer to Table 98). Table 98 also depicts contributing diagnosis (Other diagnosis 1-6) and respective instances in which diabetes was captured in the patient's record stratified by age. It is important to note that Other diagnosis 6 accounted for the greatest number of instances (6,705) and constitutes close to 20.0% of the total (primary diagnosis in addition to Other diagnosis 1-6). Residents aged 65 and older accounted for the greatest number of instances with 19,880 or 58.3% of the total.

TABLE 106: HOSPITALIZATIONS FROM DIABETES BY AGE, PALM BEACH COUNTY AND FLORIDA, 2017

	Principal Diagnosis	Other Diagnosis						Total
		1	2	3	4	5	6	
0-17	136	22	20	11	5	1	0	195

Per the CDC, 9 out of 10 people with prediabetes, a condition when a person's blood sugar level is higher than normal but not high enough yet to be diagnosed as type 2 diabetes, do not know they have it.

The following tables depicts the percentage of adults who have ever been told they had diabetes in Palm Beach County and the State of Florida from 2007 through 2016. In 2017, close to 11.0% of Palm Beach County residents have ever been told they had diabetes compared to approximately 12.0% at the state level. Between 2007 and 2016, Palm Beach County experienced a 21.3% increase in the number of residents who reported they have ever been told they had diabetes; while at the state level a 35.6% increase was observed.

TABLE 107: ADULTS WHO HAVE EVER BEEN TOLD THEY HAD DIABETES, PALM BEACH COUNTY AND FLORIDA, SELECT YEARS 2007-2016

	Palm Beach County	Florida
2007	8.9%	8.7%
2010	10.1%	10.4%
2013	11.0%	11.2%
2016	10.8%	11.8%

STROKE

Per the CDC, on average one American dies from a stroke every four minutes. Stroke is the fifth leading cause of death in the United States and is a major cause of adult disability.

The subsequent table illustrates the number of hospitalizations due to stroke and respective age-adjusted rates per 100,000 population in Palm Beach County and the State of Florida between 2013 and 2017. In 2017, the age-adjusted rate due to stroke in Palm Beach County was 185.7 per 100,000 population; which is lower than the statewide rate of 231.6 per 100,000 population. It is important to note that even though a decreasing trend has been observed in both geographies during this time frame (2013-2017), this could be the result of the introduction of the ICD-10 coding methodology in 2015 which differ from previous years.

TABLE 110: AGE-ADJUSTED HOSPITALIZATIONS FROM STROKE, PALM BEACH COUNTY AND FLORIDA, 2013-2017

Year	Palm Beach County		Florida	
	Count	Rate per 100,000	Count	Rate per 100,000

In 2017, there were 4,287 hospital discharges due to stroke as a principal diagnosis among Palm Beach County residents (Please refer to Table 102). When contributing diagnoses, aside from primary diagnosis, are taken into consideration (Other diagnosis 1-30), 7,539 instances were observed. In other words, 7,539 instances due to stroke were captured in the patient's record in Other diagnosis 1 through 30. Residents aged 65 and older accounted for the greatest number of instances (8,555), which constitutes 72.3% of the total number of instances.

CHRONIC LOWER RESPIRATORY DISEASE (CLRD)

Chronic obstructed pulmonary disease, emphysema, chronic bronchitis and other respiratory illnesses are all grouped together under the name Chronic Lower Respiratory Disease (CLRD). These are a group of disease that affect the airways and other structures of the lungs. Per the CDC, the following groups were more likely to report COPD: people aged 65-74 years, Non-Hispanic Whites, women, individuals who were unemployed, retired, or unable to work, individuals with less than a high school education, people with lower incomes, individuals who were divorced, widowed, or separated, current or former smokers and those with a history of asthma.

This table highlights the number of hospitalizations due to CLRD and respective age-adjusted rates per 100,000 population in Palm Beach County and the State of Florida overall. Rates for both geographies have fluctuated between 2013 and 2017 and for the most part, the statewide rate is higher than the countywide rate. For instance, in 2017 the rate observed in Palm Beach County was 345.1 per 100,000 population compared to 362.5 per 100,000 at the state level.

Compiled by: Health Council of Southeast Florida, 2019

In 2017, there were 6,549 hospital discharges due to CLRD as a principal diagnosis among Palm Beach County residents. When contributing diagnosis are taken into consideration (Other diagnosis 1-30), a total of 31,745 instances due to CLRD were observed (i.e. CLRD appeared in the patient's record in a sequence other than primary diagnosis). Residents aged 65 and older accounted for the greatest number of instances (24,418) which comprises 63.8% of the total number of instances observed due to CLRD (primary diagnosis and contributing Other diagnosis 1-30).

CANCER

Cancer has a major impact on individuals, their families, community and society. The National Cancer Institute projected that the most common cancers in 2016 would be breast cancer, lung and bronchus cancer, prostate cancer, colon and rectum cancer, bladder cancer, melanoma of the skin, non-Hodgkin lymphoma, thyroid cancer, kidney and renal pelvis cancer, leukemia, endometrial cancer, and pancreatic cancer.

The following table lists the age-adjusted cancer incidence count and rates in Palm Beach County and the state. Between 2013-2014 the county and state saw increases in the age-adjusted incidences of cancer. Palm Beach County had a rate of 255.3 per 100,000 compared to the state rate of 364.7 per 100,000 in 2014.

TABLE 116: AGE-ADJUSTED CANCER INCIDENCE, PALM BEACH COUNTY AND FLORIDA, 2009-2013

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate

The following figure provides a visual representation of the disparities seen among Black & Other and Hispanic ethnicities when comparing age-adjusted rates of cancer incidences by race and ethnicity. While there is an obvious disparity among both Black & Other and Hispanics, Black & Other races are shown to have the highest incidences of cancer.

FIGURE 7: AGE-ADJUSTED RATE OF CANCER INCIDENCE BY RACE AND ETHNICITY, PALM BEACH COUNTY, 2009-2013

CERVICAL CANCER

The table below depicts the age-adjusted cervical cancer incidence by race in Palm Beach County and Florida between 2009-2012. The rate among whites has decreased steadily in the county and state during this time from. In 2013 the rate among whites in Palm Beach County (2.1 per 100,000) was lower than the state in the same year (4.0 per 100,000). The rate among Black & Other races in the county was considerably higher than the White population; in 2012, this disparity was 12-fold. In 2013 the rate of incidence among Blacks & Other was 13.0 per 100,000. This was just above the state rate (12.6 per 100,000).

TABLE 120: AGE-ADJUSTED CERVICAL CANCER INCIDENCE BY RACE, PALM BEACH COUNTY AND FLORIDA, 2009-2013

Year	Palm Beach County				Florida

OVERWEIGHT AND OBESITY

Overweight and obesity are complex health issues that can have profound negative impacts on an individual and community's health outcome if left untreated. Both overweight and obesity imply a condition of a person being of excess weight. Overweight means having more body weight than is considered normal or healthy for one's age or build while obesity is the condition of being obese, i.e., a body mass index (BMI) over 30. The overall increase in obesity among the nation and state is greatly influenced by a person's community and their ability to make healthy choices. Per the CDC, children and adults who are obese are at an increased risk of several serious health conditions including heart disease, type 2 diabetes, and cancer.

The following table represents the percentage of high school students who have been told they are overweight or obese has mostly increased from 2012 to 2018. The county's percentage has remained below that of the state; in 2018, the percentages were 29.7% and 30.5% respectively.

AIDS INCIDENCE

The table below shows the rate of AIDS cases in Palm Beach County and Florida between 2011-2015. Since 2013 both the county and state have seen a decrease in the rate of AIDS cases, however Palm Beach County's rates have remained slightly higher than the state during this time. In 2015, even after a decrease from the year before, the county rate of 11.9 per 100,000 was still higher than the state's 11.2 per 100,000.

TABLE 137: AIDS CASES, PALM BEACH COUNTY AND FLORIDA, 2011-2015

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2011	219	16.5	3,023	16.0
2012	210	15.8	2,849	15.0
2013	218	16.1	2,929	15.2
2014	172	12.6	2,291	11.7
2015	164	11.9	2,218	11.2

Source: Florida Department of Health, HIV/AIDS Section

Note: Generally, AIDS cases remained fairly stable in early 2000s, with an increase in 2004 due to increased CD4 testing statewide. Electronic laboratory reporting delays in late 2007 decreased cases in that year, while contributing to a spike in 2008. The expansion of electronic lab reporting increased the timeliness of reporting, which further contributed to the artificial spike in 2008 followed by an artificial dip in 2009 & 2010. Cases reported in correctional facilities are excluded from county totals, but are included in state total.

Preventable hospitalizations are determined using the Agency for Health Research and Quality (AHRQ) Ambulatory Sensitive ICD-10 Codes. Conditions that fall under this designation include asthma, diabetes, dehydration, Chronic Obstructive Pulmonary Disease (COPD), hypertension, among others, and are conditions in which timely and more effective care may decrease hospitalizations. High rates of hospitalizations for ambulatory sensitive conditions could be indicative of ineffective or insufficient prevention efforts, a shortage of primary care health services and resources or other issues creating barriers to obtaining timely care.

The following table highlights the number of hospitalizations and respective hospitalization rates due to preventable conditions for the population under the age of 65 residing in Palm Beach County and Florida for the years 2014 through 2018. At the state level, hospitalization rates due to preventable conditions exhibited a decreasing pattern between 2014 and 2018; while at the county level, a pronounced decrease was observed from 2016 through 2018. In 2018, Palm Beach County residents experience a hospitalization rate due to preventable conditions of 944.4 per 100,000; compared to the state level rate of 961.2 per 100,000.

FEDERAL HEALTH PROFESSIONAL SHORTAGE AREA (HPSA)

Health Professional Shortage Area (HPSAs) are populations, areas or institutions that were designated by the Health Resources and Services Administration (HRSA) to have shortages of primary health care, dental or mental providers. In order to be designated as HPSA, several criteria are referenced including: a rational need for services, a provider population ratio that falls below a set standard, and an occurrence of current health providers being over-utilized or inaccessible.

HPSA scores range from 1 to 25 for primary care and mental health, 1 to 26 for dental health, with higher scores indicating greater need. All Federally Qualified Health Centers and Rural Health Clinics that provide health services regardless of the ability to pay receive automatic facility HPSA designation.

When looking at the tables, HPSA FTE refers to the number of practitioners providing ambulatory patient care in the HPSA expressed as full-time equivalents.

PRIMARY CARE HEALTH PROFESSIONAL SHORTAGE AREA

The following table depicts the primary care health professional shortage areas in Palm Beach County as of December, 2016. HPSA are scored on a scale of 0-25 with higher scores indicating greater need. Genesis Community Health demonstrated the highest need (HPSA Score 18) followed by Health Care District of Palm Beach County and Low Income – Boca Raton (HPSA Score 17). Three HPSA's had an HPSA score of 16: Low Income – Greenacres, Foundcare Health Center, and Low Income – Boynton Beach.

TABLE 158: PRIMARY CARE HEALTH PROFESSIONAL SHORTAGE AREAS, PALM BEACH COUNTY, AS OF DECEMBER 2016

FEDERAL MEDICALLY UNDERSERVED AREAS/POPULATIONS

Medically Underserved Areas/Populations (MUAs/MUPs) are designated by Health Resources Service Administration (HRSA) using the following indicators: provider per 1,000 population ratio, percent of population at 100% of the Federal Poverty Level (FPL), percent of the population 65 and over, and infant mortality rate.

Eligibility of for MUA/P designation depends on the Index of Medical Underservice (IMU) calculated for the area or population proposed for designation. Under the established criteria, an area or population with an IMU of 62.0 or below qualifies for designation. The IMU scale is from 0 to 100, where represents completely underserved and 100 represents best served or least underserved. The IMU is calculated by assigning values to the four demographic and health indicators previously mentions, then adding the weighted values together. The figure below depicts the IMU scoring process.

FIGURE 8: INDEX OF MEDICAL UNDERSERVICE

MUPs are comprised of groups of individuals who face economic, cultural or linguistic barriers to accessing health care. MUAs are a who county or a group of urban census tracts in which residents have a shortage of personal health services.²⁸

The table below shows the Medically Underserved Areas/Populations (MUA/Ps) in Palm Beach County designated as of December, 2016. There are a total of eight designated MUA/Ps in the county. The area with the lowest score is 'Low Inc – Delray Beach' (IMU 46.70) followed by 'Low Inc- Greenacres (IMU 47.50).

TABLE 161: MEDICALLY UNDERSERVED POPULATIONS AND AREAS, PALM BEACH COUNTY, AS OF DECEMBER, 2016

Name	Identification Number	Index of Medical Underservice Score	MUA/P Designation Date
Low Inc - Boynton Beach	00570	56.20	9/4/2002
Low Inc - West Palm Beach	07064	59.90	6/22/2001

HEALTH INSURANCE

Stable health insurance coverage helps individuals get into the health care system. Uninsured people are: less likely to receive medical care, more likely to die early and more likely to have poor health status.²⁹ Lack of adequate coverage makes it difficult for people to get the health care they need and, when they do receive care, burdens them with medical bills. Access to comprehensive, quality care services is imperative for the achievement of health equity and for increasing the quality of a healthy life for everyone.

Based on the Florida Behavioral Risk Factor Surveillance System (BRFSS) survey, in 2016, there were close to 86% of adults residing in Palm Beach County with health insurance coverage—a 7.7% increase from the previous year. According to the last three years when the survey was taken, Palm Beach County experienced a higher percentage of adults with health insurance coverage than the state.

MEDICAID

The table below shows the median monthly Medicaid enrollment rates for Palm Beach County and Florida between 2009-2015. Though the rates for both the county and state have been on the increasing trend during this time, Palm Beach County has consistently lower rates of median monthly Medicaid enrollment. In 2015, the rate in Palm Beach County was 16,305.00 per 100,000 compared to the states 19,938.20 per 100,000.

TABLE 170: MEDIAN MONTHLY MEDICAID ENROLLMENT, PALM BEACH COUNTY AND FLORIDA, 2009-2015

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2009	139,313	10,603.40	2,678,520	14,314.60
2010	163,003	12,345.80	2,995,439	15,916.00
2011	173,243	13,052.20	3,128,693	16,524.10
2012	185,263	13,897.30	3,352,966	17,607.80
2013	198,730	14,719.90	3,611,417	18,693.70
2014	206,973	15,192.00	3,714,376	19,001.30
2015	225,275	16,305.00	3,959,891	19,938.20

FLORIDA KIDCARE

The table below depicts the rate of children under 5 covered by MediKids in Palm Beach County and Florida. To be eligible, families must fall within 133.01%-200% of the federal poverty line. From 2004-2014 the rate of children under 5 covered by MediKids has continuously increased and has remained above the state rate each year. In 2014, 3% of children under 5 in Palm Beach County and 2.7% in the state were covered by MediKids.

TABLE 171: CHILDREN UNDER 5 COVERED BY MEDIKIDS, PALM BEACH COUNTY AND FLORIDA, 2004-2014

Year	Palm Beach County		Florida	
	Count	Rate (%)	Count	Rate (%)
2004	2,780	3.8	35,348	3.3
2005	1,703	2.4	22,249	2.1
2006	1,306	1.8	16,827	1.5
2007	1,674	2.3	22,916	2.1
2008	2,163	2.9	29,901	2.6
2009	1,647	2.2	23,873	2.1

FEDERALLY QUALIFIED HEALTH CENTERS (FQHC)

Federally Qualified Health Centers (FQHCs) include all organizations receiving grants under Section 330 of the Public Health Service Act (PHS). FQHCs qualify for enhanced reimbursement from Medicare and Medicaid, as well as other benefits. FQHC must serve an underserved area or population, offer a sliding fee scale, provide comprehensive services, have an ongoing quality assurance program, and have a governing board of directors.³⁰

The figure below provides a visual depiction of the distribution of Federally Qualified Health Centers in Palm Beach County, as of December, 2016.

FIGURE 9: MAP OF FEDERALLY QUALIFIED HEALTH CENTERS (FQHC), PALM BEACH COUNTY, AS OF DECEMBER, 2016

COMMUNITY PERSPECTIVE

In order to glean the valuable insight from the community's residents, the Health Council of Southeast Florida (HCSEF) utilized a number of strategies including the Local Public Health System Assessment, community focus groups, and key informant interviews. While gathering primary, qualitative data is the most time-consuming and challenging piece of the process, it is a critical element to a comprehensive needs assessment. The purpose of this portion of the process was to collect the thoughts, opinions and concerns from various constituents in the community, including community stakeholders and residents.

THE LOCAL PUBLIC HEALTH SYSTEM ASSESSMENT

In August 2016, the Florida Department of Health in Palm Beach County (DOH-Palm Beach), in partnership with the Health Care District of Palm Beach County (HCD), undertook an initiative to conduct an assessment of the public health system in Palm Beach County. This Local Public Health System Assessment (LPHSA) was the first step in a larger comprehensive community health needs assessment occurring within the county. The Health Council of Southeast Florida (HCSEF) was retained to assist with the facilitation of the LPHSA process of gathering and analyzing information from community partners. This report is developed from the qualitative, primary data obtained directly from internal and external community stakeholders. These stakeholders represent a broad variety of agencies, providers, and community members, which were identified and engaged by DOH-Palm Beach and HCD, in collaboration with HCSEF, for this assessment process.

The results of this assessment seek to identify and improve the overall health and well-being of the residents of Palm Beach County. The role of HCSEF in the community assessment is to collect and interpret data and present the results as a part of the overall community health assessment project. The recommendations provided in this report offer guidance for the local public health system partners in Palm Beach County

BACKGROUND

The National Public Health Performance Standards (NPHPS) were developed by the Centers for Disease Control and Prevention (CDC), American Public Health Association (APHA), Association of State and Territorial Health Officials (ASTHO), National Association of County and City Health Officials (NACCHO), National Association of Local Boards of Health (NALBOH), National Network of Public Health Institutes (NNPHI) and the Public Health Foundation (PHF). This collaborative effort by these agencies is intended to improve the practice of public health and the performance of public health systems. The NPHPS assessment instruments are used to guide state and local jurisdictions in evaluating the performance of their public health systems against a set of optimal or model standards. NPHPS assessments help answer questions such as "What are the components, activities, competencies, and capacities of our public health system?" and "How well are the ten Essential Public Health Services being provided in our system?" The information obtained from conducting these assessments provides a better understanding of how the local public health system and governing entities perform.

The assessment instrument is framed around the following Ten Essential Public Health Services:

1. Monitor Health Status to Identify Community Health Problems
2. Diagnose and Investigate Health Problems and Health Hazards in the Community

3. Inform, Educate, and Empower People about Health Issues
4. Mobilize Community Partnerships to Identify and Solve Health Problems
5. Develop Policies and Plans that Support Individual and Community Health Efforts
6. Enforce Laws and Regulations that Protect Health and Ensure Safety
7. Link People to Needed Personal Health Services and Assure the Provision of Health Care when Otherwise Unavailable
8. Assure a Competent Public and Personal Health Care Workforce
9. Evaluate Effectiveness, Accessibility, and Quality of Personal and Population-Based Health Services
10. Research for New Insights and Innovative Solutions to Health Problems

For each of these Essential Services, there are model standards that describe or correspond to the quality and performance of activities conducted at the local level of the public health system. The thirty total model standards demonstrate the optimal level of performance for their respective activities.

The program is designed in the spirit of continuous quality improvement for local public health system partners, and has been identified by the CDC and other national public health entities as being a necessary foundation for public health activity.

PURPOSE

The Local Public Health System Assessment promotes continuous improvement through performance evaluation of the current local public health system. The Health Council of Southeast Florida uses this assessment as a working tool to:

- Better understand current system functioning and performance
- Identify and prioritize areas of strengths, weaknesses, and opportunities for improvement
- Articulate the value that quality improvement initiatives will bring to the public health system
- Develop an initial work plan with specific quality improvement strategies to achieve goals
- Begin taking action for achieving performance and quality improvement in one or more targeted areas
- Re-assess the progress of improvement efforts at regular intervals.

METHODOLOGY

The Local Public Health System Assessment was conducted over the course of two meetings in Palm Beach County, Florida. HCSEF facilitated the LPHSA by engaging a diverse group of community stakeholders representing the local public health system in Palm Beach County. Stakeholders were asked to evaluate the performance of their local public health system in each of the 10 Essential Public Health Services (EPHS). Each Essential Service was ultimately given a composite value, determined by aggregation of the scores given to the individual activities that contribute to each

Essential Service. These scores range from a minimum value of 0% (indicating that no activity is performed pursuant to the standards) to a maximum of 100% (meaning that all activities associated with the standards are performed at optimal levels).

On August 12, 2016, 16 local internal stakeholders - members of the Florida Department of Health in Palm Beach and the Health Care District of Palm Beach County – gathered at the Health Department to assess Essential Services 1, 2, 5, 6, and 10. On August 26, 2016, thirty local external stakeholders, including members of both the local health department and the Palm Beach Health Care District, gathered at Mounts Botanical Garden to assess Essential Services 3, 4, 7, 8, and 9. Over the course of these two meetings, the local public health system partners assessed the performance of the public health system in Palm Beach County, relative to the national standards set by the NPHPS. Activities of all public health system partners and agencies that contribute to the local public health system, including public, private, and voluntary entities, were assessed.

In each meeting for the LPHSA, HCSEF gave an overview of the Essential Public Health Services, and the purpose of completing the assessment. Attendees engaged in discussion, facilitated by the HCSEF staff, assessing the local public health system's current level of activity, in comparison to the specific performance measures detailed by each model standard. Participants rated the LPHS's performance of each model standard using a nominal scale, in which 0% is no activity and 100% is maximum activity (see Table 156). Participants' votes on these model standards were gathered using portable electronic keypads. Results, captured in real time, were displayed instantly after each vote. In the event of a tie, participants discussed the performance measure in order to reach a consensus.

The table below shows the response options participants were given.

TABLE 173: PERFORMANCE MEASURES RESPONSE OPTIONS

Optimal Activity (76-100%)	Greater than 75% of the activity described within the question is met.
Significant Activity (51-75%)	Greater than 50%, but no more than 75% of the activity described within the question is met.
Moderate Activity (26-50%)	Greater than 25%, but no more than 50% of the activity described within the question is met.
Minimal Activity (1-25%)	Greater than zero, but no more than 25% of the activity described within the question is met.
No Activity (0%)	0% or absolutely no activity.

Source: Palm Beach County Local Public Health System Assessment Report, 2016
Compiled by: Health Council of Southeast Florida, 2016

The Florida of Department of Health in Palm Beach County also chose to complete two optional questionnaires: a Priority Rating Questionnaire and an Agency Contribution Questionnaire. These tools enhance the accuracy of the assessment process. The Agency Contribution Questionnaire asks stakeholders to consider the contribution of the local health department to each Model Standard. The Priority Rating Questionnaire allows participants to prioritize the importance of each Model Standard in the community. This supplemental information enhances the assessment process and strengthens the performance improvement activities that result from it.³¹ At the conclusion of both the August 16, 2016, and the August 26, 2016, meetings, hard copies of these two questionnaires were distributed to all participants. The

³¹ National Association of County & City Health Officials (NACCHO). Local Assessment Instrument Version 3.0

results were recorded manually in the NPHPS assessment score sheets and compiled using the report tool from NACCHO/CDC. This assessment includes the aggregate data from these questionnaires.

Community health partners must understand the potential data limitations associated with this assessment process and how to appropriately interpret the assessment results to effectively evaluate and improve the local public health system. The assessment collects data based on the input of a diverse set of stakeholders, with different backgrounds, expertise, and experiences. This process of information gathering incorporates an element of subjectivity and bias. These limitations can be minimized through the use of particular assessment methods, however, the assessment methods are not fully standardized and these differences may introduce an element of measurement error. The results and recommendations should be used only for quality and performance improvement purposes. Furthermore, the assessment does not reflect the performance or priorities of any single agency or organization.

RESULTS

The Local Public Health System Assessment asks the question: “How well did the local public health system perform the ten Essential Public Health Services?” The figures below provide an overview of the system's performance in each of the Ten Essential Public Health Services, as assessed by stakeholders in Palm Beach County. The score for each Essential Service is a composite value. These scores reflect the votes of all participating stakeholders on the model standards that contribute to each Essential Service. The scores range from a minimum value of 0% (no activity is performed pursuant to the standards) to a maximum of 100% (all activities associated with the standards are performed at optimal levels). The findings accompany recommendations and opportunities provided by the CDC for the community's consideration as they move forward with health planning from a systems perspective.

The following table includes the summary scores for each of the ten essential services as well as the two optional questionnaires.

TABLE 174: OVERALL PERFORMANCE SCORES, PRIORITY RATINGS AND AGENCY CONTRIBUTION SCORES BY ESSENTIAL SERVICE

Model Standards by Essential Services	Performance Scores	Priority Rating	Agency Contribution Scores
ES 1: Monitor Health Status	62.5	8.3	75.0
ES 2: Diagnose and Investigate	94.4	9.7	100.0
ES 3: Educate/Empower	66.7	9.0	75.0
ES 4: Mobilize Partnerships	68.8	8.5	75.0
ES 5: Develop Policies/Plans	83.3	8.5	87.5
ES 6: Enforce Laws	86.3	8.7	83.3
ES 7: Link to Health Services	56.3	9.0	75.0
ES 8: Assure Workforce	49.3	8.0	62.5
ES 9: Evaluate Services	72.9	8.7	75.0
ES 10: Research/Innovations	70.8	8.0	75.0
Average Overall Score	71.1	8.6	78.3
Median Score	69.8	8.6	75.0

Compiled by: Health Council of Southeast Florida, 2016

The figure below displays the average score for each Essential Service, as well as the overall average assessment score across all ten Essential Services. The black bars indicate the range of performance score responses within each Essential Service.

FIGURE 10: SUMMARY OF AVERAGE ESSENTIAL SERVICE PERFORMANCE SCORES

Source: Palm Beach County Local Public Health System Assessment Report, 2016
 Compiled by: Health Council of Southeast Florida, 2016

As seen above, one of the Ten Essential Public Health Services (EPHS) was given a performance score below 50%, indicating a self-assessment of moderate or lower performance when compared to the standards. This low score for Essential Public Health Service 8 (Assure Workforce) indicates there may be opportunities within the Palm Beach County public health system to better assure a competent public and personal health care workforce.

While these scores provide an immediate sense of the greatest strengths and weakness of the Palm Beach County public health system, caution should be exercised when reviewing them. A low performance score may not necessarily indicate that improvement is warranted, nor does a high score indicate that there is no need for improvement. These scores are provided as guidelines. Stakeholders and partners should review and discuss these scores to effectively identify strategies for improvement.

PERFORMANCE ASSESSMENT INSTRUMENT RESULTS

The following section contains detailed information on the self-assessed performance ratings of each Essential Service. The collective scores for the model standards under each Essential Service are provided, as are the strengths and opportunities and recommendations for improvement within the system, as described by stakeholders during the assessment process.

Essential Public Health Service 1

Monitor Health Status to Identify Community Health Problems

The Local Public Health System Strengths in this area were:

- Partners seek out CHA as a reference document when pursuing grants or other funding
- Active use of social media to relay information to public
- Surveillance and agencies gathering data across the county
 - County efficiently collects and reports data to appropriate agencies

Overall, according to the LPHSA, the community meets this standard significantly, but indicated the following areas as opportunities to improve.

- Ensure that all community members and stakeholders are aware of the CHA and CHIP
 - Address CHA and CHIP at interagency meetings
- Provide public access to CHA and CHIP through a public website
- Work to gather and provide more detailed, lower-level data (i.e. census tract)
- Share services data with individuals and agencies within networks
- Ensure that collected data is entered in a timely manner
 - Address manpower and prioritization issues surrounding data collection and processing

The following table displays the scores for each performance measure under the three model standards for Public Health Essential Service 1.

TABLE 175: SUMMARY OF PERFORMANCE MEASURES PUBLIC HEALTH ESSENTIAL SERVICE 1

ESSENTIAL SERVICE 1: Monitor Health Status to Identify Community Health Problems		
1.1	Model Standard: Population-Based Community Health Assessment (CHA) <i>At what level does the local public health system:</i>	
1.1.1	Conduct regular community health assessments?	75
1.1.2	Continuously update the community health assessment with current information?	50
1.1.3	Promote the use of the community health assessment among community members and partners?	50
1.2	Model Standard: Current Technology to Manage and Communicate Population Health Data <i>At what level does the local public health system:</i>	
1.2.1	Use the best available technology and methods to display data on the public's health?	75
1.2.2	Analyze health data, including geographic information, to see where health problems exist?	75
1.2.3	Use computer software to create charts, graphs, and maps to display complex public health data (trends over time, sub-population analyses, etc.)?	50
1.3	Model Standard: Maintenance of Population Health Registries <i>At what level does the local public health system:</i>	
1.3.1	Collect data on specific health concerns to provide the data to population health registries in a timely manner, consistent with current standards?	50
1.3.2	Use information from population health registries in community health assessments or other analyses?	75

Essential Public Health Service 2

Diagnose and Investigate Health Problems and Health Hazards

The Local Public Health System Strengths in this area were:

- High level of cooperation by all partners involved
- Many built-in redundancies for protection
- Effective use of newsletters and electronic reporting
- Creation of first electronic county manual
 - Used as a model by other communities
 - Very user-friendly
 - Includes emergency contact information at multiple levels
- Detailed county emergency plans for various emergency and disaster scenarios
 - All sectors are addressed in emergency plans
 - Many practice drills are conducted, involving multiple agencies
 - Yearly trainings enforce steps and knowledge

Overall, according to the LPHSA, the community does an optimal job meeting this standard, but indicated the following areas as opportunities to improve.

- Improve efficiency of data reporting by all partners
- Reach out and involve more agencies as partners
- Make emergency manual available to the greater community for use and improved coordination
- Facilitate an interagency meeting to discuss improvements

The table below displays the scores for each performance measure under the three model standards for Public Health Essential Service 2.

TABLE 176: SUMMARY OF PERFORMANCE MEASURES PUBLIC HEALTH ESSENTIAL SERVICE 2

ESSENTIAL SERVICE 2: Diagnose and Investigate Health Problems and Health Hazards		
2.1	Model Standard: Identification and Surveillance of Health Threats <i>At what level does the local public health system:</i>	
2.1.1	Participate in a comprehensive surveillance system with national, state and local partners to identify, monitor, share information, and understand emerging health problems and threats?	100
2.1.2	Provide and collect timely and complete information on reportable diseases and potential disasters, emergencies and emerging threats (natural and manmade)?	100
2.1.3	Assure that the best available resources are used to support surveillance systems and activities, including information technology, communication systems, and professional expertise?	75
2.2	Model Standard: Investigation and Response to Public Health Threats and Emergencies <i>At what level does the local public health system:</i>	
2.2.1	Maintain written instructions on how to handle communicable disease outbreaks and toxic exposure incidents, including details about case finding, contact tracing, and source identification and containment?	100
2.2.2	Develop written rules to follow in the immediate investigation of public health threats and emergencies, including natural and intentional disasters?	75
2.2.3	Designate a jurisdictional Emergency Response Coordinator?	100
2.2.4	Prepare to rapidly respond to public health emergencies according to emergency operations coordination guidelines?	100
2.2.5	Identify personnel with the technical expertise to rapidly respond to possible biological, chemical, or and nuclear public health emergencies?	75
2.2.6	Evaluate incidents for effectiveness and opportunities for improvement?	100
2.3	Model Standard: Laboratory Support for Investigation of Health Threats <i>At what level does the local public health system:</i>	
2.3.1	Have ready access to laboratories that can meet routine public health needs for finding out what health problems are occurring?	100
2.3.2	Maintain constant (24/7) access to laboratories that can meet public health needs during emergencies, threats, and other hazards?	100
2.3.3	Use only licensed or credentialed laboratories?	100
2.3.4	Maintain a written list of rules related to laboratories, for handling samples (collecting, labeling, storing, transporting, and delivering), for determining who is in charge of the samples at what point, and for reporting the results?	100

Essential Public Health Service 3

Inform, Educate, and Empower People about Health Issues

The Local Public Health System Strengths in this area included:

- Continuous development of new and effective ways to disseminate public health messages
- Broad-reaching health education classes by partner agencies
 - Closing the Gap program increases access to health education classes
- Only county with a nurse in every school
 - High return-to-class rate
 - Extensive interaction with students, staff, and parents
- County and Department of Health all have media contacts or spokespersons
- School district does a commendable job of communicating emergency information
- Trainings available for numerous sectors of the population, through a variety of agencies

Overall, according to the LPHSA, the community significantly meets this standard, but indicated the following areas as opportunities to improve:

- Continue to build a comprehensive understanding of the needs of all sectors of the community and how to best communicate with and provide information to them
- Improve usage of social media and technology as a tool for distributing public health information
- Work with tourism industry to ensure correct and consistent messaging

The table below displays the scores for each performance measure under the 3 model standards for Public Health Essential Service 3.

TABLE 177: SUMMARY OF PERFORMANCE MEASURES PUBLIC HEALTH ESSENTIAL SERVICE 3

ESSENTIAL SERVICE 3: Inform, Educate, and Empower People about Health Issues		
3.1	Model Standard: Health Education and Promotion <i>At what level does the local public health system:</i>	
3.1.1	Provide policymakers, stakeholders, and the public with ongoing analyses of community health status and related recommendations for health promotion policies?	50
3.1.2	Coordinate health promotion and health education activities to reach individual, interpersonal, community, and societal levels?	75
3.1.3	Engage the community throughout the process of setting priorities, developing plans and implementing health education and health promotion activities?	50
3.2	Model Standard: Health Communication <i>At what level does the local public health system:</i>	
3.2.1	Develop health communication plans for relating to media and the public and for sharing information among LPHS organizations?	75
3.2.2	Use relationships with different media providers (e.g. print, radio, television, and the internet) to share health information, matching the message with the target audience?	75
3.2.3	Identify and train spokespersons on public health issues?	75
3.3	Model Standard: Risk Communication <i>At what level does the local public health system:</i>	
3.3.1	Develop an emergency communications plan for each stage of an emergency to allow for the effective dissemination of information?	75
3.3.2	Make sure resources are available for a rapid emergency communication response?	75
3.3.3	Provide risk communication training for employees and volunteers?	50

Essential Public Health Service 4

Mobilize Community Partnerships to Identify and Solve Health Problems

The Local Public Health System Strengths in this area were:

- Improved focus on mental and behavioral health
- Consistent improvement on community participation
- Good sources of information and planning resources
 - Birth to 22: Youth Master Plan
- Continual improvement of partner and interagency collaboration
- Prioritization by Health Care District of determining best ways to effectively reach out and work with all facets of the community

Overall, according to the LPHSA, the community significantly meets this standard, but indicated the following areas as opportunities to improve:

- Work to create a central resource for community members to “fact check” and find credible health information
- Simplify information resources to enable all individuals to easily find the information they need
- Encourage organizations to work together to:
 - Improve communication and outreach efforts
 - Avoid unnecessary duplication of efforts and services
 - Maximize efficiency

The following table displays the scores for each performance measure under the two model standards for Public Health Essential Service 4.

TABLE 178: SUMMARY OF PERFORMANCE MEASURES PUBLIC HEALTH ESSENTIAL SERVICE 4

ESSENTIAL SERVICE 4: Mobilize Community Partnerships to Identify and Solve Health Problems		
4.1	Model Standard: Constituency Development <i>At what level does the local public health system:</i>	
4.1.1	Maintain a complete and current directory of community organizations?	75
4.1.2	Follow an established process for identifying key constituents related to overall public health interests and particular health concerns?	50
4.1.3	Encourage constituents to participate in activities to improve community health?	75
4.1.4	Create forums for communication of public health issues?	50
4.2	Model Standard: Community Partnerships <i>At what level does the local public health system:</i>	
4.2.1	Establish community partnerships and strategic alliances to provide a comprehensive approach to improving health in the community?	75
4.2.2	Establish a broad-based community health improvement committee?	75
4.2.3	Assess how well community partnerships and strategic alliances are working to improve community health?	75

Essential Public Health Service 5

Develop Policies and Plans that Support Individual and Community Health Efforts

The Local Public Health System Strengths in this area were:

- Excellent support from Board of County Commissioners and Palm Beach County
 - Buildings and cars supplied for use by the Department of Health
- Partnership with Palm Beach County School District to influence changes to state law
- Collaboration with numerous individuals and agencies, including funding partners
 - Workgroup sessions held multiple times a year
- Effective system for identifying a broad spectrum of community representatives
- Annual public review of CHIP, including a review of objectives every two years
- An established, comprehensive emergency response plan
 - Tested on a regular basis
 - Drills conducted several times a year
 - Includes many agencies as partners

Overall, according to the LPHSA, the community does an optimal job meeting this standard, but indicated the following areas as opportunities to improve:

- Develop improved intra- and interagency collaboration
- Ensure that policies in all agencies are reviewed regularly and updated as necessary

The following table displays the scores for each performance measure under the four model standards for Public Health Essential Service 5.

TABLE 179: SUMMARY OF PERFORMANCE MEASURES PUBLIC HEALTH ESSENTIAL SERVICE 5

ESSENTIAL SERVICE 5: Develop Policies and Plans that Support Individual and Community Health Efforts		
5.1	Model Standard: Governmental Presence at the Local Level <i>At what level does the local public health system:</i>	
5.1.1	Support the work of a local health department dedicated to the public health to make sure the essential public health services are provided?	100
5.1.2	See that the local health department is accredited through the national voluntary accreditation program?	100
5.1.3	Assure that the local health department has enough resources to do its part in providing essential public health services?	50
5.2	Model Standard: Public Health Policy Development <i>At what level does the local public health system:</i>	
5.2.1	Contribute to public health policies by engaging in activities that inform the policy development process?	75
5.2.2	Alert policymakers and the community of the possible public health impacts (both intended and unintended) from current and/or proposed policies?	75
5.2.3	Review existing policies at least every three to five years?	75
5.3	Model Standard: Community Health Improvement Process and Strategic Planning <i>At what level does the local public health system:</i>	
5.3.1	Establish a community health improvement process, with broad-based diverse participation, that uses information from both the community health assessment and the perceptions of community members?	75
5.3.2	Develop strategies to achieve community health improvement objectives, including a description of organizations accountable for specific steps?	75
5.3.3	Connect organizational strategic plans with the Community Health Improvement Plan?	75
5.4	Model Standard: Plan for Public Health Emergencies <i>At what level does the local public health system:</i>	
5.4.1	Support a workgroup to develop and maintain preparedness and response plans?	100
5.4.2	Develop a plan that defines when it would be used, who would do what tasks, what standard operating procedures would be put in place, and what alert and evacuation protocols would be followed?	100
5.4.3	Test the plan through regular drills and revise the plan as needed, at least every two years?	100

Essential Public Health Service 6

Enforce Laws and Regulations that Protect Health and Ensure Safety

The Local Public Health System Strengths in this area were:

- Numerous attorneys either in employ or who volunteer their time and services
- Department of Health is proactive about addressing public health issues (such as TB and water quality)
 - Providing educational information on issues such as childcare, septic tanks, swimming safety, etc.
- Annual review of existing laws and regulations
- Continual education of public health partners
- Ongoing efforts ensure public health partners' compliance with laws and regulations

Overall, according to the LPHSA, the community did an optimal job at meeting this standard, but indicated the following areas as opportunities to improve:

- Enhance the walkability of various parts of the community
- Provide more educational outreach, especially within the local public health system

The table below displays the scores for each performance measure under the three model standards for Public Health Essential Service 6.

TABLE 180: SUMMARY OF PERFORMANCE MEASURES PUBLIC HEALTH ESSENTIAL SERVICE 6

ESSENTIAL SERVICE 6: Enforce Laws and Regulations that Protect Health and Ensure Safety		
6.1	Model Standard: Review and Evaluation of Laws, Regulations, and Ordinances <i>At what level does the local public health system:</i>	
6.1.1	Identify public health issues that can be addressed through laws, regulations, or ordinances?	100
6.1.2	Stay up-to-date with current laws, regulations, and ordinances that prevent, promote, or protect public health on the federal, state, and local levels?	75
6.1.3	Review existing public health laws, regulations, and ordinances at least once every five years?	100
6.1.4	Have access to legal counsel for technical assistance when reviewing laws, regulations, or ordinances?	100
6.2	Model Standard: Involvement in the Improvement of Laws, Regulations, and Ordinances <i>At what level does the local public health system:</i>	
6.2.1	Identify local public health issues that are inadequately addressed in existing laws, regulations, and ordinances?	75
6.2.2	Participate in changing existing laws, regulations, and ordinances, and/or creating new laws, regulations, and ordinances to protect and promote the public health?	75
6.2.3	Provide technical assistance in drafting the language for proposed changes or new laws, regulations, and ordinances?	75
6.3	Model Standard: Enforcement of Laws, Regulations, and Ordinances <i>At what level does the local public health system:</i>	
6.3.1	Identify organizations that have the authority to enforce public health laws, regulations, and ordinances?	100
6.3.2	Assure that a local health department (or other governmental public health entity) has the authority to act in public health emergencies?	100
6.3.3	Assure that all enforcement activities related to public health codes are done within the law?	100
6.3.4	Educate individuals and organizations about relevant laws, regulations, and ordinances?	75
6.3.5	Evaluate how well local organizations comply with public health laws?	75

Essential Public Health Service 7

Link People to Needed Personal Health Services and Assure the Provision of Health Care when Otherwise Unavailable

The Local Public Health System Strengths in this area were:

- Expansion of Safe Schools homeless program
- Progress is being made with regards to mental health and availability of providers
- Advancements being made in efforts to best link patients to services
 - Working with county food pantries to share information on food assistance benefits
 - Dispersion of KidCare enrollment packets to schools; packets provided to each child
 - Increased Insurance Navigator staff at hospitals to assist in patient enrollment

Overall, according to the LPHSA, the community significantly met this standard and indicated the following areas as opportunities to improve:

- Continue efforts to best link patients with the appropriate care
- Educate community on the importance of preventative medicine
- Work to determine the best way to reach and engage the community on health issues
 - Health fairs, family fun day
 - Incentivize people to be healthy
 - More engagement about home-based care
- Promote technology-centered messaging, following technology trends (Google, YouTube, etc.)
- Provide education about costs and alternatives of Emergency Room utilization

The table below displays the scores for each performance measure under the two model standards for Public Health Essential Service 7.

TABLE 181: SUMMARY OF PERFORMANCE MEASURES PUBLIC HEALTH ESSENTIAL SERVICE 7

ESSENTIAL SERVICE 7: Link People to Needed Personal Health Services and Assure the Provision of Health Care when Otherwise Unavailable		
7.1	Model Standard: Identification of Personal Health Service Needs of Populations <i>At what level does the local public health system:</i>	
7.1.1	Identify groups of people in the community who have trouble accessing or connecting to personal health services?	50
7.1.2	Identify all personal health service needs and unmet needs throughout the community?	50
7.1.3	Defines partner roles and responsibilities to respond to the unmet needs of the community?	50
7.1.4	Understand the reasons that people do not get the care they need?	75
7.2	Model Standard: Assuring the Linkage of People to Personal Health Services <i>At what level does the local public health system:</i>	
7.2.1	Connect (or link) people to organizations that can provide the personal health services they may need?	50
7.2.2	Help people access personal health services, in a way that takes into account the unique needs of different populations?	50
7.2.3	Help people sign up for public benefits that are available to them (e.g., Medicaid or medical and prescription assistance programs)?	75
7.2.4	Coordinate the delivery of personal health and social services so that everyone has access to the care they need?	50

Essential Public Health Service 8

Assure a Competent Public and Personal Health Care Workforce

The Local Public Health System Strengths in this area were:

- Internal means of tracking public health jobs, within agencies
- Free public health seminars are held monthly through the Department of Health
- Some agencies mandate cultural competency training for staff
- Department of Health has a trainer on staff
- Palm Beach Medical Society Project Access is working to provide competent community health workers in many aspects of care
- Tuition reimbursement is available (for those that qualify)

Overall, according to the LPHSA, the community moderately met this standard, and indicated the following areas as opportunities to improve:

- Incentivize teaching in the nursing field in order to increase the low number of teachers
- Expand available means of in-person or on-site local public health training
- Provide and ensure participation in public health-specific cultural competency training
- Develop incentives for participation in training such as:
 - Tuition reimbursement
 - CEUs or CMEs

The following table displays the scores for each performance measure under the four model standards for Public Health Essential Service 8.

TABLE 182: SUMMARY OF PERFORMANCE MEASURES PUBLIC HEALTH ESSENTIAL SERVICE 8

ESSENTIAL SERVICE 8: Assure a Competent Public and Personal Health Care Workforce		
8.1	Model Standard: Workforce Assessment, Planning, and Development <i>At what level does the local public health system:</i>	
8.1.1	Set up a process and a schedule to track the numbers and types of LPHS jobs and the knowledge, skills, and abilities that they require whether those jobs are in the public or private sector?	25
8.1.2	Review the information from the workforce assessment and use it to find and address gaps in the local public health workforce?	25
8.1.3	Provide information from the workforce assessment to other community organizations and groups, including governing bodies and public and private agencies, for use in their organizational planning?	25
8.2	Model Standard: Public Health Workforce Standards <i>At what level does the local public health system:</i>	
8.2.1	Make sure that all members of the public health workforce have the required certificates, licenses, and education needed to fulfill their job duties and meet the law?	75
8.2.2	Develop and maintain job standards and position descriptions based in the core knowledge, skills, and abilities needed to provide the essential public health services?	50
8.2.3	Base the hiring and performance review of members of the public health workforce in public health competencies?	50
8.3	Model Standard: Life-Long Learning through Continuing Education, Training, and Mentoring <i>At what level does the local public health system:</i>	
8.3.1	Identify education and training needs and encourage the workforce to participate in available education and training?	50
8.3.2	Provide ways for workers to develop core skills related to essential public health services?	50
8.3.3	Develop incentives for workforce training, such as tuition reimbursement, time off for class, and pay increases?	25
8.3.4	Create and support collaborations between organizations within the public health system for training and education?	50
8.3.5	Continually train the public health workforce to deliver services in a cultural competent manner and understand social determinants of health?	50
8.4	Model Standard: Public Health Leadership Development <i>At what level does the local public health system:</i>	
8.4.1	Provide access to formal and informal leadership development opportunities for employees at all organizational levels?	50
8.4.2	Create a shared vision of community health and the public health system, welcoming all leaders and community members to work together?	75
8.4.3	Ensure that organizations and individuals have opportunities to provide leadership in areas where they have knowledge, skills, or access to resources?	75
8.4.4	Provide opportunities for the development of leaders representative of the diversity within the community?	75

Essential Public Health Service 9

Evaluate Effectiveness, Accessibility, and Quality of Personal and Population-Based Health Services

The Local Public Health System Strengths in this area were:

- Regular reevaluations conducted based on priorities and goals of previous CHIP
- Monthly community assessments conducted by the Department of Health
- Numerous quality population-based services providing intervention and outreach for health issues
 - Black infant mortality program
 - Department of Health Center for Equity
 - Youth Community Conversations
- Florida Institute for Health Innovation meets quarterly for collaboration
- Health Resources and Services Administration shows many organizations performing well

Overall, according to the LPHSA, the community significantly met this standard and indicated the following areas as opportunities to improve:

- While organizations perform well, there is room for improvement and collaboration, sharing of best practices
 - Ensure that agencies work together in such a way as to avoid overlap and inefficiencies that can result from redundancy
- Develop a forum for local public health agencies to share best practices and map strengths
- Ensure that all organizations are being used to their full potential for health prevention, education and outreach (i.e. remember that there is more to the YMCA than just basketball)

The table below displays the scores for each performance measure under the three model standards for Public Health Essential Service 9.

TABLE 183: SUMMARY OF PERFORMANCE MEASURES PUBLIC HEALTH ESSENTIAL SERVICE 9

ESSENTIAL SERVICE 9: Evaluate Effectiveness, Accessibility, and Quality of Personal and Population-Based Health Services		
9.1	Model Standard: Evaluation of Population-Based Health Services <i>At what level does the local public health system:</i>	
9.1.1	Evaluate how well population-based health services are working, including whether the goals that were set for programs were achieved?	50
9.1.2	Assess whether community members, including those with a higher risk of having a health problem, are satisfied with the approaches to preventing disease, illness, and injury?	50
9.1.3	Identify gaps in the provision of population-based health services?	75
9.1.4	Use evaluation findings to improve plans and services?	75
9.2	Model Standard: Evaluation of Personal Health Services <i>At what level does the local public health system:</i>	
9.2.1	Evaluate the accessibility, quality, and effectiveness of personal health services?	75
9.2.2	Compare the quality of personal health services to established guidelines?	75
9.2.3	Measure satisfaction with personal health services?	75
9.2.4	Use technology, like the internet or electronic health records, to improve quality of care?	75
9.2.5	Use evaluation findings to improve services and program delivery?	75
9.3	Model Standard: Evaluation of the Local Public Health System <i>At what level does the local public health system:</i>	
9.3.1	Identify all public, private, and voluntary organizations that provide essential public health services?	75
9.3.2	Evaluate how well LPHS activities meet the needs of the community at least every five years, using guidelines that describe a model LPHS and involving all entities contributing to essential public health services?	100
9.3.3	Assess how well the organizations in the LPHS are communicating, connecting, and coordinating services?	75
9.3.4	Use results from the evaluation process to improve the LPHS?	75

Essential Public Health Service 10

Research for New Insights and Innovative Solutions to Health Problems

The Local Public Health System Strengths in this area were:

- Abundant research studies conducted by numerous partners
 - Hospitals
 - Department of Health and its residents
- Students from nearby universities partner with the Department of Health to conduct research and for projects and capstones
- Department of Health is known as a research- and academic-oriented health department
- Free flow of information between local public health agencies
- Many local colleges and universities are active participants in the local public health community and with the Department of Health
 - Professors volunteer their time and assist in managing and analyzing datasets at the Department of Health

Overall, according to the LPHSA, the community significantly met this standard and indicated the following areas as opportunities to improve:

- Allocate time and resources for employees to dedicate specifically to conducting research
- Develop a more systematic approach to partnering with local colleges and universities

The following table displays the scores for each performance measure under the three model standards for Public Health Essential Service 10.

TABLE 184: SUMMARY OF PERFORMANCE MEASURES PUBLIC HEALTH ESSENTIAL SERVICE 10

ESSENTIAL SERVICE 10: Research for New Insights and Innovative Solutions to Health Problems		
10.1	Model Standard: Fostering Innovation <i>At what level does the local public health system:</i>	
10.1.1	Provide staff with the time and resources to pilot test or conduct studies to test new solutions to public health problems and see how well they actually work?	75
10.1.2	Suggest ideas about what currently needs to be studied in public health to organizations that do research?	75
10.1.3	Keep up with information from other agencies and organizations at the local, state, and national levels about current best practices in public health?	75
10.1.4	Encourage community participation in research, including deciding what will be studied, conducting research, and in sharing results?	75
10.2	Model Standard: Linkage with Institutions of Higher Learning and/or Research <i>At what level does the local public health system:</i>	
10.2.1	Develop relationships with colleges, universities, or other research organizations, with a free flow of information, to create formal and informal arrangements to work together?	75
10.2.2	Partner with colleges, universities, or other research organizations to do public health research, including community-based participatory research?	75
10.2.3	Encourage colleges, universities, and other research organizations to work together with LPHS organizations to develop projects, including field training and continuing education?	75
10.3	Model Standard: Capacity to Initiate or Participate in Research <i>At what level does the local public health system:</i>	
10.3.1	Collaborate with researchers who offer the knowledge and skills to design and conduct health-related studies?	75
10.3.2	Support research with the necessary infrastructure and resources, including facilities, equipment, databases, information technology, funding, and other resources?	50
10.3.3	Share findings with public health colleagues and the community broadly, through journals, websites, community meetings, etc.?	75
10.3.4	Evaluate public health systems research efforts throughout all stages of work from planning to impact on local public health practice?	50

PRIORITY RATING QUESTIONNAIRE

As a supplement to the performance scoring, the local public health partners in Palm Beach County completed a Priority Rating Questionnaire. This questionnaire allows participants to provide their individual priority rankings for each Model Standard. At the conclusion of the August 12, 2016, and the August 26, 2016, meetings, hard copies of the questionnaire were administrated to all attendees.

The four quadrants in the table below are determined by the resultant aggregate priority ratings of the Model Standards for the Essential Services and how each compares with its corresponding performance score. The results aid in pinpointing recommended areas of high priority for improvement within the local public health system.

TABLE 185: ESSENTIAL SERVICE MODEL STANDARD PRIORITY RANKING

Quadrant A	(High Priority and Low Performance) – These activities may need increased attention.
Quadrant B	(High Priority and High Performance) – These activities are being done well, and it is important to maintain efforts.
Quadrant C	(Low Priority and High Performance) – These activities are being done well, consideration may be given to reducing effort in these areas.
Quadrant D	(Low Priority and Low Performance) – These activities could be improved, but are of low priority. They may need little or no attention at this time.

Compiled by: Health Council of Southeast Florida, 2016

The table below displays the priority rating and the performance score given to each Essential Service's Model Standard.

TABLE 186: SUMMARY OF PRIORITY RATING AND PERFORMANCE SCORES BY MODEL STANDARD

Quadrant	Model Standard	Performance Score (%)	Priority Rating
Quadrant A	9.1 Evaluation of Population Health	62.5	9
Quadrant A	7.2 Assure Linkage	56.3	9
Quadrant A	7.1 Personal Health Services Needs	56.3	9
Quadrant A	3.3 Risk Communication	66.7	9
Quadrant A	3.1 Health Education/Promotion	58.3	9
Quadrant A	1.1 Community Health Assessment	58.3	9
Quadrant B	9.3 Evaluation of LPHS	81.3	9
Quadrant B	6.2 Improve Laws	75.0	9
Quadrant B	6.1 Review Laws	93.8	9
Quadrant B	5.4 Emergency Plan	100.0	9
Quadrant B	5.3 CHIP/Strategic Planning	75.0	9
Quadrant B	4.2 Community Partnerships	75.0	9
Quadrant B	3.2 Health Communication	75.0	9
Quadrant B	2.3 Laboratories	100.0	9
Quadrant B	2.2 Emergency Response	91.7	10
Quadrant B	2.1 Identification/Surveillance	91.7	10
Quadrant C	10.2 Academic Linkages	75.0	8
Quadrant C	10.1 Foster Innovation	75.0	8
Quadrant C	9.2 Evaluation of Personal Health	75.0	8
Quadrant C	6.3 Enforce Laws	90.0	8
Quadrant C	5.2 Policy Development	75.0	8
Quadrant C	5.1 Governmental Presence	83.3	8
Quadrant D	10.3 Research Capacity	62.5	8
Quadrant D	8.4 Leadership Development	68.8	8
Quadrant D	8.3 Continuing Education	45.0	8
Quadrant D	8.2 Workforce Standards	58.3	8
Quadrant D	8.1 Workforce Assessment	25.0	8
Quadrant D	4.1 Constituency Development	62.5	8
Quadrant D	1.3 Registries	62.5	8
Quadrant D	1.2 Current Technology	66.7	8

Source: Palm Beach County Local Public Health System Assessment Report, 2016
Compiled by: Health Council of Southeast Florida, 2016

The figure below displays the 30 model standards by the priority-to-performance quadrant classification determined by this assessment process.

The green quadrant on the top right includes model standards given high priority and a high performance score. Palm Beach County's local public health system performs these 10 activities well, and it is important that they maintain these efforts. Palm Beach County's LPHSA ranked all model standards of Essential Service 2 (Monitor Health Status) in this category.

The blue quadrant contains model standards identified as having low priority and high performance. These are 6 areas performing well within the county, but to which consideration may be given to reduce effort, as they are ranked with low priority in the Local Public Health System Assessment.

The pink quadrant on the bottom left contains activities with low priority and low performance. This assessment determined that there is room for improvement in these 8 areas, but they do not require immediate or substantial attention at present, due to the low priority these areas were assigned during the LPHSA. Palm Beach County's LPHSA ranked all model standards of Essential Service 8 (Assure Workforce) in this category.

The yellow quadrant on the top left contains 6 activities that the LPHSA indicated need increased attention. These 6 areas were ranked with low performance and high priority. This quadrant includes all model standards from Essential Service 7 (Link to Health Services).

FIGURE 11: PRIORITY AND PERFORMANCE QUADRANT

LOCAL HEALTH DEPARTMENT QUESTIONNAIRE

In addition to the Priority Rating Questionnaire, the local public health partners in Palm Beach County chose to complete the Local Health Department (LHD) Contribution assessment. This supplemental questionnaire allows participants to provide their individual assessment of the contribution of the local health department with respect to each Model Standard. At the conclusion of the August 12, 2016, and the August 26, 2016, meetings, hardcopy questionnaires were administered to all participants. The four quadrants in the table below are based on the performance rating of each Essential Service or Model Standard and how it compares with the respective contribution of the local health department. The results provide recommended areas for attention to improve the local public health system.

TABLE 187: ESSENTIAL SERVICE MODEL STANDARD AGENCY CONTRIBUTION RANKING

Quadrant A	(High Agency Contribution and Low Performance) – These activities may need increased attention.
Quadrant B	(High Agency Contribution and High Performance) – These activities are being done well, and it is important to maintain efforts.
Quadrant C	(Low Agency Contribution and High Performance) – These activities are being done well, consideration may be given to reducing effort in these areas.
Quadrant D	(Low Agency Contribution and Low Performance) – These activities could be improved, but are of low priority. They may need little or no attention at this time.

Quadrant D	7.1 Personal Health Services Needs	75.0	56.3
Quadrant D	4.1 Constituency Development	75.0	62.5
Quadrant D	3.3 Risk Communication	75.0	66.7
Quadrant D	3.1 Health Education/Promotion	75.0	58.3
Quadrant D	1.3 Registries	75.0	62.5
Quadrant D	1.2 Current Technology	75.0	66.7
Quadrant D	1.1 Community Health Assessment	75.0	58.3

Source: Palm Beach County Local Public Health System Assessment Report, 2016

Compiled by: Health Council of Southeast Florida, 2016

The following figure reflects the 30 model standards by quadrant ranking.

The green quadrant on the top right contains model standards that were ranked as having a high local health department contribution and a high performance score. Palm Beach County's local public health system performs these activities well, with a high level of support from the local health department. It is important to maintain these efforts. Palm Beach County's LPHSA indicated that all model standards under Essential Service 2 (Diagnose and Investigate) fell into this quadrant.

The blue quadrant contains model standards identified as having low local health department contribution and high performance. These activities are being performed well throughout the county, with efforts from many community partners, including the health department.

The pink quadrant on the bottom left contains activities with low local health department contribution and a low performance score. There is room for improvement in these areas at the local health department and throughout the local public health system. Palm Beach County's LPHSA indicated that all model standards of Essential Services 1 (Monitor Health Status), 7 (Link to Health Services), and 8 (Assure Workforce) fell into this category.

The yellow quadrant is reserved for activities that may need increased attention and support from outside the local health department. These are areas of low performance and high local health department contribution. No model standards ranked in this category in Palm Beach County's Local Public Health System Assessment.

FIGURE 12: LOCAL HEALTH DEPARTMENT CONTRIBUTION AND PERFORMANCE QUADRANTS

Source: Palm Beach County Local Public Health System Assessment Report, 2016

Compiled by: Health Council of Southeast Florida, 2016

CONCLUSION

The results of this Local Public Health System Assessment are the product of an investment of time and invaluable insight by the participants and make up a critical component of the county's health assessment and performance improvement plan process. This report highlights assets and strengths of the Palm Beach County public health system that local agencies and stakeholders should strive to capitalize and build on. In addition, it identifies areas of weakness and concern in the local public health system, and pinpoints opportunities for improvement. The assessment is intended to help guide the planning efforts of local health and human service agencies in Palm Beach County. Drawing upon the results of this assessment, public health leaders can partner to institute changes within their local public health system to elevate available health services.

COMMUNITY THEMES AND STRENGTHS ASSESSMENT

COMMUNITY HEALTH ASSESSMENT FOCUS GROUPS

The Health Council of Southeast Florida conducted focus groups during September, 2016 through November, 2016 to obtain insight and knowledge from the residents of Palm Beach County. The goal of each focus group discussion was to understand the experiences and unique needs of the community and its residents with an emphasis on health issues and health services. The following section outlines the focus group methodology and provides a summary of the common themes identified throughout the discussions.

METHODOLOGY

The Health Council of Southeast Florida (HCSEF) has developed and fine-tuned protocols and questions for community focus groups. Local community organizations aided in the recruitment of participants and provided a location for the discussion. The following segments of the population were recruited: individuals residing in the Glades communities, individuals over 65 years of age, the youth, the homeless, low-income populations, individuals with primary languages other than English (Haitian-Creole and Spanish) and individuals with disabilities.

Prior to starting each focus group, participants were given a demographic questionnaire to complete. Assistance was provided to individuals requiring it. In order to incentivize the process, HCSEF provided refreshments and gift cards to all individuals that participated.

Each of the fourteen focus groups had between 8 and 22 participants. The groups had concrete questions and probes to utilize if they were needed to further the discussion and lasted approximately 60 to 90 minutes. The participants were assured that no names would be included in the summarization of answers. Only common themes expressed by participants from across different focus groups were included in this report. Thus not everything said in the groups were included in the summary.

RESULTS

The following tables depict the information collected from the demographic questionnaires.

TABLE 189: SITE, DATE, TIME AND NUMBER OF PARTICIPANTS IN FOCUS GROUPS

Site	Date	Time	# of Participants

No Response	12	6%

Fourteen focus groups were conducted with a total of 197 participants in four different languages: English, Haitian-Creole, Spanish, and American Sign Language. Twelve questions were asked to focus group participants beginning with questions related to overall quality of life in the community. In addition, probes were utilized to clarify responses and glean additional information. The following information are the common themes that emerged during the focus groups with relation to the community, health services and the health care system.

Quality of Life

- A majority of residents feel safe
 - Some areas regarded as unsafe or avoided (drugs, crimes and prostitution)
- Good place to raise children and grow old
 - Many recreational areas throughout county
 - Services and activities available for children and elderly

Key Health Issues

- Diabetes
- Mental health
 - Stress, anxiety, trauma and depression
- Substance abuse
 - Heroin and synthetic drugs
 - Alcohol abuse
- Heart disease and hypertension
- Obesity
- Cancer
- Asthma/COPD
 - Especially in the Glades communities

Causes of Health Issues

- Lack of knowledge and education regarding the existing community services and programs
- Lack of health education
 - Exercise
 - Healthy cooking and nutrition
 - Understanding health coverage and navigating the health care system
- Lack of access to affordable health coverage and services
 - Mental health and oral health services

Barriers to Care

- Lack of continuation of care and communication among health care providers
 - Shortage of providers accepting specific insurance coverages, especially specialists
- Long wait times
- Transportation
- Affordability
 - Health insurance

- Healthy, nutritious food
- Language barriers

Community Strengths/Assets

- Safety Nets
 - Department of Health
 - Health Care District
 - Hospitals, urgent care clinics/facilities
 - Federally Qualified Health Centers
- Community parks, walking and bike trails
- Resources for families
 - Senior centers
 - Youth centers and clubs
- Community health fairs

Health Services Needed

- Specialists
 - Mental health and oral health providers
- Broader safety net coverage
- Education
 - Healthy cooking, nutrition
 - Healthy lifestyles
 - Navigators to help understand the health care system
- Affordable health care coverage
- Interpreters available at physician offices, clinics, hospitals, pharmacies

Opportunities to Note

- Increase marketing and outreach of existing services currently available
- Community policing
- Improve physician communication
- Increase health education
 - Preventative care
- Increase access to physicians
 - Specialists
 - Extended health service hours
 - Shortage in rural areas
- Free or low-cost health coverage

COMMUNITY HEALTH ASSESSMENT KEY INFORMANT INTERVIEWS

The Health Council of Southeast Florida conducted 21 interviews with key community stakeholders and members in 2016. The purpose was to collect first-hand information from a wide range of community leaders who have expertise about the county, its residents and its resources. The individuals selected for the interviews included leaders, representatives, or members of medically underserved, low-income and minority populations, as well as funders, members of law enforcement, and leaders of community organizations. Their particular knowledge and understanding can provide insight on the nature of problems and give recommendations for solutions and future planning.

METHODOLOGY

The Health Council of Southeast Florida (HCSEF) developed protocols, scripts and questions for key informant interviews. Interview appointments were scheduled and each interview was conducted by a trained facilitator via telephone. The interviews lasted on average 30-45 minutes. Prior to beginning the interview, the facilitator provided an overview of the process and assured the confidentiality of all comments, names and other identifying information during reporting.

RESULTS

Twenty-one key informant interviews were conducted throughout 2016. A total of ten questions were asked and probes were used to clarify information and glean additional insight. The following information are the common themes that emerged during the key informant interviews.

Key Health Issues

- Mental health
 - Stress, anxiety, trauma and depression
- Obesity
- Heart disease and hypertension
- Diabetes
- Poor nutrition and diet
- Substance abuse
 - Alcohol abuse
 - Heroin and drug addiction

Populations with Unmet Needs

- Low income residents
- Uneducated
- Minority populations
- Uninsured, Underinsured
- Elderly
- Homeless

Community Strengths/Assets

- Hospitals
- Clinics, Safety Net Providers
 - Department of Health
 - Health Care District
- Non-profit organizations
- Faith-based institutions
- Parks, trails, beaches, sidewalks, playgrounds

Challenges and Barriers in Maintaining Health

- Lack of awareness of programs and services
- Lack of health education
- Lack of health care coverage
- Lack of providers accepting (certain types of) health insurance in county
 - Dentists
 - Specialists
- Transportation
- Lack of focus and interest on prevention
- Income disparity
- Limited access to resources to maintain healthy lifestyle
 - Healthy foods
- Lengthy wait times
- Language barriers
- Duplication of services

Opportunities to Note

- Education
 - Prevention
 - Healthy lifestyle
 - Navigation of health care system
- Increasing the awareness of resources in the community
- Increasing collaboration and coordination between community organizations and agencies

Suggestions

- Community policing
- Educate and engage the community
- Develop walk-in clinics with extended hours
- Partner with the local community-based organizations
- Focus on prevention and early Identification

COMMUNITY HEALTH IMPROVEMENT PLAN FOCUS GROUPS – 2018

Through the engagement of the Florida Department of Health in Palm Beach County and the Health Care District, the Health Council of Southeast Florida (HCSEF) conducted four focus groups between April 2018 through June 2018. The purpose of these focus groups was to present the 2016 Palm Beach County Community Health Improvement Plan (CHIP) to residents and collect their thoughts and feedback on the plan.

METHODOLOGY

HCSEF partnered with local community organizations in specific geographic locations to schedule focus groups and recruit participants. Individuals from various sub-populations participated and provided feedback summarized in this report, sub-populations included: the aging population (over 65 years of age), mothers and women of child-bearing age, residents of the Glades communities, and low-income individuals. Using a 'health equity' lens and being inclusive to all residents of Palm Beach County, discussions were facilitated in English, Spanish, and Haitian Creole. HCSEF staff recited the same script at the beginning of each focus group to explain the purpose of gathering individuals, the process of collecting and summarizing their feedback, and what the Community Health Improvement Plan. This is important because not all residents of the county are aware of the CHIP or the process required to create the document and plan. Another tool was developed specifically for these focus groups, listing questions and probes specific to the Palm Beach County CHIP activities, and used as a guide for each group discussion.

All participants were asked to complete a demographic form, which allowed HCSEF to record the demographic profile of the population providing feedback. Each focus group lasted approximately 60 to 90 minutes; to incentivize participation, HCSEF offered refreshments and provided a twenty-dollar gift card to all participants. Participants were assured that no names or identifying information would be included in the summary and report of this primary data collection. Once all focus groups were complete, HSEF compiled and analyzed the data; only feedback and remarks made by participants across the four focus groups were included in the summary below. Therefore, not everything shared in the groups are documented in the results.

RESULTS

TABLE 199: SITE, DATE, TIME, LANGUAGE SPOKEN AND NUMBER OF PARTICIPANTS IN FOCUS GROUPS

Site	Date	Time	Language	# of Participants
Bridges at Belle Glade	4/17/2018	5:00 PM	Haitian Creole	11
Bridges at Belle Glade	4/24/2018	5:00 PM	Spanish	12
Lord's Place – Halle Place	6/6/2018	5:30 PM	English	11
North County Senior Center	6/12/2018	12:30 PM	English	10
Total				45

Thoughts and Reactions to the Palm Beach County CHIP

- Acknowledgment of the stigma around mental and behavioral health, from the community as well as health providers
- Discussion around stress (personal and societal) being a root cause of many health issues
- Desire for an easier, less stressful application and enrollment process for safety net services i.e. health and human services
- Agreement that more residents need to be aware of community resources available
- The cost of health insurance, health care, and prescriptions is unaffordable for most and a barrier to healthy living

Feedback & Opportunities to Enhance the Implementation of the Palm Beach County CHIP

- Expand community outreach to increase awareness of resources and services available:
 - Who: general public, mothers, youth, seniors
 - What: mental and behavioral health services, health and nutrition education, support groups for diseases, incorporate a focus on community empowerment
 - How: continue engagement and conversations with the community, e.g. focus groups, community conversations, community advocates, community events, health fairs, etc.
 - Where: schools, parks, community centers, churches, senior centers were all suggestions given
 - Marketing: clear and easy-to-read signage on buildings and outreach materials; mail flyers, Spanish and Haitian Creole languages included, work with faith-based organizations, word-of-mouth
 - Incentive Suggestions: guest speakers focused on empowerment, necessities e.g. diapers, food, gift cards, etc.
- Share eligibility requirements for services i.e. Health Care District, Medicaid, Temporary Assistance for Needy Families (TANF), Supplemental Nutrition Assistance Program (SNAP), etc. in multiple easy to understand formats e.g. paper and electronic, in Spanish and Haitian Creole, attention to literacy level
- Simplify the application and enrollment process for services and employment opportunities to be more user-friendly, i.e. available in all languages, in-person assistance, paper applications available for individuals who do not own or use electronic devices (low-income, senior, foreign-born populations)
- Always include Spanish and Haitian Creole materials for general services, education, and outreach

Other Observations Noted:

- Residents of Belle Glade feel that there has been a decrease in breastfeeding resources
- Residents of the Glades region experience extreme working conditions, sometimes unhealthy ones
- The aging population would like to see more information shared and support services for Dementia, Alzheimer's, depression/isolation i.e. identifying warning signs, support groups, where to start for help
- Many residents shared expressed the care they receive throughout Palm Beach County could be of higher quality, specifically how they are treated i.e. cultural competency
- Participants shared a dire need for preventative and extensive dental care
- As whole, residents are eager to be engaged and want to be active participants in improving the health and wellbeing of themselves, their families, and their communities.

COMMUNITY HEALTH IMPROVEMENT PLAN & EFFECTS OF COVID-19 ON THE COMMUNITY'S HEALTH SURVEY – 2020

JUNE 2020 COMMUNITY HEALTH SURVEY

In June 2020, the Department of Health in Palm Beach County enlisted the assistance of the Health Council of Southeast Florida to develop and deploy a community health survey. The purpose of this survey was to gauge the community's perspective on the **Community Health Assessment** and Community Health Improvement Plan and its priority areas. Both entities decided they could leverage this survey as an opportunity to gain some insight into the needs of residents amidst the pandemic as well.

Methodology

The Health Council of Southeast Florida (HCSEF) developed an electronic survey with quantitative and qualitative questions. The survey consisted of 11 demographic questions, 20 questions related to the Palm Beach County Community Health Assessment and Community Health Improvement Plan, and five questions related to the effects of COVID-19. Additionally, 24 of the questions were close-ended, and one was open-ended. The survey can be found in Appendix B. The Health Council disseminated the survey by sharing it with the Advisory Council and asking them to share it via social media, newsletters, e-blasts, etc. Respondents could enter into a raffle for a \$15 gift card if they chose to provide their contact information. There were a total of 144 responses to the survey. HCSEF compiled and analyzed the results of the survey, which are detailed below.

Results

Demographics

The table below shows the ZIP codes of residents that completed the Community Health Survey. Approximately 13% of respondents were from Greenacres, and 9% were from Royal Palm Beach. Residents from 43 out of Palm Beach County's 52 ZIP codes responded to the survey.

TABLE 200: COMMUNITY HEALTH SURVEY RESULTS – ZIP CODE OF RESPONDENTS

ZIP Code	City	Number of Respondents	Percent of Respondents
33430	Belle Glade	7	4.9%
33498	Boca Raton	1	0.7%
33434	Boca Raton	1	0.7%
33433	Boca Raton	3	2.1%
33428	Boca Raton	2	1.4%

33493	South Bay	2	1.4%
33467	Wellington, Greenacres, Lake Worth	5	3.5%
33405	West Palm Beach	5	3.5%
33401	West Palm Beach	1	0.7%
Out of county		1	0.7%
Invalid ZIP code		2	1.4%
No response		4	2.8%
Total		144	100.0%

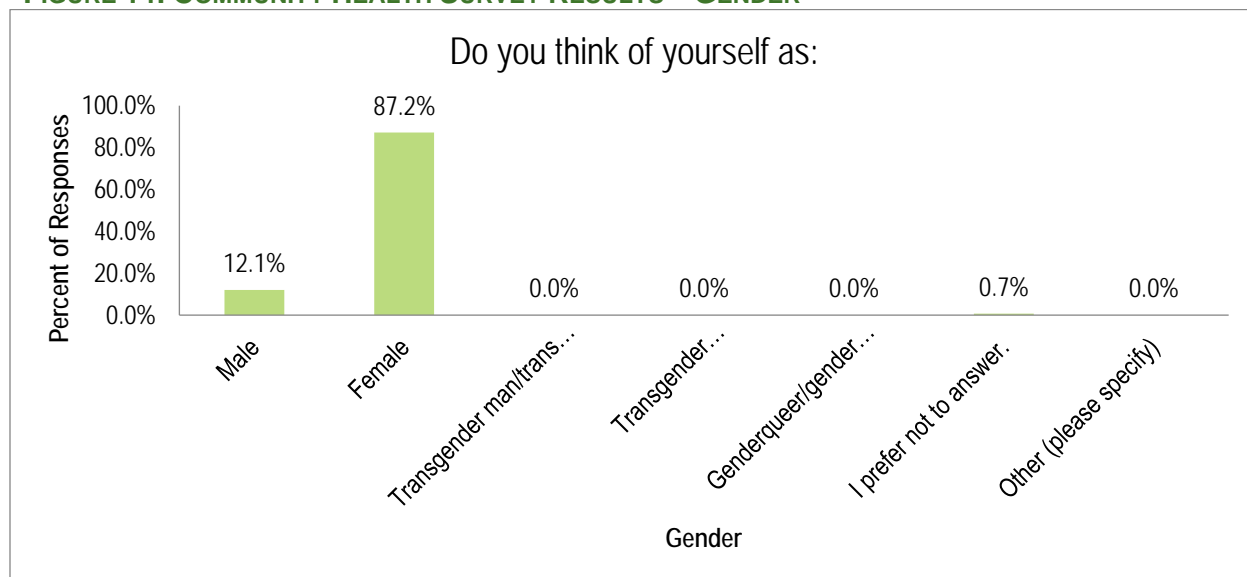

A total of 143 residents answered the question regarding age. Almost 33% of residents were in the age group 45-54 followed by 35-44 (20%), 55-64 (17%) and 25-34 (15%). There were no residents in the age group of 18-24 that responded.

FIGURE 13: COMMUNITY HEALTH SURVEY RESULTS – AGE OF RESPONDENTS

The next question asked about gender. See Appendix B for a complete list of answer choices. These choices align with the Centers for Disease Control and Prevention recommendations for collecting sexual orientation and gender identity information.³² A total of 141 participants answered this question. Most respondents self-identified as female (87%).

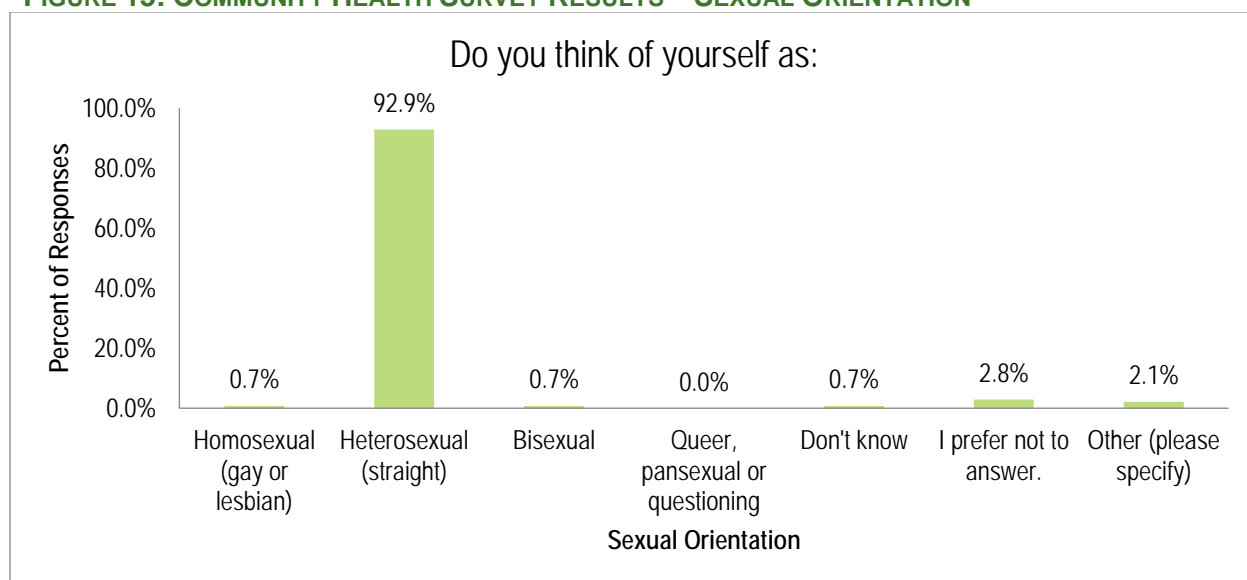

FIGURE 14: COMMUNITY HEALTH SURVEY RESULTS – GENDER

³² Centers for Disease Control and Prevention (2020). Collecting sexual orientation and gender identity information. Retrieved from <https://www.cdc.gov/hiv/clinicians/transforming-health/health-care-providers/collecting-sexual-orientation.html>

The following question asked about sexual orientation. See Appendix B for a complete list of answer choices. These choices align with the Centers for Disease Control and Prevention recommendations for collecting sexual orientation and gender identity information.³² A total of 141 respondents answered this question. Nearly 93% of participants were heterosexual. Three individuals responded as “other,” and responses included “female,” “straight,” and one did not provide an additional response.

FIGURE 15: COMMUNITY HEALTH SURVEY RESULTS – SEXUAL ORIENTATION

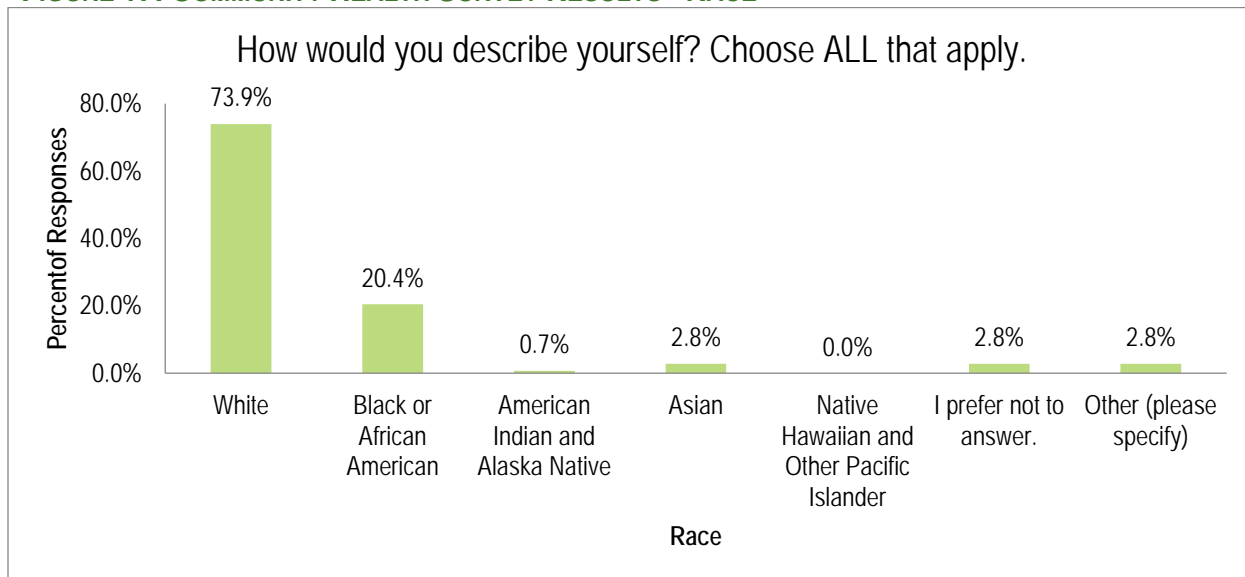

The next question asked whether respondents were of Hispanic, Latino, or Spanish origin. A total of 143 respondents answered this question. Nearly 20% of respondents self-identified as having Hispanic, Latino, or Spanish origin.

FIGURE 16: COMMUNITY HEALTH SURVEY RESULTS - ETHNICITY

As shown below, this next question asked residents to self-identify their racial identity. A total of 142 respondents answered this question. Almost three-fourths of respondents self-identified as White and a fifth self-identified as Black or African American.

FIGURE 17: COMMUNITY HEALTH SURVEY RESULTS - RACE

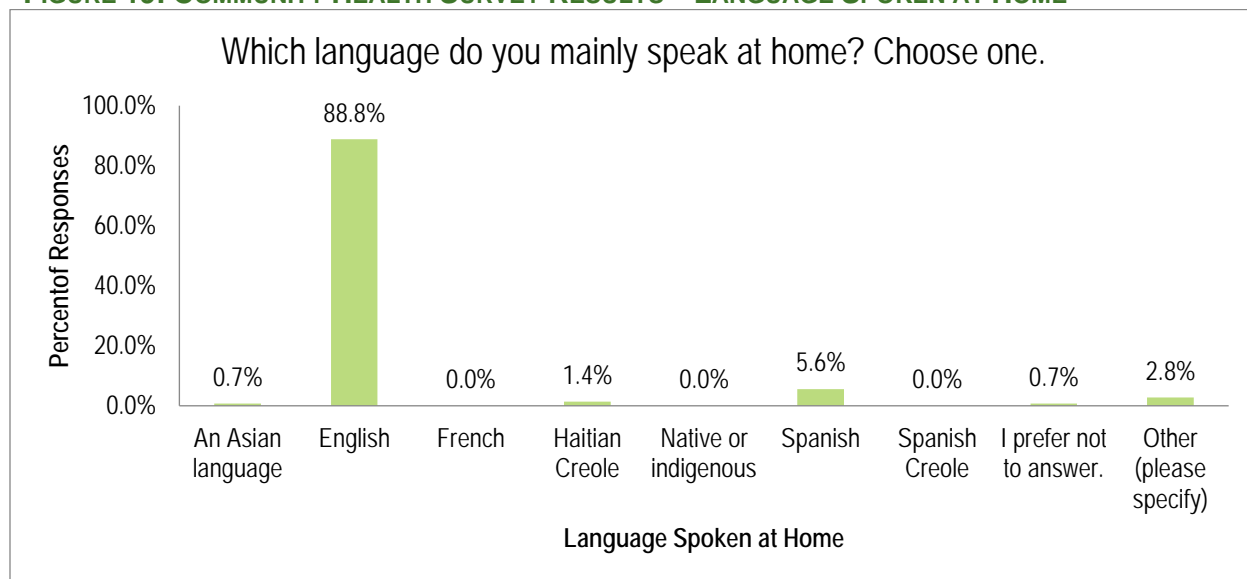

The following chart shows the marital status of respondents. A total of 143 respondents answered this question. Almost 62% of respondents were married, cohabitating, or in a domestic partnership, followed by 16% who were single, never married, and 15% who were separated or divorced.

FIGURE 18: COMMUNITY HEALTH SURVEY RESULTS – MARITAL STATUS

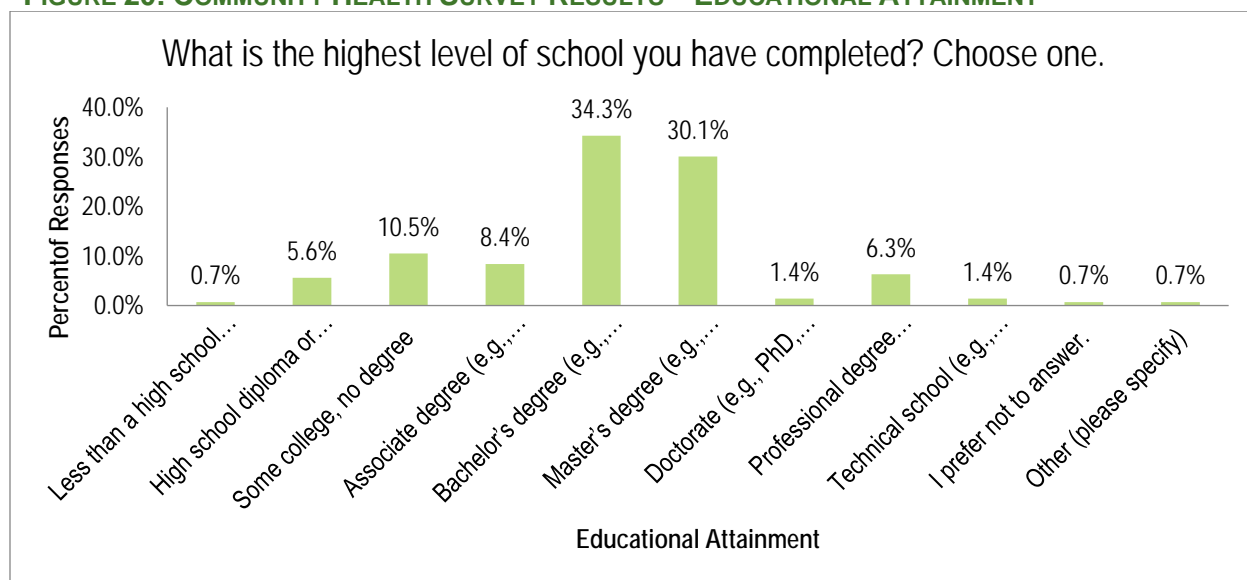

The next question asked about the language spoken at home. A total of 143 respondents answered this question. Almost 89% of respondents reported speaking English at home, and 5.6% reported speaking Spanish at home. Four participants answered 'other,' and responses included Portuguese, Arabic, bilingual, and English and Spanish.

FIGURE 19: COMMUNITY HEALTH SURVEY RESULTS – LANGUAGE SPOKEN AT HOME

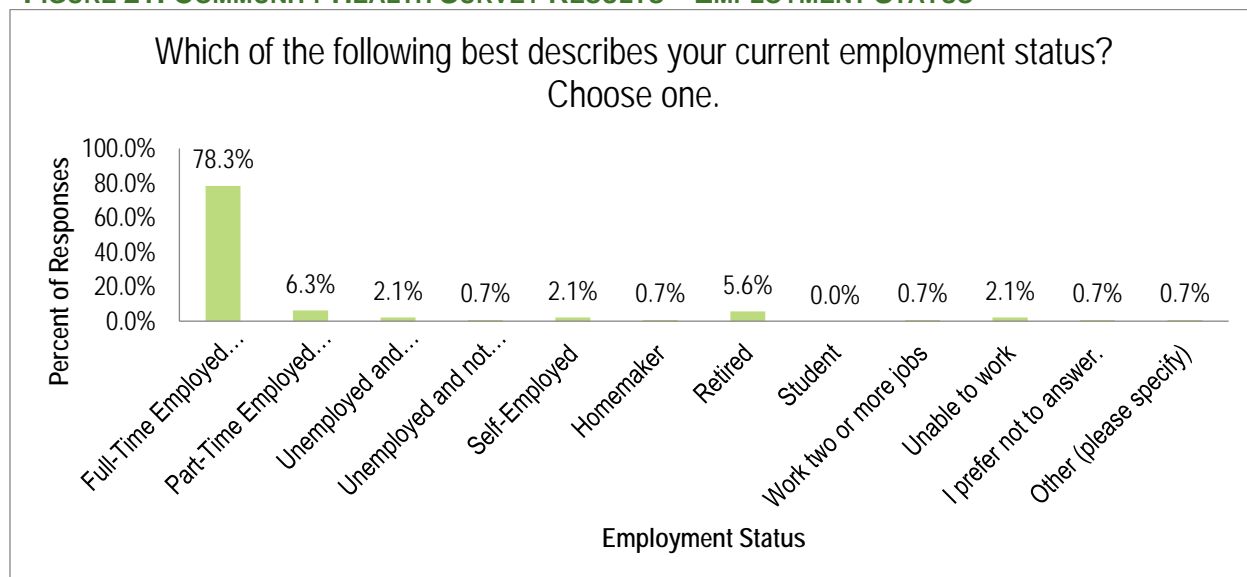

The following chart shows the educational attainment of respondents. A total of 143 respondents answered this question. See Appendix B for a complete list of answer choices. Approximately 34% of respondents had a bachelor's degree, and 30% had a master's degree.

FIGURE 20: COMMUNITY HEALTH SURVEY RESULTS – EDUCATIONAL ATTAINMENT

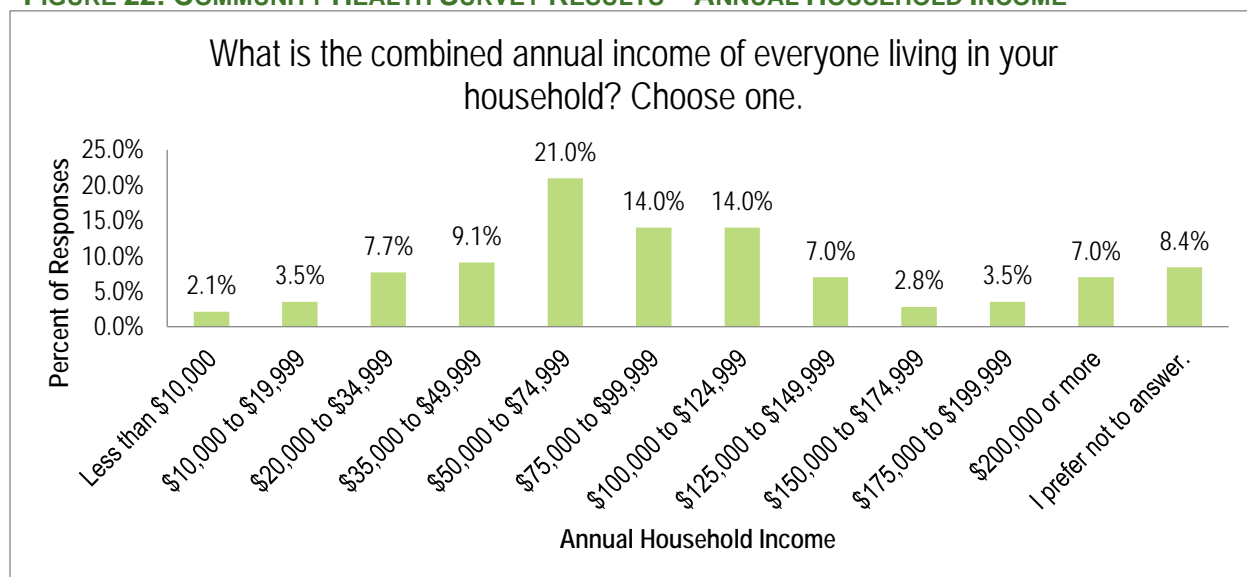

The next chart shows the employment status of respondents. A total of 143 respondents answered this question. See Appendix B for a complete list of answer choices. Roughly 78% of the respondents reported working full-time. One individual selected “other” and reported “retired.”

FIGURE 21: COMMUNITY HEALTH SURVEY RESULTS – EMPLOYMENT STATUS

The following chart shows the annual household income of respondents. A total of 143 respondents answered this question. See Appendix B for a complete list of answer choices. A fifth of respondents reported an annual household income of \$50,000-\$75,000 followed by 14% who reported \$75,000-\$100,000 and 14% who reported \$100,000-\$125,000.

FIGURE 22: COMMUNITY HEALTH SURVEY RESULTS – ANNUAL HOUSEHOLD INCOME

Survey Questions

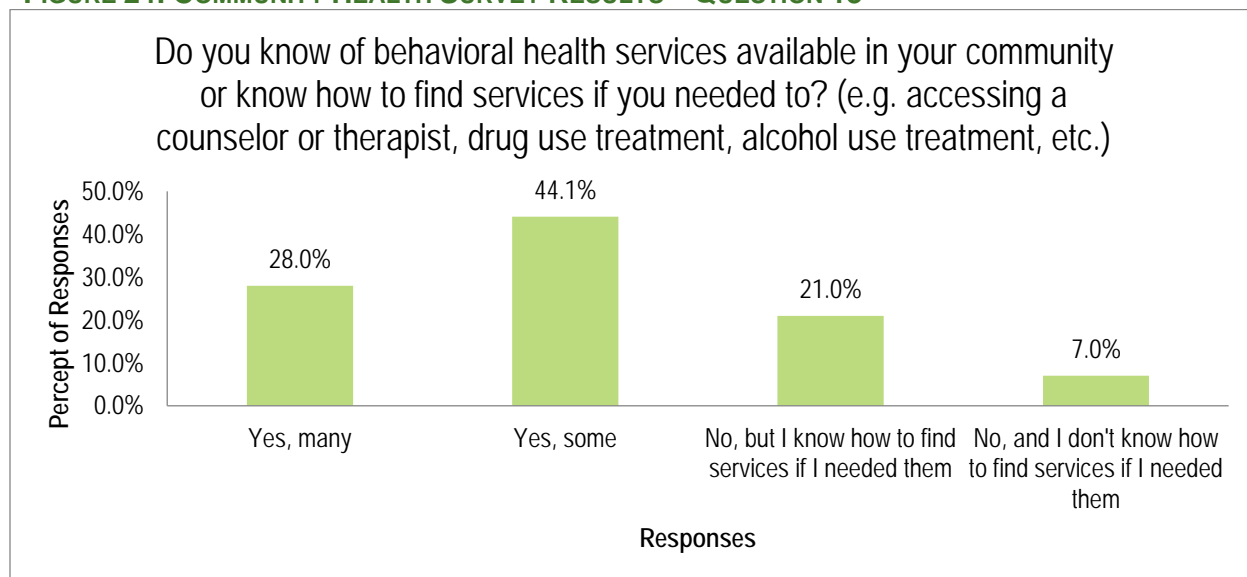

The following chart shows responses to the question, “How would you rate the importance of mental and behavioral health as a priority for the Palm Beach County Community Health Improvement Plan?” A total of 139 respondents answered this question. The answer choices were a scale from “not important” to “very important.” For this question, zero indicates “not important,” and ten indicates “very important.” Almost 60% of respondents reported mental and behavioral health is “very important” as a priority area.

FIGURE 23: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 12

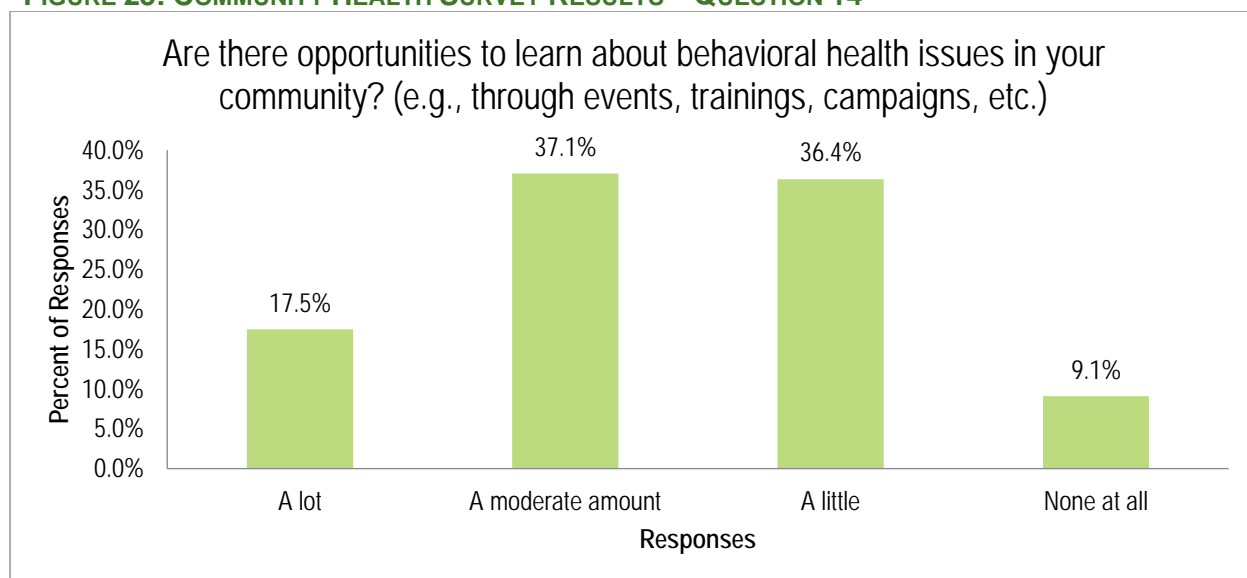

A total of 143 respondents answered the question, “Do you know of behavioral health services available in your community or know how to find services if you needed to?” Forty-four percent of respondents answered “yes, some,” 28% answered “yes, many,” and 21% answered “no, but I know how to find services if I needed them.”

FIGURE 24: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 13

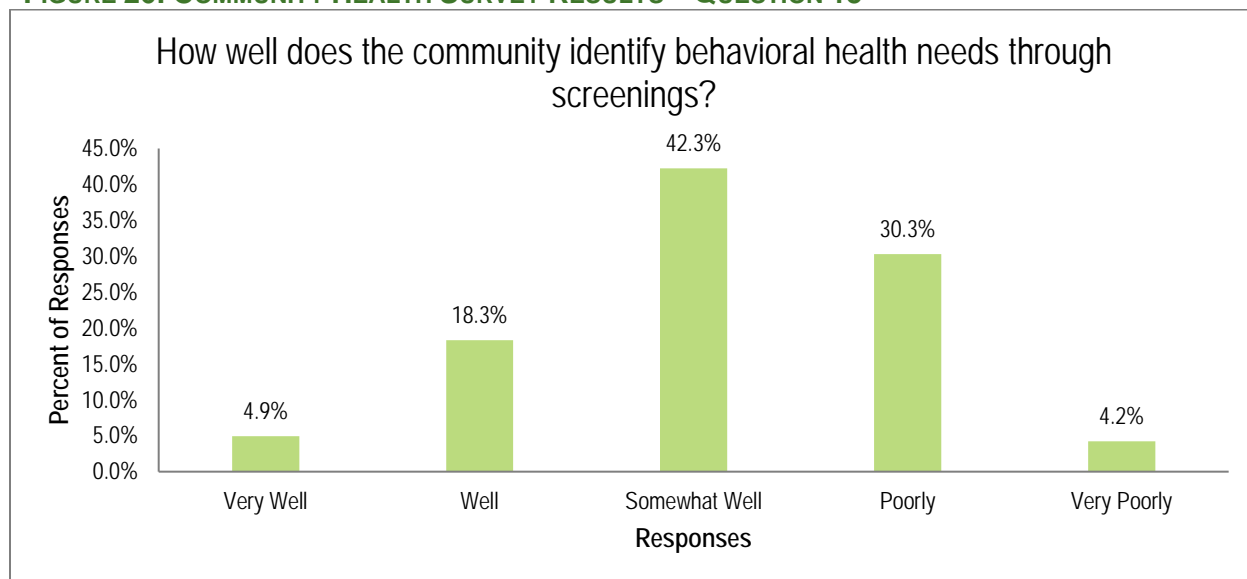

The following question asked respondents, “Are there opportunities to learn about behavioral health issues in your community?” A total of 143 respondents answered this question. Thirty-seven percent of respondents answered “a moderate amount,” 36% answered “a little,” and 18% answered “a lot.”

FIGURE 25: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 14

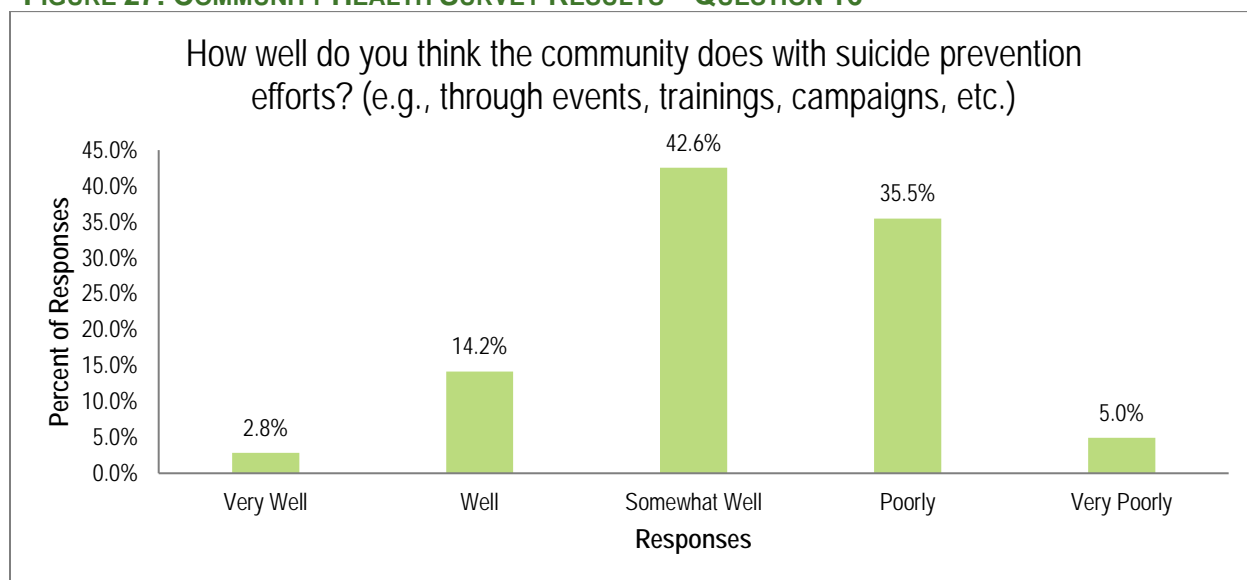

The chart below shows responses to the question, “How well does the community identify behavioral health needs through screenings?” A total of 142 respondents answered this question. Roughly 42% of respondents answered, “somewhat well,” followed by “poorly” (30%) and “well” (18%).

FIGURE 26: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 15

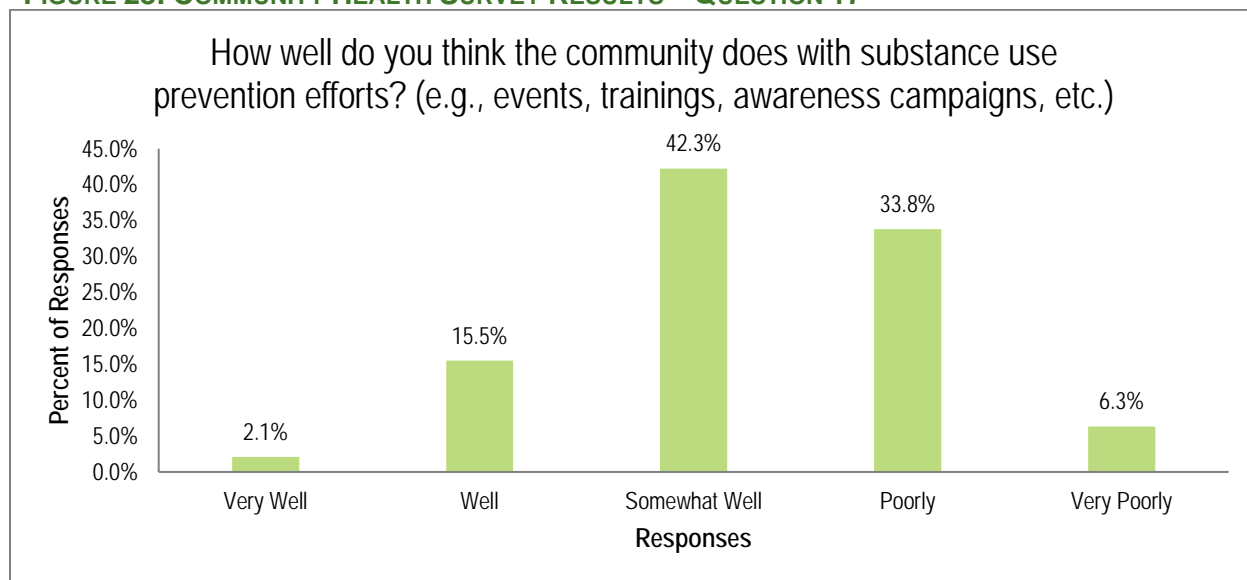

The next question asked residents, “How well do you think the community does with suicide prevention efforts?” A total of 141 respondents answered this question. Nearly 43% of respondents answered “somewhat well,” followed by 36% with “poorly.”

FIGURE 27: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 16

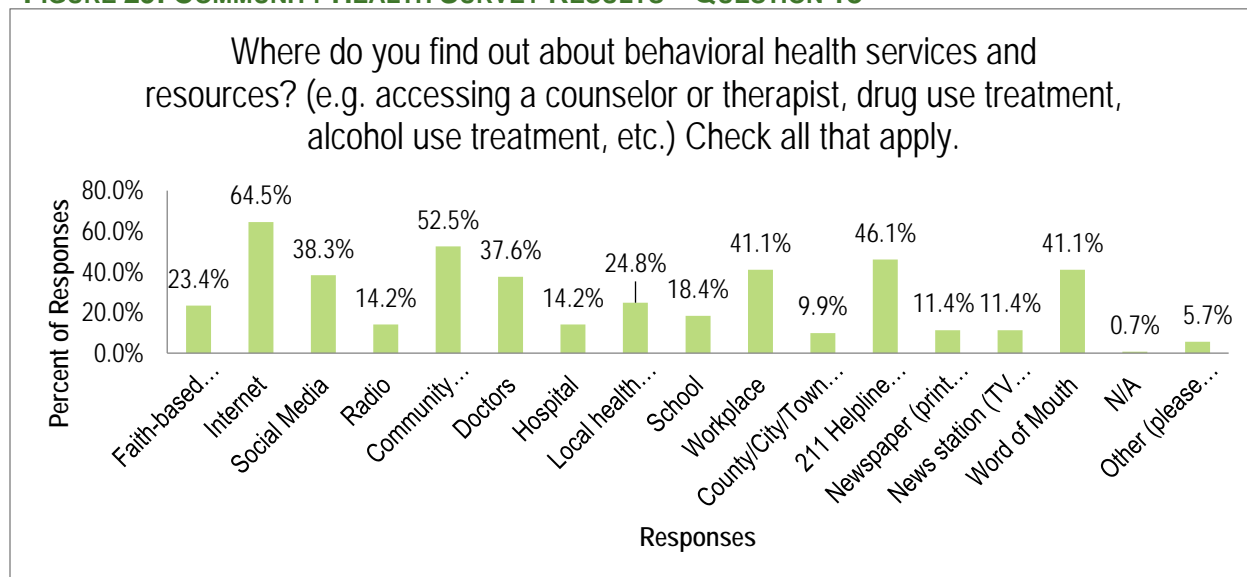

A total of 142 respondents answered the question, “How well do you think the community does with substance use prevention efforts?” Forty-two percent of respondents answered “somewhat well,” and 34% answered “poorly.”

FIGURE 28: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 17

The graph below shows results to the question, “Where do you find out about behavioral health services and resources?” A total of 141 respondents answered this question. It is important to note respondents could check all that apply. The most common responses were internet followed by community organizations, 211 Helpline, workplace, word of mouth, social media, and doctors. Eight respondents indicated “other,” and answers included “BRIDGES at Boynton Beach,” “friends,” “Glades Initiative,” “health insurance,” and “YMCA.” See Appendix B for all answer choices.

FIGURE 29: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 18

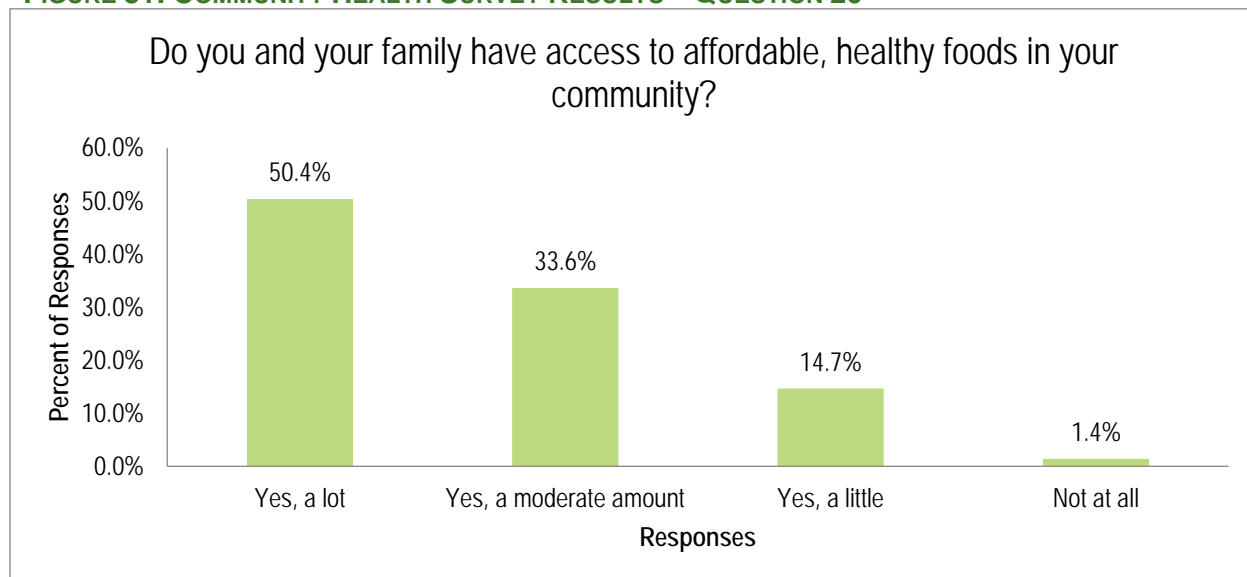

When asked, “How would you rate the importance of active living and healthy lifestyles as a priority for the Palm Beach County Community Health Improvement Plan?”, a total of 118 respondents answered this question. The answer choices were a scale from “not important” to “very important.” For this question, zero indicates “not important,” and ten indicates “very important.” Forty-four percent of respondents indicated active living and healthy lifestyles are “very important.”

FIGURE 30: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 19

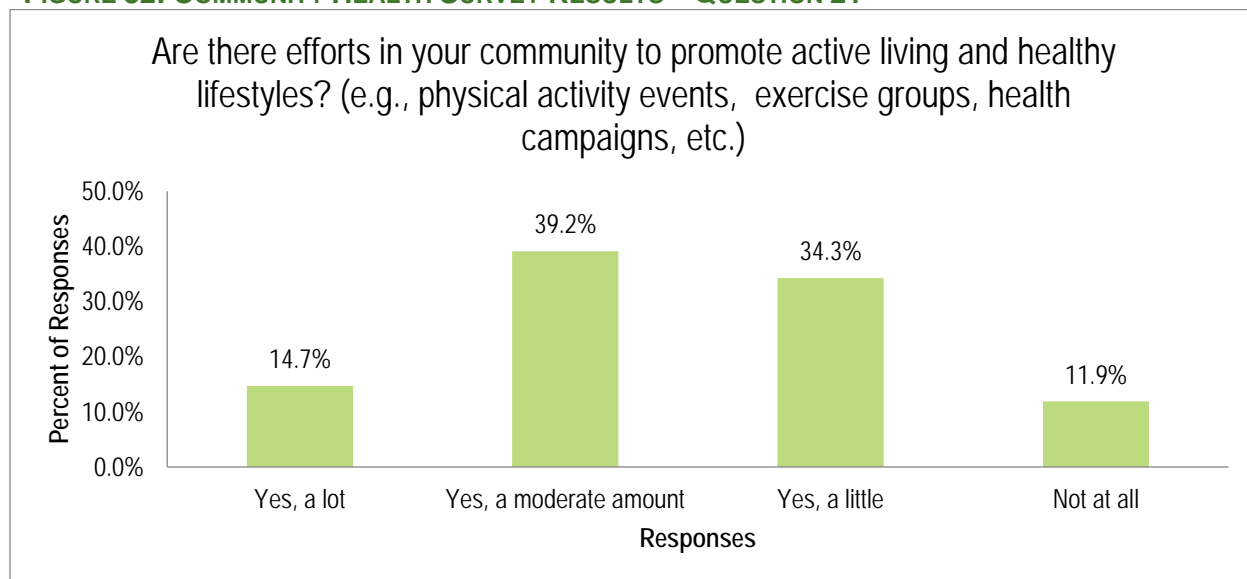

The next chart shows responses to the question, “Do you and your family have access to affordable, healthy foods in your community?” There was a total of 143 responses to this question. Half of the respondents indicated they had a lot of access to healthy foods, while 34% indicated a moderate amount.

FIGURE 31: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 20

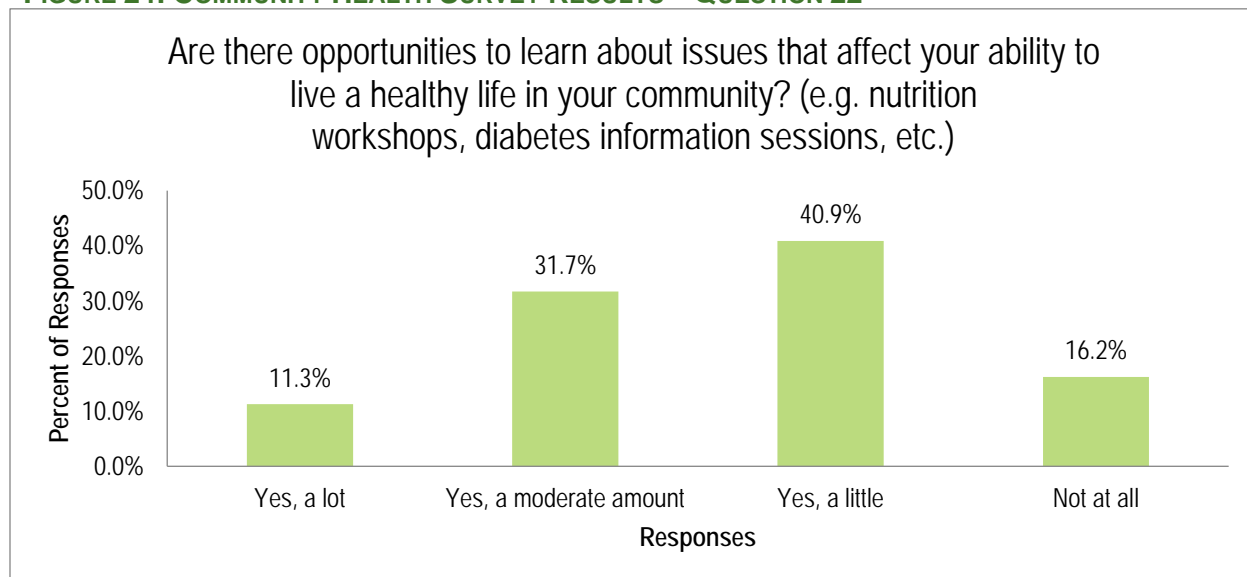

There was a total of 143 responses to the question, “Are there efforts in your community to promote active living and healthy lifestyles?” Thirty-nine percent of respondents indicated, “yes, a moderate amount,” followed by 34% who indicated “yes, a little.” Twelve percent of respondents indicated “not at all.”

FIGURE 32: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 21

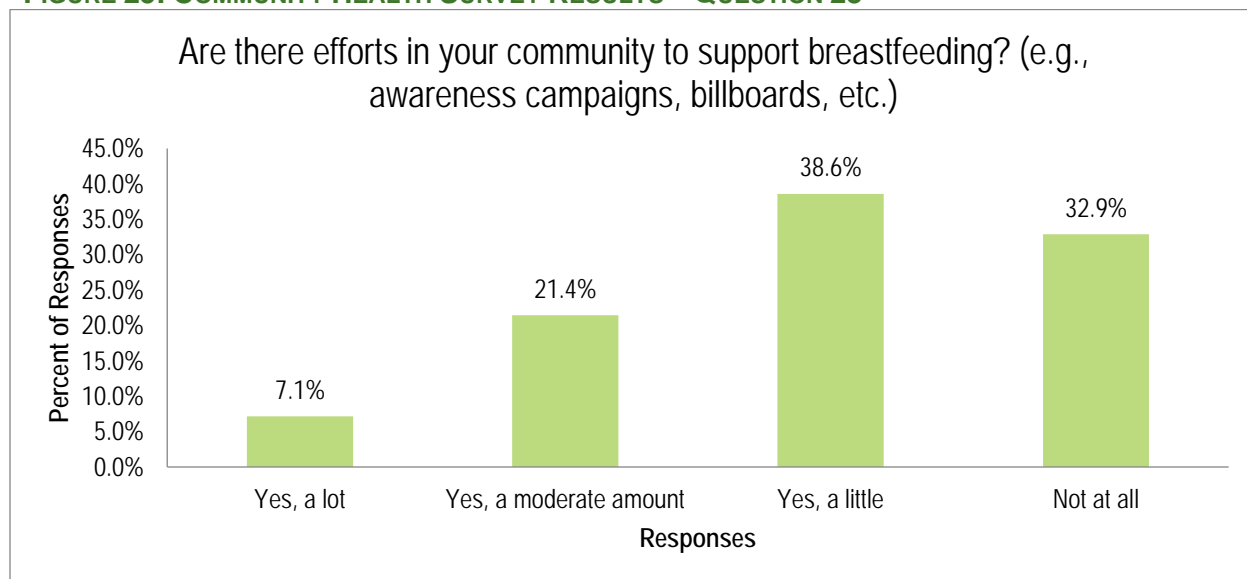

This next graph shows results to the question, “Are there opportunities to learn about issues that affect your ability to live a healthy life in your community?” Almost 41% of respondents indicated “yes, a little,” followed by a third who indicated “yes, a moderate amount.” Sixteen percent of respondents indicated “not at all.” There was a total of 142 responses to this question.

FIGURE 24: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 22

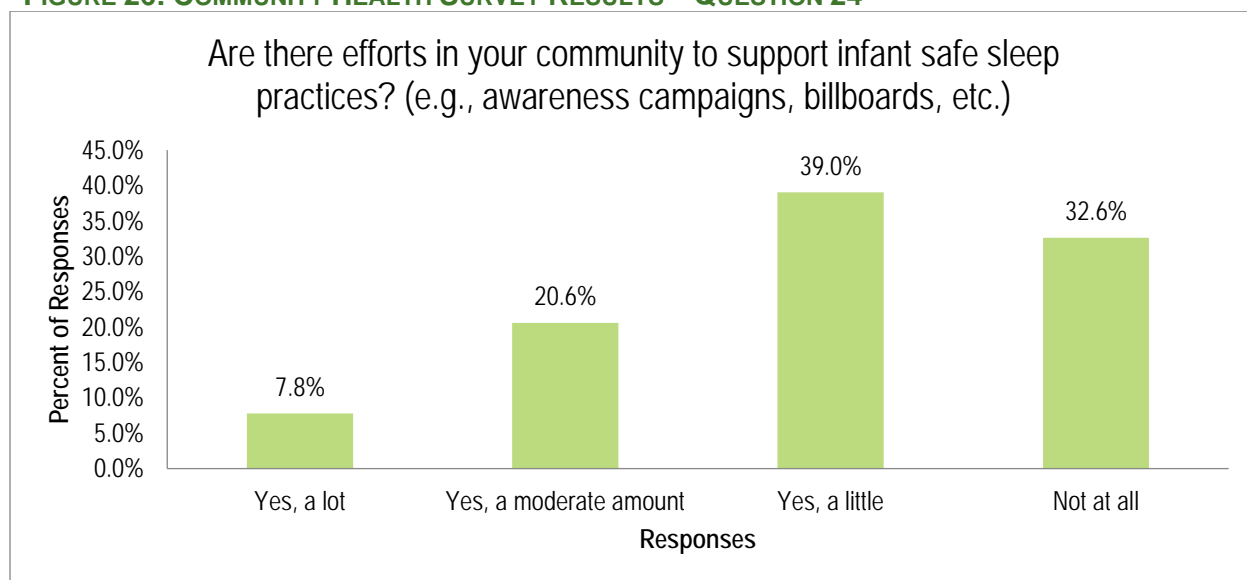

There were a total of 140 responses to the question, “Are there efforts in your community to support breastfeeding?” Almost 40% of respondents indicated “yes, a little,” and a third selected “not at all.” A fifth of participants indicated, “yes, a moderate amount.”

FIGURE 25: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 23

The following chart shows responses to the question, “Are there efforts in your community to support infant safe sleep practices?” A total of 141 respondents answered this question. Almost 40% of respondents answered, “yes, a little,” followed by nearly a third that answered, “not at all.” A fifth of respondents answered, “yes, a moderate amount.”

FIGURE 26: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 24

When asked, “Where do you find out about active living and healthy lifestyle services and resources?” the most common response was the internet. After the internet, the most common responses were social media, community organizations, workplace, and doctors. Five individuals selected “other” and responses included “BRIDGES at Boynton Beach,” “YMCA,” “parks,” “friends,” and “word of mouth.” A total of 143 respondents answered this question. It is important to note that residents could select more than one answer. See Appendix B for all answer choices.

FIGURE 27: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 25

The next graph shows results to the question, “How would you rate the importance of access to care and services as a priority for the Palm Beach County Community Health Improvement Plan?” The answer choices were a scale from “not important” to “very important.” For this question, zero indicates “not important,” and ten indicates “very important.” A total of 111 residents answered this question. Almost 47% of respondents indicated access to care and services is “very important.”

FIGURE 28: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 26

The following question asked, “Do you know where to find health and social services and resources you or your family may need?” Sixty-two percent of respondents indicated “yes,” and almost 30% indicated “no, but I know how to find services if I needed them.” A total of 143 residents responded to this question.

FIGURE 29: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 27

The graph below shows responses to the question, “Are there opportunities to learn about issues that affect older adults in your community?” Forty-three percent of respondents answered “yes, a little,” followed by a quarter which responded “yes, a moderate amount,” and a fifth which indicated “not at all.” A total of 143 residents answered this question.

FIGURE 31: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 28

The chart below shows responses to the question, “How well does the community identify and address barriers to accessing health and social services and resources?” A total of 135 residents responded to this question. Half of the respondents answered the community does “somewhat well.”

FIGURE 32: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 29

The question below asked, “Do you know of services and resources that exist for older adults?” A total of 143 residents answered this question. Almost half indicated “yes, some,” followed by 30%, which indicated “no, but I know how to find services if I needed them.”

FIGURE 33: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 30

The following chart shows responses to the question, “Where do you find out about health and social services and resources?” It is important to note that for this question, respondents could check all that apply. The most common responses included the internet, community organizations, social media, 211 Helpline, doctors, and workplace. Four respondents answered “other,” and responses included “BRIDGES at Boynton Beach,” “friends,” and “YMCA.”

FIGURE 34: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 31

The next question asked, “How much has COVID-19 affected you and your household?” Approximately 57% of respondents answered “some impact, a few unmet needs,” followed by a fifth which responded, “significant impact, many unmet needs.”

FIGURE 35: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 32

Question 32 asked residents how much COVID-19 has affected several issues for their household. This bar graph shows results for paying for housing/utilities. Approximately 53% of respondents indicated “no impact, no change,” while almost 28% reported “some impact.” A total of 141 residents answered this question.

FIGURE 36: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 32, PAYING FOR HOUSING/UTILITIES

The chart below shows how COVID-19 has affected access to food for residents. Forty-four percent of respondents indicated COVID-19 has had “some impact,” while 42% reported “no impact, no change.” A total of 140 residents answered this question.

FIGURE 37: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 32, ACCESS TO FOOD

The bar graph below shows how COVID-19 has affected residents' health status. Almost 46% stated there was “no impact, no change,” while nearly a third indicated “some impact.” A total of 140 residents answered this question.

FIGURE 38: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 32, HEALTH STATUS

The graph below shows how COVID-19 has affected employment/unemployment in residents' household. Approximately half of the respondents answered "no impact, no change," while nearly 28% indicated "some impact." A total of 141 residents responded to this question.

FIGURE 39: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 32, EMPLOYMENT/UNEMPLOYMENT

The figure below shows how COVID-19 has affected childcare for residents. A total of 140 residents answered this question. Forty percent of residents indicated this question was not applicable. Of those which this question applied to, nearly 37% reported "no impact, no change."

FIGURE 40: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 32, CHILDCARE

The following figure shows how COVID-19 has affected residents' mental health. A total of 141 residents answered this question. Half of the respondents answered it has had "some impact," while nearly 23% reported "significant impact."

FIGURE 41: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 32, MENTAL HEALTH

The next question on the survey asked: "Due to COVID-19, what is your primary concern at this time?" Half of the participants reported health/safety followed by mental health (13%) and employment/unemployment (11%). A total of 143 residents answered this question.

FIGURE 42: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 33

The next question asked whether residents knew about services and supports available to help with the effects of COVID-19. A total of 143 residents answered this question. Almost 48% indicated “yes, some,” followed by a quarter which responded, “no, but I know how to find services if I needed them.”

FIGURE 43: COMMUNITY HEALTH SURVEY RESULTS – QUESTION 34

Question 35: How has COVID-19 affected your community?

The final question in the survey was an open-ended question to provide residents the opportunity to explain how the pandemic has affected their community. A total of 82 respondents answered this question. The following themes emerged from this question:

- Loss of income due to unemployment
- Many are struggling emotionally and with their mental health (fear, stress, anxiety, loneliness)
- COVID-19 highlights inequities in communities
- Children are not able to participate in recreational activities
- Many businesses have closed, especially locally-owned
- Support of a mandate to enforce face coverings
- Divisiveness

Key responses for this question include:

- “Nothing is the same”
- “Huge impact in every facet of life”
- “Devastating”
- “It has totally polarized my community”
- “Precautions are not universal”
- “More and more are not following the guidelines”

June 2020 Community Health Advisory Council Meeting

On June 1, 2020, the Department of Health in Palm Beach County enlisted the Health Council of Southeast Florida to facilitate a Community Health Advisory Council meeting. DOH-Palm Beach decided to have a representative from the Palm Beach County Community Services Department as a guest speaker as they would be able to speak to some of the social services needs residents have expressed. This would also serve as an opportunity to educate Advisory Council members on the health and human services system of care in the County.

As a result of the conversation, the group was able to have discussions regarding issues they have seen with the residents they serve. For example, one member raised the issue of documentation to receive assistance through the Coronavirus Aid, Relief, and Economic Security (CARES) Act. Additionally, participants expressed an interest in learning about the unemployment resources available in the County. Given the concern regarding rental and mortgage assistance, it was beneficial to learn about the CARES act and its various categories and resources for housing assistance.

Overall, amidst the COVID-19 pandemic, the Advisory Council proved to be a useful and helpful vessel for exchanging information and serving as a place for leaders in the community to discuss issues impacting residents and potential solutions.

Conclusion

Results from this Community Health Survey provide a critical perspective of the community. This survey was able to gauge whether the identified priority areas for the Community Health Improvement Plan are important to the community. Additionally, residents provided insight as to how well the County is doing with the implementation of the Community Health Improvement Plan and identified areas for improvement. Finally, the inclusion of questions about COVID-19 highlights the issues residents are concerned about and can provide crucial insight into programs or services that could agencies can implement to improve the community's health during these difficult times. The Palm Beach County Community Health Advisory Council will use these results to inform decisions that will promote community health.

Identification of Strategic Health Issues & Priorities

Beginning in August 2016, the Florida Department of Health in Palm Beach County and the Health Care District of Palm Beach County engaged the Health Council of Southeast Florida to lead and facilitate the CHA and CHIP processes.

Problem Identification and Prioritization

Step 1: With the help of the Florida Department of Health in Palm Beach County and the Health Care District of Palm Beach County, the Health Council of Southeast Florida identified community members that would be invited to participate on the Palm Beach County Advisory Council. In order to ensure broad representation on the Council, a matrix was used during the identification process.

In August 2016, HCSEF facilitated a series of two meetings utilizing the Local Public Health System Assessment (LPHSA), an instrument developed by the Centers for Disease Control (CDC). The first meeting was the internal LPHSA, which was attended by only Health Department and Health Care District staff members. At the next meeting, various community leaders and stakeholders convened to complete the second and final portion of the assessment tool.

Step 2: The Advisory Council met for a total of four meetings during the months of October, November and December 2016. During these meetings, meeting participants extensively reviewed both quantitative data and qualitative data specific to Palm Beach County. The quantitative data, or secondary data, was composed of indicators related to the demographic and socioeconomic characteristics of residents, as well as the health status and health resource availability. The primary data, or qualitative data, was information compiled from the LPHSA, the focus groups and the key informant interviews. In December of 2016, the Community Health Assessment was finalized.

Analysis and Implementation

Step 3: In February 2017, the Advisory Council reconvened for a series of six meetings to develop the CHIP. Members were asked to discuss what Palm Beach County would look like if it were 'healthy' and to define what 'healthy' meant to them. After thoroughly reviewing data that had been presented during the CHA process, Council members participated in a series of exercises to identify and select priorities that would become the focus of the CHIP.

The Council identified and discussed a number of possibilities, but elected to move forward with three CHIP priorities: Mental and Behavioral Health, Active Living and Healthy Lifestyles, and Access to Care and Services.

Steps 4-8: Once the priorities were defined by the Advisory Council, a Root Cause Analysis exercise was conducted. Advisory Council members were asked to explore each priority's underlying causes. The information that was collected from this exercise aided in the development of goals, objectives and strategies. With the help of the Health Department, HCSEF worked to refine the objectives and goals to ensure they were S.M.A.R.T.

Steps 9-10: The remaining two steps, the Implementation and Monitoring of the CHIP process and outcomes with be ongoing throughout the term of the CHIP (2017-2021).

Summary of Changes

June 2020

- Updated "Population 65+ With A Disability, Palm Beach County and Florida, 2017" Table to "Population 65+ With A Disability, Palm Beach County and Florida, 2018"
- Updated "Poverty Status in The Past 12 Months by Age and Gender, Palm Beach County and Florida, 2017" Table to "Poverty Status in The Past 12 Months by Age and Sex, Palm Beach County and Florida, 2018"
- Updated "Poverty Status in The Past 12 Months by Race and Ethnicity, Palm Beach County, 2017" Table to "Poverty Status in The Past 12 Months by Race and Ethnicity, Palm Beach County, 2018"
- Updated "Infant Death Per 1,000 Live Births, Palm Beach County and Florida, 2013-2017" Table to "Infant Death Per 1,000 Live Births, Palm Beach County and Florida, 2014-2018"
- Added "Infant Death Per 1,000 Live Births by Race, Palm Beach County and Florida, 2014-2018"
- Updated "Infant Death Per 1,000 Live Births by Race, Palm Beach County, 2013-2017" Table To "Infant Death Per 1,000 Live Births by Race, Palm Beach County, 2014-2018"
- Added "Infant Death Per 1,000 Live Births by Ethnicity, Palm Beach County and Florida, 2014-2018"
- Updated "Infant Death Per 1,000 Live Births by Ethnicity, Palm Beach County, 2013-2017" Table To "Infant Death Per 1,000 Live Births by Ethnicity, Palm Beach County, 2014-2018"
- Updated "Mothers Who Initiate Breastfeeding, Palm Beach County and Florida, 2013-2017" Table To "Mothers Who Initiate Breastfeeding, Palm Beach County and Florida, 2014-2018"

- Updated "Suicide Death Count by Age, Palm Beach County, 2011-2017 (3-Year Rolling)" Table to Updated "Suicide Death Count by Age, Palm Beach County, 2012-2018 (3-Year Rolling)"
- Updated "Crude Suicide Death Rate by Age, Palm Beach County, 2011-2017 (3-Year Rolling)" Table To "Crude Suicide Death Rate by Age, Palm Beach County, 2012-2018 (3-Year Rolling)"

- Updated "Hospitalizations from Or with Diabetes, Palm Beach County and Florida, 2013-2017" Table to "Hospitalizations from Or with Diabetes, Palm Beach County and Florida, 2014-2018"
- Updated "Hospitalizations from Or with Diabetes by Race, Palm Beach County and Florida, 2013-2017" Table to "Hospitalizations from Or with Diabetes by Race, Palm Beach County and Florida, 2014-2018"
- Updated "Hospitalizations from Or with Diabetes by Ethnicity, Palm Beach County and Florida, 2013-2017" Table to "Hospitalizations from Or with Diabetes by Ethnicity, Palm Beach County and Florida, 2014-2018"
- Updated "Probable Alzheimer's Disease Cases, Palm Beach County, 2014-2015" Table to "Probable Alzheimer's Disease Cases, Palm Beach County and Florida, 2014-2018"
- Updated "Preventable Hospitalizations Under 65 From All Conditions, Palm Beach County and Florida, 2010-2017" Table to "Preventable Hospitalizations Under 65 From All Conditions, Palm Beach County and Florida, 2014-2018"
- Updated "Adults with Any Type of Health Care Insurance Coverage, Palm Beach County and Florida, 2002, 2007, 2010, 2013" Table to "Adults with Any Type of Health Care Insurance Coverage, Palm Beach County and Florida, 2010, 2013, 2016"
- Updated "Uninsured by Age and Gender, Palm Beach County, 2017" Table to "Uninsured by Age and Sex, Palm Beach County, 2018"
- Updated "Population 65+ With and Without Insurance, Palm Beach County and Florida, 2017" Table to "Population 65+ With and Without Insurance, Palm Beach County and Florida, 2018"
- Updated "Uninsured by Race and Ethnicity, Palm Beach County, 2017" Table to "Uninsured by Race and Ethnicity, Palm Beach County, 2018"
- Updated "Uninsured by Census County Division, Palm Beach County, 2017" Table To "Uninsured by Census County Division, Palm Beach County, 2018"
- Added 'Identification of Strategic Health Issues & Priorities' section
- Added Palm Beach County Community Health Survey questions and report from June 2020
- The following indicators include an explanation of health disparities: preterm births, infant deaths, fetal deaths, hospitalizations from or with diabetes, cancer incidence, cervical cancer incidence, colorectal cancer incidence, breast cancer incidence, and prostate cancer incidence.
- The following indicators include an explanation of the connection between social determinants of health on health status: poverty, income, education, unemployment, public assistance benefits, housing, transportation, and crime.

CONCLUSION

This report was a collaborative effort by community members with the goal of providing residents access to quality health and human services. This community health needs assessment will provide a better understanding of the health needs in the county and will help guide future planning efforts to improve the overall health and quality of life in Palm Beach County. The data collected and presented throughout this assessment will prove to be a valuable asset to the community as a whole moving forward.

APPENDICES

Appendix A: Community Health Improvement Plan Focus Group Tool – 2018

FOCUS GROUP DISCUSSION: GUIDELINES AND QUESTIONS

A. Introduction:

Hello and welcome to our focus group! A focus group is simply a gathering of people who have something in common. Each of you is here today as a resident of Palm Beach County, and have a unique perspective on the services that are provided in your communities.

My name is [REDACTED] and I represent The Health Council of Southeast Florida, Inc. and we are working with the Department of Health in Palm Beach County and the Healthcare District to implement the Palm Beach County Community Health Improvement Plan (CHIP). The CHIP was created after the Community Health Needs Assessment was completed in December 2016. Engaged community partners reviewed the data collected and had extensive conversations to determine the priority areas for the next three years.

Local policymakers and healthcare providers focus on the health care needs that were highlighted throughout the Community Health Needs Assessment. The three priority areas for the 2016-2021 Palm Beach County Community Health Improvement Plan are:

1. Mental and Behavioral Health
2. Active Living and Healthy Lifestyles
3. Access to Care and Services

We will be talking in general about the quality of life in your community and about the health needs that you and your families may have. The purpose is to understand what you think about the Community Health Improvement Plan, what you believe are the most pressing healthcare needs of your community, and the factors that influence an individual's health and health care. Your input is very important to us.

Our goal is to have everyone here feel comfortable and able to speak openly, share their thoughts, ideas and experiences honestly. There are no wrong answers. So please feel free to share your experiences and your point of view, even if it is different from what others have said.

Your comments will be summarized in a report, but nobody here will be identified by name. We will not be using your name when we report the results of the study. Because we are taking notes of this discussion so that we can write our report, it is important for everyone to speak up and that only one person talks at a time.

My role will be to ask questions and listen. It is important for us to hear from all of you because you all have different and valuable experiences. You will be receiving a Walmart card gift for participating in our discussion.

Does anyone have any questions before we begin? If there are no additional questions, we will begin.

FOCUS GROUP DEMOGRAPHIC FORM

Please complete this form. You do not need to answer any question that makes you uncomfortable. If you have any questions, please ask us!

1. What ZIP code do you live in? _____

2. What is your age? (Check only one)

- ☐ 0 – 18 years
- ☐ 19 – 24 years
- ☐ 25 – 44 years
- ☐ 45 – 64 years
- ☐ 65 – 84 years
- ☐ 85+ years

3. What is your gender? (Check only one)

- ☐ Female
- ☐ Male

4. What race do you identify with most? (Check only one)

- ☐ Asian
- ☐ Black or African American
- ☐ Native Hawaiian or Other Pacific Islander
- ☐ American Indian, Alaskan Native, or Indigenous
- ☐ White /Caucasian

5. What ethnicity do you identify with most? (Check only one)

- ☐ Hispanic or Latino
- ☐ Non Hispanic or Non Latino

6. What is the highest grade or year in school you have completed? (Check only one)

- ☐ 6th grade or less
- ☐ Some middle school or some high school, no diploma (grades 7 -11)
- ☐ High school graduate or GED (grade 12)
- ☐ Some college, No degree
- ☐ Associate's degree/Certificate from vocational, business, or trade school
- ☐ 4-years of college or higher, with bachelor's degree or higher
- ☐ Other: _____
- ☐ No answer

7. Do you work now? (Check only one)

- ☐ Work 35 or more hours per week
- ☐ Work less than 35 hours per week
- ☐ Unemployed
- ☐ Other: _____
- ☐ No answer

8. Do you and your family have any kind of health care coverage, private carrier, Medicaid, Medicare, Florida KidCare, or any other (please specify). (Check only one)

- ☐ Yes, please specify: _____
- ☐ No
- ☐ Do not know
- ☐ Prefer not to answer

9. What is your annual household income from all sources, including money from jobs, social security, unemployment benefits, public assistance, and retirement income? (Check only one)

- ☐ \$0 - \$20,000
- ☐ \$20,001 - \$40,000
- ☐ \$40,001 - \$60,000
- ☐ \$60,001 - \$80,000
- ☐ \$80,001 - \$100,000
- ☐ \$100,101 or more
- ☐ Prefer not to answer

Community Health Improvement Plan Implementation
Resident Focus Group Questionnaire**

First Thoughts and Reactions

1. What are your initial thoughts and reaction to the three priority areas (Mental and Behavioral Health, Active Living and Healthy Lifestyles, and Access to Care and Services) identified?

Probes:

- Is there something missing
- Do the goals, objectives, and strategies address community gaps and needs
- What would you like to see added?

Health Issues and Challenges

2. What mental health support services and intervention programs are you aware of in Palm Beach County?

Probes:

- Hotlines to call
- Providers (hospitals, centers, schools)
- Community trainings/workshops
- Screenings

3. Please share what programs you know of in Palm Beach County that provide education and resources to help individuals

Probes (if listing an organization, please share what they do i.e. services provided):

- Eat healthier
- Exercise more
- Initiate breastfeeding
- Prevent mosquito-borne illnesses i.e. Zika
- Seek and receive prenatal care
- Prevent, manage, improve diabetes

4. If you do not know of any programs for these specific health issues/conditions, what would you like to see more of in the community related to these issues/conditions?

Probes:

- Education – what does that look like?
- Outreach – where?
- Services – for whom? Delivered where?

5. What do you think is causing the health issues and conditions we have discussed?

Probes:

- Individual behavior
 - Activities or behaviors of specific groups
 - Dietary behaviors
 - Attitudes and beliefs
 - Cultural or community norms or beliefs in the community around what it means to be “healthy”
 - Stress and anxiety
 - Physical activity, exercise
 - Education

Probes:

- Physical environment
 - Aspects of the built environment
 - Sidewalks
 - Transportation routes
 - Places to engage in activity
 - Lack of places to exercise
 - Access to healthy foods
 - Access to preventative services
 - Access to basic health care
 - Affordability/Health Insurance

Health Care Access and Barriers

6. What are the challenges or barriers you see in maintaining or improving your or your family’s health?

Probes:

- What are the main problems you have faced getting health care services in your neighborhood /community?
- Have you been able to overcome any of these problems? If so, how did you do it?

7. How can these challenges be addressed and solved in a way that will affect you?

Probes:

- Grassroots level change
- In your neighborhood
- In your workplace

Health System

8. What does the community have that helps people to improve or maintain health?
What are some of the community's assets and strengths as related to the health of community residents?

Probes:

- Shifting social and community norms and beliefs
- Public health awareness
- Opportunities to exercise
- Access to fresh produce, healthier diet
- Areas for families to gather
- Sense of community safety
- Access to preventative services
- Access to basic health care
- Access to policy makers and local elected officials

Suggestions and Comments

9. What ideas or suggestions do you have to improve the health of the community?
10. Please share any other comments you have related to the Community Health Improvement Plan or overall health of Palm Beach County.

Palm Beach County Community Health Survey for Residents

In 2016, a Community Health Assessment was completed for Palm Beach County. Community partners and representatives reviewed information and data and had several meetings and conversations to determine the priority areas that would be focused on over the next four years, which ultimately became the Community Health Improvement Plan.

The three priority areas for the 2017-2021 Palm Beach County Community Health Improvement Plan are:

- Mental and Behavioral Health
- Active Living and Healthy Lifestyles
- Access to Care and Services

The purpose of this survey is to understand your thoughts on the Community Health Improvement Plan and how COVID-19 has affected the community's health.

Your responses will remain completely confidential and no identifiers will be reported. We value your time and anticipate the survey should take no more than 10 -15 minutes to complete.

If you are interested in being entered into a raffle for a \$15 gift card, please provide your contact information at the end of the survey.

Demographics

1. In which ZIP Code do you live?

2. How old are you?

- ☐ Under 18
- ☐ 18-24
- ☐ 25-34
- ☐ 35-44
- ☐ 45-54
- ☐ 55-64
- ☐ 65-74
- ☐ 75-84
- ☐ 85 and older
- ☐ I prefer not to answer.

3. Do you think of yourself as:

- ☐ Male
- ☐ Female
- ☐ Transgender man/trans man/female-to-male (FTM)
- ☐ Transgender woman/trans woman/male-to-female (MTF)
- ☐ Genderqueer/gender nonconforming neither exclusively male nor female
- ☐ I prefer not to answer.
- ☐ Other (please specify)

4. Do you think of yourself as:

- ☐ Homosexual (gay or lesbian)
- ☐ Heterosexual (straight)
- ☐ Bisexual
- ☐ Queer, pansexual or questioning
- ☐ Don't know
- ☐ I prefer not to answer.
- ☐ Other (please specify)

5. Are you of Hispanic, Latino, or Spanish origin?

- ☐ Yes
- ☐ No
- ☐ I prefer not to answer.

6. How would you describe yourself? Choose ALL that apply.

- ☐ White
- ☐ Black or African American
- ☐ American Indian and Alaska Native
- ☐ Asian
- ☐ Native Hawaiian and Other Pacific Islander
- ☐ I prefer not to answer.
- ☐ Other (please specify)

7. What is your marital status? Choose one.

- ☐ Single (never married)
- ☐ Married, cohabitating, or in a domestic partnership
- ☐ Separated or Divorced
- ☐ Widowed
- ☐ I prefer not to answer.

8. Which language do you mainly speak at home? Choose one.

- ☐ An Asian language
- ☐ English
- ☐ French
- ☐ Haitian Creole
- ☐ Native or indigenous
- ☐ Spanish
- ☐ Spanish Creole
- ☐ I prefer not to answer.
- ☐ Other (please specify)

9. What is the highest level of school you have completed? Choose one.

- ☐ Less than a high school diploma
- ☐ High school diploma or equivalent, (e.g., GED)
- ☐ Some college, no degree
- ☐ Associate degree (e.g., AA, AS)
- ☐ Bachelor's degree (e.g., BA, BS)
- ☐ Master's degree (e.g., MA, MS, MBA, MEd)
- ☐ Doctorate (e.g., PhD, EdD)
- ☐ Professional degree (e.g., MD, DDS, DVM, JD)
- ☐ Technical school (e.g., HVAC, CNA, welding)
- ☐ I prefer not to answer.
- ☐ Other (please specify)

10. Which of the following best describes your current employment status? Choose one.

- ☐ Full-Time Employed (35 or more hours per week)
- ☐ Part-Time Employed (Less than 35 hours per week)
- ☐ Unemployed and currently looking for work
- ☐ Unemployed and not currently looking for work
- ☐ Self-Employed
- ☐ Homemaker
- ☐ Retired
- ☐ Student
- ☐ Work two or more jobs
- ☐ Unable to work
- ☐ I prefer not to answer.
- ☐ Other (please specify)

11. What is the combined annual income of everyone living in your household? Choose one.

- ☐ Less than \$10,000
- ☐ \$10,000 to \$19,999
- ☐ \$20,000 to \$34,999
- ☐ \$35,000 to \$49,999
- ☐ \$50,000 to \$74,999
- ☐ \$75,000 to \$99,999
- ☐ \$100,000 to \$124,999
- ☐ \$125,000 to \$149,999
- ☐ \$150,000 to \$174,999
