# Introduction

The Florida Department of Health is pleased to release the 2010 Florida Behavioral Risk Factor Surveillance System (BRFSS) State and County Data Report. This historic surveillance effort would not have been possible without the support of Florida's 67 County Health Departments (CHDs).

The Florida BRFSS has been collecting and reporting health behavior data since 1986. This statewide telephone survey of Florida adults is the only source of state-specific, population-based estimates of the prevalence of various health and health risk behaviors. The purpose of this survey of Florida residents aged 18 and older is to gather information regarding personal health behaviors, selected medical conditions, and the prevalence of preventive health care practices among Florida adults.

The 2010 BRFSS is the third time the county-level survey has been conducted. It was previously conducted in 2002 and 2007. The 2010 county-level survey was developed in collaboration with state and local representatives and better designed to meet the needs of CHD programs by offering options to add county developed questions and increase sample sizes.

Over 35,000 interviews were completed statewide in the 2010 calendar year, with a target sample size of 500 completed surveys in each county.

Brevard County has 554,908 adults in the county, and had 528 adults respond to the 2010 county-level BRFSS survey.

The 2010 BRFSS provides counties and the state with a rich data source to estimate the prevalence of personal health behaviors that contribute to morbidity and mortality among adults in Florida. This report presents the survey data on a variety of issues related to health status, health care access, lifestyle, chronic illnesses, and disease prevention practice.

Because BRFSS respondents are randomly selected, measures of prevalence and mean are subject to random sample errors. Each measure listed in the data tables includes the 95% confidence interval (CI). Measures of prevalence and mean are excluded from the tables for any subpopulation with a sample size less than 30, which would yield statistically unreliable estimates. Available measures from the 2007 county-level survey are included for comparison purposes. The significance of measures with very wide 95% confidence intervals should be interpreted with caution.

The prevalence rates in this report are adjusted, or "weighted" to represent all Florida adults. Weighting is a procedure that adjusts for the chance of an adult being selected to complete the survey and for discrepancies between the adults who completed the survey and the overall population of Florida adults. The data were weighted to the respondent's probability of selection by county as well as age and sex based on 2010 population estimates. Forty-four records were further adjusted during the weighting process.

If any assistance is needed with interpretation or survey methods, please contact the Bureau of Epidemiology at (850) 245-4401.
