

An Exploration of Obesity and Special Health Care Needs Status in Florida, 2016

Cynthia Norris, MPH

Division of Children's Medical Services
Bureau of Child Protection & Special Technologies

Outline

- Introduction
- Background
- Purpose
- Methods
- Results
- Findings
- Discussion

Introduction

- Obesity
 - Body Mass Index (**BMI**)
- Childhood obesity
 - **Florida ranks 13th** for ages 10-17
 - **17%** nationally
 - Linked to adult obesity and secondary conditions
- Factors
 - Physical activity
 - Diet and nutrition

Introduction

- Children with special health care needs (CSHCNs)/Children and youth with special health care needs (CYSHCNs)
- Nationally **20%** of child population
- Complexity of condition(s)
 - Physical & nutritional limitations

Background

- Special health care needs
 - Higher prevalence of obesity, and lower levels of physical activities (HP 2020)
 - Increased risk of developing secondary conditions
 - Greater needs care and services
- Intellectual disabilities
 - Autism spectrum disorder

Background

- Lower levels of cardio and respirator fitness, less muscular endurance, and higher rates of obesity than children without disabilities
- CYSHCNs are often left out of programs designed to promote healthy weight or nutrition
- Poorer school outcomes
- Measurement of physical activity

Purpose

- Describe the study population
- Explore factors related to obesity
- Explore the prevalence of obesity among children with and without special health care needs

Methods: Data Source

- 2016 National Survey of Children's Health (NSCH)
- Sampling
 - Administered by the US Census Bureau
 - Child randomly select at the household level
- Weighting and Estimation
- Key Variables
 - BMI variable (ages 10-17 only)
 - Special Health Care Needs screener

Methods: Study Design & Analysis

- Cross-sectional, exploratory design
- Secondary data analysis
 - 2016 NSCH - FL households (n=905)
 - STATA SE, version 15
- New Variable
 - New BMI: obese or overweight – Yes/No (n=455)
- Descriptive
 - Frequencies & weighted prevalence estimates

Methods: Selected Survey Variables

Demographics	Physical & Functional Status	Emotional & Mental health	Health Insurance Coverage	Healthcare Access & Quality	Community & School Activities	Family & Activities
Age	Special Health Care Needs Status (SHCN)	Bullied	Consistency of insurance coverage	Preventative medical visit	Participation in organized activities	ACEs
Gender		Bully				Food insufficiency
Race/Ethnicity	Body Mass Index (BMI)		Adequacy of current insurance	Medical home	Safe neighborhood	Time spend watching TV
Household Income		Physical activity				Type of insurance coverage
Family Structure						
Parent Education	Health status					

Results: Child-level demographics

<u>Variable</u>	<u>Unweighted (n)</u>	<u>Weighted %</u>
Obese or overweight		
No	316	63.39%
Yes	139	36.61%
Special health care needs status		
With	134	27.20%
Without	321	72.80%
Age		
10-13 yrs old	206	46.18%
14-17 yrs old	249	53.82%
Sex		
Male	227	49.56%
Female	228	50.44%
Race/Ethnicity		
Hispanic	144	31.72%
White, Non-Hispanic	227	42.50%
Black, non-Hispanic	38	19.09%
Other	46	6.69%

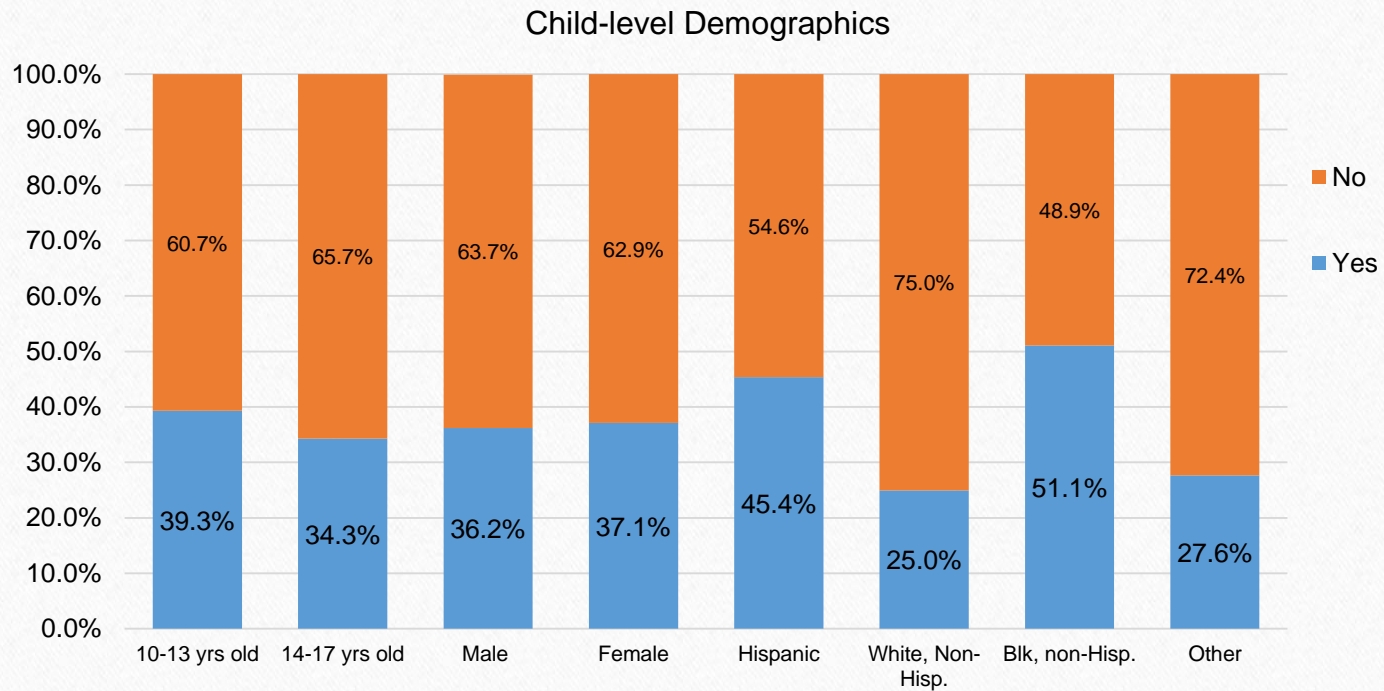

Results: Household-level demographics

<u>Variable</u>	<u>Unweighted (n)</u>	<u>Weighted %</u>
Parent Education*		
less than high school	11	7.9%
high school diploma/GED	59	18.5%
more than high school	380	73.6%
Household Income		
0-99% FPL	132	17.9%
100-199% FPL	74	18.9%
200-399% FPL	58	26.9%
400% FPL or more	191	36.2%
Insurance Type*		
Public	116	37.5%
Private	260	50.5%
Both	9	1.6%
Insured, Other	4	0.1%
Uninsured	35	9.9%
Family Structure *		
two parent, married	303	68.5%
two parent, not currently married	29	6.5%
single mother	88	16.4%
Other family type	34	8.6%
Household Language*		
English	381	88.1%
Other than English	66	11.9%

*Total number is different for characteristics due to missing values

Obesity across indicators

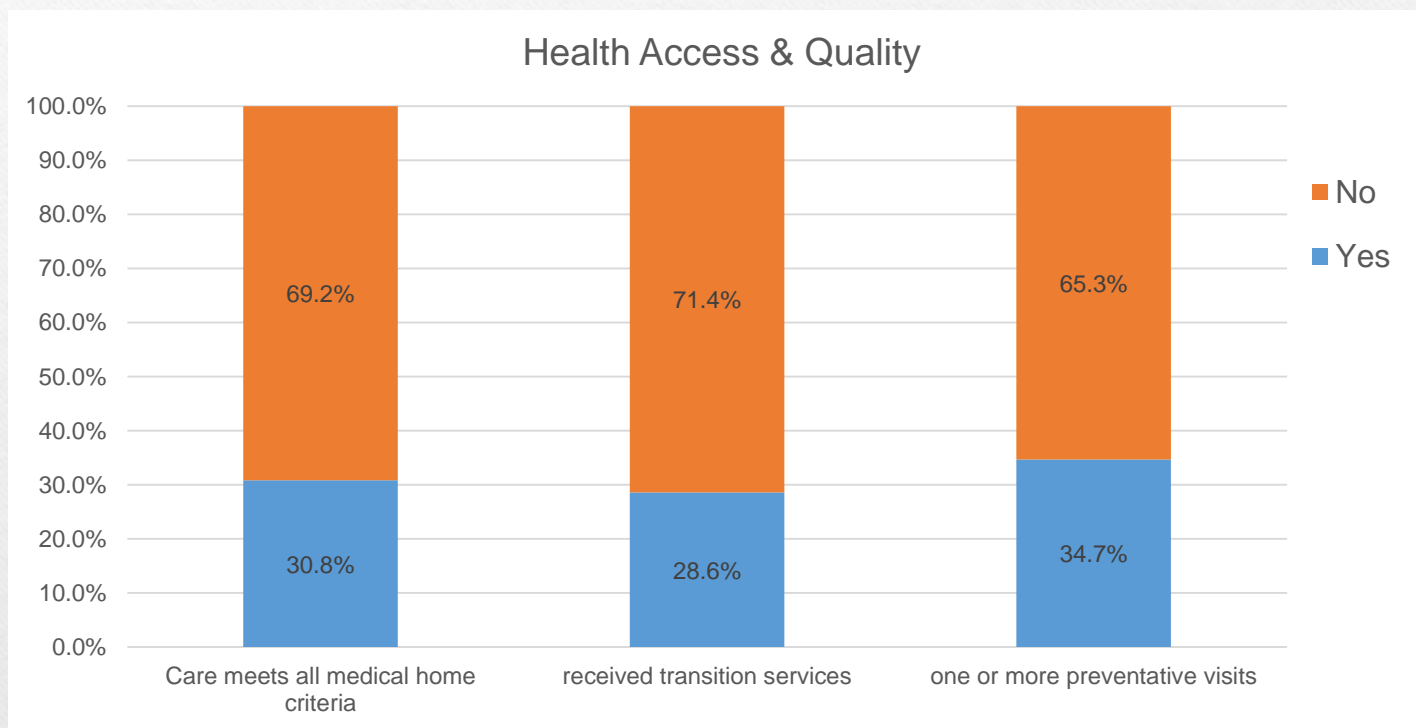

Results:

Special Healthcare Needs & Obesity/Overweight Status

Findings

- Florida's obesity prevalence is higher than national estimates
- Important indicators
 - Physical & function status
 - Health access & quality
 - Community & school activities
 - Family & activities

Findings

- Related child level demographics
 - Ethnicity
- Did not find higher prevalence
 - Emotional and mental health
 - Age
- Higher prevalence of obesity/overweight status with SHCN status

Discussion

- Limitations
 - Sample size
 - Self-reported
 - Measurement of food and nutrition
- Future research
 - Analyze significance of select factors
 - Larger sample

Discussion

- Recommendations
 - Early intervention for those are at-risk
 - Inclusion into public health programming
 - Standard for assessing physical activity
