Introduction

The Florida Youth Risk Behavior Survey (YRBS) is a self-administered, school-based anonymous survey that has been conducted in Florida public high schools every two years since 1991. It is part of a national survey effort led by the Centers for Disease Control and Prevention (CDC) to monitor priority health risk behaviors that contribute markedly to the leading causes of death, disability, and social problems among youth in the United States. In 2007, 4,523 students in 69 public high schools in Florida completed the YRBS. The overall response rate was 61 percent. Since 2001, the response rate has been high enough for the data to be weighted to represent all Florida public high school students.

Had sufficient physical activity*

In 2007, approximately 298,100 students (38.4%) met the current recommendation of being physically active for a total of 60 minutes per day on five or more of the past seven days. This prevalence increased significantly by 25.5% from 2005 to 2007. Males (51.0%) had a significantly higher prevalence of this behavior than females (25.8%).

Exercised to strengthen or tone muscles

In 2007, approximately 318,500 students (46.3%) did exercises to strengthen or tone their muscles, such as push-ups, sit-ups, or weight lifting, on three or more of the past seven days. This prevalence did not change significantly from 2001 to 2007. Males had a significantly higher prevalence of this behavior than females during this time period.

Watched television (TV)

In 2007, approximately 311,700 students (40.2%) watched three or more hours per day of TV on an average school day. This prevalence decreased slightly from 2001 to 2007. Males (40.6%) had a slightly higher prevalence of this behavior than females (39.7%).
Enrolled in physical education one or more days in an average school week
In 2007, approximately 291,700 students (37.7%) attended physical education (PE) classes on one or more days in an average school week. This prevalence did not change significantly from 2001 to 2007. Males had a significantly higher prevalence of this behavior than females during this time period.

Exercised more than 20 minutes in an average physical education class
Among students enrolled in PE class in 2007, approximately 202,700 students (79.7%) actually exercised or played sports for more than 20 minutes during an average PE class. This prevalence remained the same from 2001 to 2007. Males had a significantly higher prevalence of this behavior than females during this time period.

Played on one or more sports teams during the past 12 months
In 2007, approximately 386,200 students (49.8%) played on one or more sports teams during the past 12 months. This prevalence remained at the same level from 2001 to 2007. Males had a significantly higher prevalence of this behavior than females during this time period.
