2007 Florida Behavioral Risk Factor Surveillance System Data Report

Completed Surveys: 39,549
2007 State Adult Population: 12,336,038
Non-Hispanic White Adults: 9,366,640
Hispanic Adults: 2,696,320

The Florida Department of Health is pleased to release the 2007 Florida Behavioral Risk Factor Surveillance System (BRFSS) Data Report, Supplemental Report Number 2. This report focuses on examining differences in state-level estimates among the non-Hispanic white and Hispanic adult populations. Each of the 71 indicators is presented by sex, age group, education level, income level, and marital status among these two populations. Statistically significant differences between the two groups based on 95% confidence intervals are noted using an asterisk (*). Please see the note concerning data suppression criteria below.

These data are the result of an historic surveillance effort that would not have been possible without the support of Florida's 67 county health departments (CHD). The 2007 county-level BRFSS is the first since the initial county-level effort in 2002. The survey was developed in collaboration with state and local representatives and was better designed to meet the needs of CHD programs by offering options to add county-developed questions and to increase sample sizes. In addition, 2007 county-level questionnaires included all of the questions asked on the state-level survey, unlike 2002, in which an abbreviated questionnaire was administered.

The 2007 county-level BRFSS provides counties and the state with a rich data source to estimate the prevalence of personal health behaviors that contribute to morbidity and mortality among adults in Florida. This report presents the survey data on a variety of issues related to health status, health care access, lifestyle, chronic illnesses, and disease prevention practices among non-Hispanic whites and Hispanics. These data can be used to: (1) determine priority health issues and identify populations at highest risk for illness, disability, and death; (2) plan and evaluate prevention programs; (3) educate the community and policy makers about disease prevention; and (4) support community policies that promote health and prevent disease.

Because BRFSS respondents are randomly selected, measures of prevalence and mean are subject to random sample errors. Each measure listed in the data tables includes the 95% confidence interval (CI). Measures of prevalence and mean are excluded from the tables for any subpopulation with a sample size less than 30, which would yield statistically unreliable estimates.

If any assistance is needed with data interpretation or survey methods, please contact the Bureau of Epidemiology, Chronic Disease Epidemiology Section at (850) 245-4401.
