Introduction

The Florida Department of Health is pleased to release the 2013 Florida Behavioral Risk Factor Surveillance System (BRFSS) State and County Data. This historic surveillance effort would not have been possible without the support of Florida's 67 County Health Departments (CHDs).

The Florida BRFSS has been collecting and reporting health behavior data since 1986. This statewide telephone survey is the only source of state-specific, population-based estimates of the prevalence of various health conditions and related risk behaviors among Florida residents aged 18 and older. The purpose of this survey is to gather information regarding personal health and risk behaviors, selected medical conditions, and preventive health care practices among Florida adults.

The 2013 BRFSS was the fourth county-level survey conducted. It was previously conducted in 2002, 2007, and 2010. The 2013 county-level survey was developed in collaboration with state and local representatives and better designed to meet the needs of CHD programs by offering options to add county developed questions and increase sample sizes.

Over 34,000 interviews were completed statewide in the 2013 calendar year, with a target sample size of 500 completed surveys in each county.

Charlotte County had approximately 143,091 adult residents in 2013, based on Florida CHARTS, and 461 adults responded to the 2013 county-level BRFSS survey.

The 2013 BRFSS provides counties and the state with a rich data source to estimate the prevalence of personal health behaviors that contribute to morbidity and mortality among adults in Florida. The following data tables present the survey data on a variety of issues related to health status, health care access, lifestyle, chronic illnesses, and disease prevention practice.

Because BRFSS respondents are randomly selected, measures of prevalence and mean are subject to random sample errors. Each measure listed in the data tables includes the 95% confidence interval (CI). If the confidence intervals overlap, there is no statistically significant difference in the prevalence rates. However, if the confidence intervals do not overlap, there is a statistically significant difference. The significance of measures with very wide confidence intervals should be interpreted with caution. Measures of prevalence and mean are excluded from the tables for any subpopulation with a sample size less than 30, which would yield statistically unreliable estimates.

The prevalence rates are adjusted, or "weighted," by the Centers for Disease Control and Prevention (CDC) to represent all Florida adults. Weighting is a procedure that adjusts for the chance of an adult being selected to complete the survey and for discrepancies between the adults who completed the survey and the overall population of Florida adults. The data were weighted to the respondent's probability of selection by county, as well as age, sex, marital status, race/ethnicity, education level, and housing type.

Due to a change in weighting methodology and the inclusion of cellular telephone responses starting in 2011, data from 2013 may not be comparable to data collected before 2011.

If any assistance is needed with interpretation or survey methods, please contact the Bureau of Epidemiology at (850) 245-4401.

County Highlights

Strengths*

- High percentage of adults who received a flu shot in the past year
- High percentage of adults who had a medical checkup in the past year
- High percentage of adults who always or nearly always use a seatbelt when riding in a car

Challenges*

- High percentage of adults who have ever been told they had hypertension
- High percentage of adults who have ever been told they had angina or coronary heart disease
- High percentage of adults who have ever been told they had any other type of cancer except skin cancer
- High percentage of adults who have ever been told they had high blood cholesterol

Selected Indicators**	Percentage (%)	Estimated affected adult population
Adults who are current smokers	21.3	30,533
Adults who are obese	25.9	37,025
Adults who are physically inactive or insufficiently active	46.8	66,897
Adults who have ever been told they had diabetes	16.0	22,845

* These selected strengths and challenges are significantly different compared with overall state data.

** These four selected indicators were used in the America's Health Rankings Report (2013 Edition).

GLOSSARY

A1C	Medical test that sums up how much glucose has been sticking to the hemoglobin molecule in the bloodstream during the past three to four months.
Activities of Daily Living	Usual activities, such as self-care, work, or recreation.
Adult	Individual aged 18 years or older.
Aerobic Recommendations*	Performance of at least 150 minutes of moderate aerobic activity or 75 minutes of vigorous aerobic activity per week in the past 30 days.
Angina	Most common symptom of coronary artery disease (CAD); chest pain or discomfort that occurs if an area of the heart muscle does not get enough oxygen-rich blood.
Arthritis	Joint inflammation; term used in the public health field to describe more than 100 rheumatic diseases and conditions that affect joints, the tissues which surround the joint, and other connective tissue; pattern, severity, and location of symptoms can vary.
Asthma	Disease that affects the lungs; causes repeated episodes of wheezing, breathlessness, chest tightness, and nighttime or early morning coughing.
Binge Drinking*	For women, consumption of 4 or more drinks during a single occasion in the past 30 days; for men, consumption of 5 or more drinks during a single occasion in the past 30 days.
Blood Glucose	Also called blood sugar; refers to the level of glucose, the main sugar the body makes from the food we eat, that is found in the bloodstream.
Blood Pressure	The force of the blood against the artery walls; two levels of blood pressure measured, the highest, or systolic, occurs when the heart pumps blood into the blood vessels, and the lowest, or diastolic, occurs when the heart rests.
Blood Sugar	See Blood Glucose
Body Mass Index (BMI)	Body Mass Index (BMI) is a number calculated from a person's height and weight; provides a reliable indicator of body fatness for most people; used to screen for weight categories that may lead to health problems.
Cancer	General name for a group of diseases; when cells in a part of the body begin to grow out of control, forming new, abnormal cells and sometimes invading (growing into) other tissues.
Cholesterol	A substance the body uses to produce hormones, vitamin D, and food-digesting acids. Too much cholesterol in the blood over an extended period can increase the risk of coronary heart disease, heart attack, or angina.
Chronic Bronchitis	A long-term condition in which the airways that carry air to the lungs become inflamed and produce too much mucus, making it difficult to get air into and out of the lungs.
Chronic Diseases	Diseases of long duration and generally slow progression (e.g., heart disease; stroke; cancer; diabetes); represent the leading causes of mortality worldwide.
Chronic Obstructive Pulmonary Disease (COPD)	Term that refers to a group of diseases that cause airflow blockage and breathing-related problems, including emphysema and chronic bronchitis.
Coronary Heart Disease (CHD)	See Coronary Artery Disease (CAD)
Current Smoker*	Combination of everyday smoker and some day smoker.

*This term is defined using BRFSS standards.
