Introduction
The Florida Youth Risk Behavior Survey (YRBS) is a self-administered, school-based anonymous survey that has been conducted in Florida public high schools every two years since 1991. It is part of a national survey effort led by the Centers for Disease Control and Prevention (CDC) to monitor priority health risk behaviors that contribute markedly to the leading causes of death, disability, and social problems among youth in the United States. In 2011, 6,212 students in 78 public high schools in Florida completed the YRBS. The overall response rate was 75%. Since 2001, the response rate has been high enough for the data to be weighted to represent all Florida public high school students.

**Had sufficient physical activity**
In 2011, approximately 330,700 students (43.6%) met the current recommendation of being physically active for a total of 60 minutes per day on five or more of the past seven days. This prevalence increased significantly by 42.5% from 2005 to 2011. Males had a significantly higher prevalence of this behavior than females from 2005 to 2011.

**Exercised to strengthen or tone muscles**
In 2011, approximately 377,300 students (49.8%) did exercises to strengthen or tone their muscles, such as push-ups, sit-ups, or weight lifting, on three or more of the past seven days. This prevalence increased significantly by 7.1% from 2001 to 2011. Males consistently had a significantly higher prevalence of this behavior than females.

**Watched television (TV)**
In 2011, approximately 280,600 students (37.1%) watched three or more hours per day of TV on an average school day. This prevalence decreased significantly by 17.4% from 2001 to 2011. The prevalence of this behavior did not vary significantly by gender, 2001 to 2011.
Enrolled in physical education one or more days in an average school week
In 2011, approximately 328,500 students (43.5%) attended physical education (PE) classes on one or more days in an average school week. This prevalence did not change significantly from 2001 to 2011. Males consistently had a significantly higher prevalence of this behavior than females.

Exercised more than 20 minutes in an average physical education class
Among students enrolled in PE class in 2011, approximately 254,600 (77.7%) actually exercised or played sports for more than 20 minutes during an average PE class. This prevalence did not change significantly from 2001 to 2011. Males consistently had a significantly higher prevalence of this behavior than females.

Played on one or more sports teams during the past 12 months
In 2011, approximately 388,900 students (51.4%) played on one or more sports teams during the past 12 months. This prevalence remained at the same level from 2001 to 2011. Males consistently had a significantly higher prevalence of this behavior than females.

For more information about the YRBS, please contact the Chronic Disease Epidemiology Surveillance and Evaluation Section at (850) 245-4401, by e-mail at ChronicDisease@doh.state.fl.us, or visit our website at: http://www.FloridaChronicDisease.org/YRBS/Intro.htm. For an interactive database of YRBS data, visit the CDC’s YRBS web site at: www.cdc.gov/yrbs. This document was developed by the Bureau of Epidemiology for the Florida Department of Education’s Office of Healthy Schools in Cooperation with the U.S. Centers for Disease Control and Prevention, Division of Adolescent and School Health Project Number U87/CCU001239-02.
