

## Florida Arbovirus Surveillance Week 2: January 6-12, 2019

Arbovirus surveillance in Florida includes endemic mosquito-borne viruses such as West Nile virus (WNV), Eastern equine encephalitis virus (EEEV), and St. Louis encephalitis virus (SLEV), as well as exotic viruses such as dengue virus (DENV), chikungunya virus (CHIKV) and California encephalitis group viruses (CEV). Malaria, a parasitic mosquito-borne disease is also included. During the period of January 6-12, 2019, the following arboviral activity was recorded in Florida.

[This report contains information for 2018 and 2019.](#)

**WNV activity:** Two human cases of WNV infection was reported this week in Duval and Sumter counties. No horses with WNV infection were reported this week. Eleven sentinel chickens tested positive for antibodies to WNV this week in Brevard, Charlotte, Hillsborough, Indian River, Leon, Palm Beach, and Sarasota counties. In 2019, there have been no positive samples reported. In 2018, positive samples from 35 humans, three blood donors, thirteen horses, one zebra, one red-shouldered hawk, five crows, 31 mosquito pools, and 833 sentinel chickens have been reported from 40 counties.

**SLEV activity:** No human cases of SLEV infection were reported this week. No sentinel chickens tested positive for antibodies to SLEV this week. In 2018, a positive sample from one sentinel chicken has been reported from one county.

**EEEV activity:** No human cases of EEEV infection were reported this week. No horses with EEEV infection were reported this week. No sentinel chickens tested positive for antibodies to EEEV this week. In 2018, positive samples from three humans, 52 horses, one mule, one donkey, one owl, two emus, five emu flocks, three mosquito pools, and 154 sentinel chickens have been reported from 33 counties.

**International Travel-Associated Dengue Fever Cases:** Four cases of dengue fever were reported this week in persons that had international travel. In 2018, 83 travel-associated cases have been reported.

**Dengue Fever Cases Acquired in Florida:** No cases of locally acquired dengue fever were report this week. In 2018, one case of locally acquired dengue fever has been reported.

**International Travel-Associated Chikungunya Fever Cases:** One case of chikungunya fever with onset in 2019 was reported this week in a person that had international travel. In 2019, one travel-associated case has been reported. In 2018, five travel-associated cases have been reported.

**Chikungunya Fever Cases Acquired in Florida:** No cases of locally acquired chikungunya fever were reported this week. In 2018, no cases of locally acquired chikungunya fever have been reported.

**International Travel-Associated Zika Fever Cases:** One case of Zika fever was reported this week in a person that had international travel. In 2018, 99 cases have been reported.

**Zika Fever Cases Acquired in Florida:** No cases of locally acquired Zika fever were reported this week. In 2018, no cases of locally acquired Zika fever have been reported.

**Advisories/Alerts:** Gadsden, Lake, Manatee, Martin, Miami-Dade, Sumter, Suwannee, and Washington counties are currently under a mosquito-borne illness advisory. Bay, Duval, Leon, Levy, and Nassau counties are currently under a mosquito-borne illness alert. No other counties are currently under mosquito-borne illness advisory or alert.

There are no areas of ongoing, active Zika transmission in Florida. For additional information on current CDC recommendations, please visit [www.cdc.gov/zika/intheus/florida-update.html](http://www.cdc.gov/zika/intheus/florida-update.html). For additional information on Zika virus cases from 2016 or 2017, including up-to-date numbers, please visit <https://zikafreefl.org/>.

There is a Level 2 (Alert) Travel Health Notice from the CDC for multiple countries in Africa, the Caribbean, Central and South America, India, Southeast Asia, and Pacific Islands related to Zika virus transmission and an association with poor pregnancy outcomes. Pregnant women should consider postponing travel to these areas. There is a Level 1 (Watch) Travel Health Notice in Senegal related to dengue virus transmission. There is also a Level 2 Travel Health Notice for Brazil and a Level 1 Travel Health Notice in Nigeria related to the transmission of yellow fever virus. Additional information on travel health notices can be found at the following link: [wwwnc.cdc.gov/travel/notices](http://wwwnc.cdc.gov/travel/notices). **2018-2019 Human Case Summary\***

**West Nile Virus Illnesses Acquired in Florida:** A total of 35 human cases of WNV illness acquired in Florida have been reported in 2018; four in Bay (July, September), one in Charlotte (August), two in Clay (September, October), 13 in Duval (August, September, October, November), one in Escambia (November), four in Leon (October), one in Manatee (July), four in Nassau (August, September, October), one in Putnam (October), one in Sumter (December), one in Suwannee (August), one in Taylor (October), and one in Washington (October) counties. Three asymptomatic positive blood donors were reported from Bay (June), Duval (August), and Gadsden (October) counties.

**EEEV Infection Acquired in Florida:** Three human cases of Eastern equine encephalitis acquired in Florida have been reported in 2018 in Columbia (July), Taylor (May), and Volusia (July) counties.

**International Travel-Associated Chikungunya Fever Cases:** One case of chikungunya fever with onset in 2019 has been reported in an individual with travel history to a chikungunya endemic country in the two weeks prior to onset. Country of origin was: Thailand. The county reporting the case was: Palm Beach.

Five cases of chikungunya fever with onset in 2018 have been reported in individuals with travel history to a chikungunya endemic country in the two weeks prior to onset. Countries of origin were: Brazil (2), India (2), and Kenya. Counties reporting the case were: Broward, Miami-Dade, Orange, Palm Beach, and Seminole.

**International Travel-Associated Dengue Fever Cases:** Eighty-three cases of dengue fever with onset in 2018 have been reported in individuals with travel history to a dengue endemic country in the two weeks prior to onset. Countries of origin were: Bangladesh, Colombia, Cuba (52), Haiti (15), India (2), Jamaica (2), Mexico (2), Nigeria, Philippines, Thailand, and Venezuela (5). Counties reporting cases were: Broward (10), Charlotte, Citrus, Duval (4), Hillsborough (6), Lake, Lee (3), Manatee, Miami-Dade (46), Monroe (2), Orange (4), and Palm Beach (4). Two cases were reported in non-Florida residents. Four cases met the criteria for severe dengue (dengue shock syndrome [DSS] or dengue hemorrhagic fever [DHF]). Those at greater risk for DSS and DHF include persons with previous dengue infection, pregnant women, infants, the elderly, and those with co-morbidities. However, severe illness can also occur in those without any of these risk factors. In 2018, 68 cases of dengue reported in Florida have been serotyped by PCR. Additional serotyping and strain typing are being conducted.

**Dengue Fever Cases Acquired in Florida:** In 2018, one case of locally acquired dengue fever has been reported in Miami-Dade County, with onset in October.

**International Travel-Associated Zika Fever Cases:** In 2018, 99 cases of Zika fever have been reported in individuals with travel history to a country or area experiencing Zika virus activity. Countries of origin were: Brazil (3), Brazil/Haiti, Brazil/Mexico, Colombia, Cuba (23), Cuba/Mexico, Dominica, Dominican Republic (2), Guatemala (2), Guatemala/Mexico, Haiti (36), Honduras (8), Jamaica (2), Nicaragua, Puerto Rico, Turks and Caicos, and Venezuela (14). Counties reporting cases were: Broward (7), Charlotte, Collier (35), Hernando, Hillsborough, Lee, Manatee, Miami-Dade (28), Orange (11), Osceola (3), Palm Beach (7), Pinellas, Seminole, and Walton. Nineteen cases were reported in non-Florida residents. Florida is monitoring a total of 74 pregnant women in 2018.

In addition, two individuals tested in 2018 reported travel in 2016 to both Miami-Dade County and countries with areas of active Zika virus transmission. Exposure location in 2016 could not definitively be determined.

**International Travel-Associated Malaria Cases:** Sixty-seven cases of malaria with onset in 2018 have been reported. Countries of origin were: Afghanistan (2), Africa, Angola, Benin (2), Brazil, Cameroon, Dominican Republic, Ethiopia, Gabon, Ghana (5), Guyana, Haiti (2), India (5), Kenya, Liberia (3), Mali/Togo, Nicaragua (4), Nigeria (22), Peru, Sierra Leone (3), South Africa, Sudan, Tanzania, Togo (3), and Venezuela (2). Counties reporting cases were: Broward (16), Clay, Duval (6), Escambia, Gadsden, Hillsborough (5), Miami-Dade (15), Okaloosa, Orange (4), Osceola, Palm Beach (4), Pasco, Pinellas (3), Polk, Sarasota, Seminole (5), and Volusia. Eleven cases were reported in non-Florida residents.

Forty-three cases (64%) were diagnosed with *Plasmodium falciparum*. Seventeen cases (25%) were diagnosed with *Plasmodium vivax*. Five cases (8%) were diagnosed with *Plasmodium ovale*. Two cases (3%) were diagnosed with *Plasmodium malariae*.

### Veterinary Cases\*

\*Veterinary cases are reported by date of onset. Only mammalian veterinary cases are included in the graphs.

No horses with EEEV or WNV infection were reported this week.

### Sentinel Chickens\*

The table below is for the reporting of confirmatory laboratory results from this week. Some of the samples were collected at earlier dates. The date of collection is recorded for samples collected on that day along with the total number of positives and the corresponding seroconversion rate for the week the sample was collected.

Eleven sentinel chickens tested positive for antibodies to WNV this week in Brevard, Charlotte, Hillsborough, Indian River, Leon, Palm Beach, and Sarasota counties.

## Dead Birds

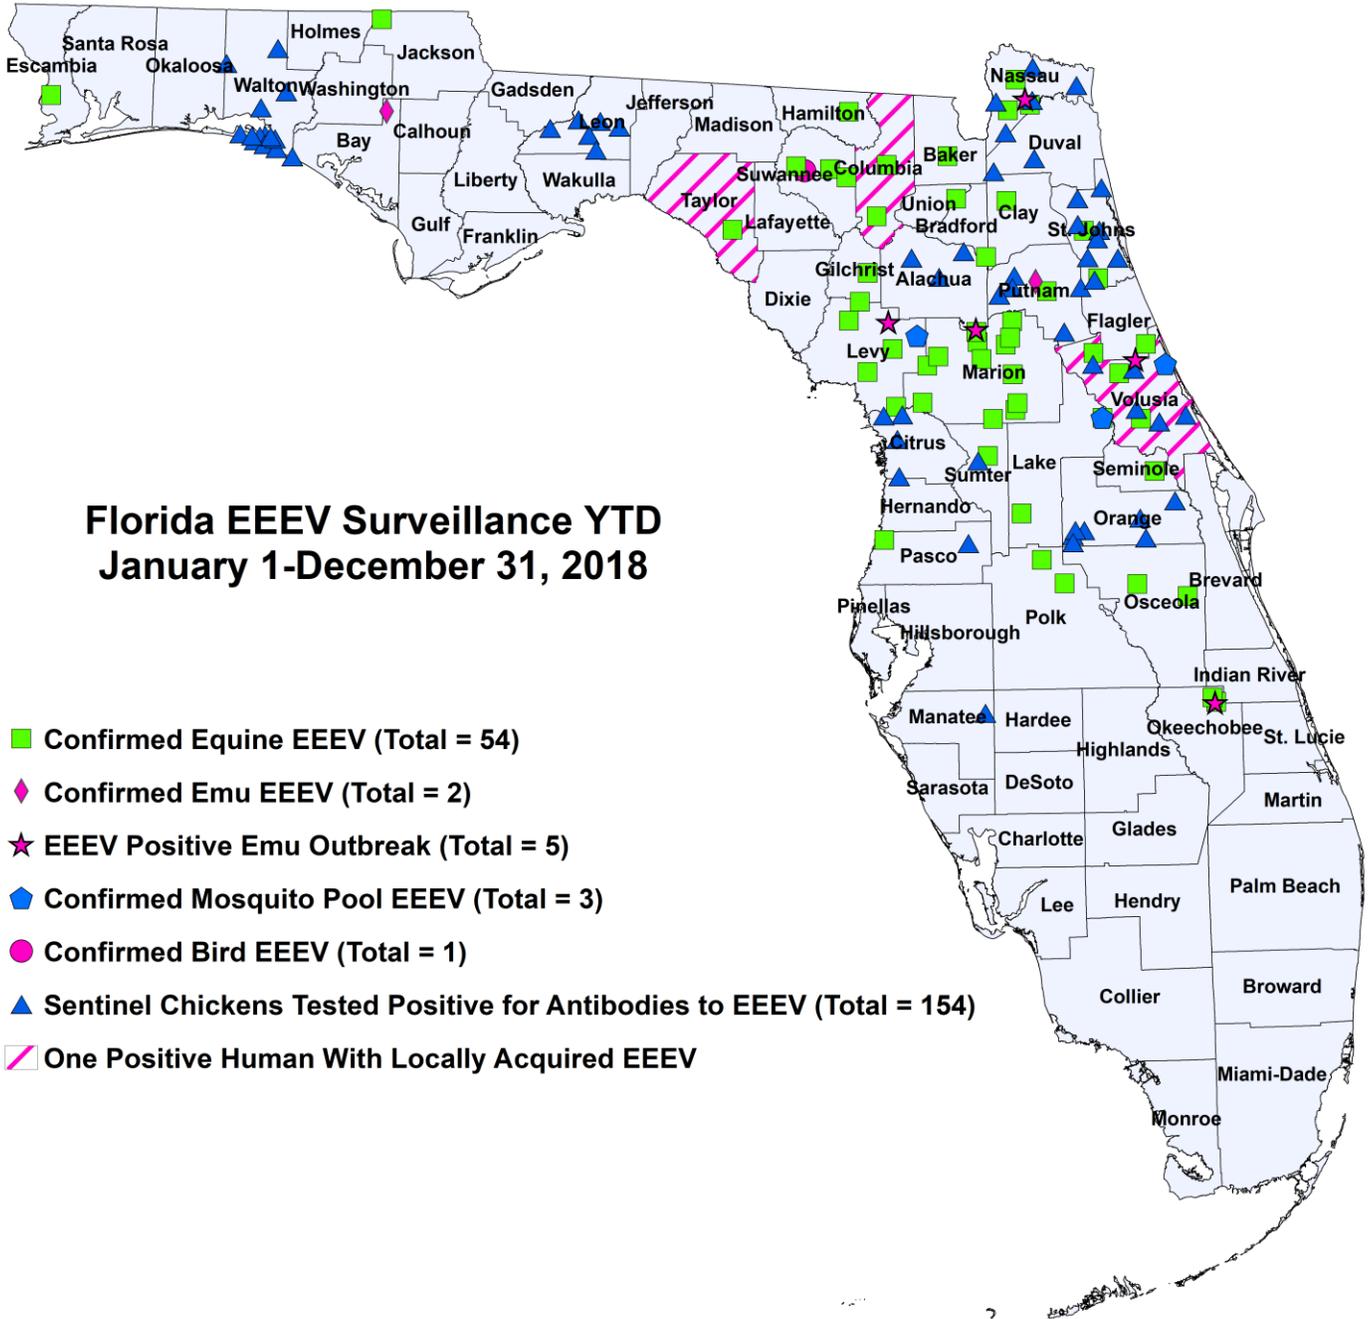

The Fish and Wildlife Conservation Commission (FWC) collects reports of dead birds, which can be an indication of arbovirus circulation in an area. This week, 11 reports representing a total of 12 dead birds, including two raptors, were received from ten counties.

In 2019, 21 reports representing a total of 28 dead birds were received from 16 of Florida's 67 counties. Please note that FWC collects reports of birds that have died from a variety of causes, not only arboviruses. Dead birds should be reported to [www.myfwc.com/bird/](http://www.myfwc.com/bird/).

Case tallies included in the weekly Florida arbovirus surveillance report include confirmed and probable cases for EEE, WNV infection, SLE, dengue, chikungunya, and malaria by date of onset. Suspect cases are not included. Activity is mapped by county of exposure rather than county of residence. Case definitions being used in Florida are consistent with national criteria provided by the Council of State and Territorial Epidemiologists (CSTE) and may be viewed at: [www.floridahealth.gov/diseases-and-conditions/disease-reporting-and-management/disease-reporting-and-surveillance/index.html](http://www.floridahealth.gov/diseases-and-conditions/disease-reporting-and-management/disease-reporting-and-surveillance/index.html). Case tallies reported by CDC do not include suspect cases and cases are reported by patient state of residence rather than where the exposure occurred. Data is provided by county health departments, Department of Health Bureau of Public Health Laboratories, Department of Agriculture and Consumer Services, mosquito control agencies, Florida Fish and Wildlife Conservation Commission, medical providers and veterinarians. Equine cases are provided by the Department of Agriculture and Consumer Services.
