

Florida Arbovirus Surveillance Week 45: November 3-9, 2019

Arbovirus surveillance in Florida includes endemic mosquito-borne viruses such as West Nile virus (WNV), Eastern equine encephalitis virus (EEEV), and St. Louis encephalitis virus (SLEV), as well as exotic viruses such as dengue virus (DENV), chikungunya virus (CHIKV), Zika virus (ZIKV), and California encephalitis group viruses (CEV). Malaria, a parasitic mosquito-borne disease is also included. During the period of November 3-9, 2019, the following arboviral activity was recorded in Florida.

WNV activity: No human cases of WNV infection were reported this week. No horses with WNV infection were reported this week. Forty sentinel chickens tested positive for antibodies to WNV this week in Brevard, Charlotte, Citrus, Duval, Hillsborough, Indian River, Lee, Martin, Nassau, Orange, Palm Beach, Pasco, Polk, St. Johns, and Walton counties. In 2019, positive samples from one human, one blood donor, nine horses, one eagle, and 634 sentinel chickens have been reported from 31 counties.

SLEV activity: No human cases of SLEV infection were reported this week. No sentinel chickens tested positive for antibodies to SLEV this week. In 2019, positive samples from three sentinel chickens have been reported from three counties.

EEEV activity: No human cases of EEEV infection were reported this week. No horses with EEEV infection were reported this week. No sentinel chickens tested positive for antibodies to EEEV this week. In 2019, positive samples from 28 horses, one emu, one eagle, and 110 sentinel chickens have been reported from 31 counties.

International Travel-Associated Dengue Fever Cases: Sixteen cases of dengue fever were reported this week in persons that had international travel. In 2019, 341 travel-associated cases have been reported.

Dengue Fever Cases Acquired in Florida: No cases of locally acquired dengue fever were reported this week. In 2019, 12 cases of locally acquired dengue fever have been reported.

International Travel-Associated Chikungunya Fever Cases: No cases of chikungunya fever were reported this week in persons that had international travel. In 2019, seven travel-associated cases have been reported.

Chikungunya Fever Cases Acquired in Florida: No cases of locally acquired chikungunya fever were reported this week. In 2019, no cases of locally acquired chikungunya fever have been reported.

International Travel-Associated Zika Fever Cases: No cases of Zika fever were reported this week in persons that had international travel. In 2019, 36 travel-associated cases have been reported.

Zika Fever Cases Acquired in Florida: No cases of locally acquired Zika fever were reported this week. In 2019, no cases of locally acquired Zika fever have been reported.

Advisories/Alerts: Bay, Broward, Calhoun, Citrus, DeSoto, Duval, Hillsborough, Holmes, Indian River, Lee, Orange, Polk, St. Johns, Suwannee, Volusia, and Walton counties are currently under a mosquito-borne illness advisory. Miami-Dade County is currently under a mosquito-borne illness alert. No other counties are currently under mosquito-borne illness advisory or alert.

There is a Level 2 Travel Health Notice for Nigeria related to the transmission of yellow fever virus. There are also Level 1 Travel Health Notices for Central and South America, Mexico, the Caribbean, Asia, the Pacific Islands, Africa, the Middle East, France, and Spain related to the transmission of dengue virus, for Burundi related to malaria transmission, and for Ethiopia related to chikungunya transmission. Additional information on

travel health notices can be found at the following link: wwwnc.cdc.gov/travel/notices. For a map of arboviral disease activity in the United States visit: www.cdc.gov/arbovet/maps/ADB_Diseases_Map/index.html.

2019 Human Case Summary*

West Nile Virus Illnesses Acquired in Florida: One human case of WNV illness acquired in Florida has been reported in 2019 in Duval County (July). One asymptomatic positive blood donor has been reported in 2019 from Bay County (August).

International Travel-Associated Chikungunya Fever Cases: Seven cases of chikungunya fever with onset in 2019 have been reported in individuals with travel history to a chikungunya endemic country in the two weeks prior to onset. Countries of origin were: Brazil, Haiti, India (3), and Thailand (2). Counties reporting cases were: Alachua, Manatee, Marion, Miami-Dade (2), Orange, and Palm Beach. Two cases were reported in non-Florida residents.

International Travel-Associated Dengue Fever Cases: Three hundred forty-one cases of dengue fever with onset in 2019 have been reported in individuals with travel history to a dengue endemic country in the two weeks prior to onset. Counties reporting cases were: Alachua (2), Brevard (2), Broward (35), Charlotte, Citrus, Collier (3), Duval (5), Hillsborough (21), Lake, Lee (11), Manatee (2), Marion, Miami-Dade (199), Orange (13), Osceola (3), Palm Beach (24), Pasco (3), Pinellas (2), Polk, Putnam, Sarasota (2), Seminole (3), St. Lucie (4), and Volusia. Nineteen cases were reported in non-Florida residents. Eight cases met the criteria for severe dengue (dengue shock syndrome [DSS] or dengue hemorrhagic fever [DHF]). Those at greater risk for DSS and DHF include persons with previous dengue infection, pregnant women, infants, the elderly, and those with co-morbidities. However, severe illness can also occur in those without any of these risk factors. In 2019, 284 cases of dengue reported in Florida have been serotyped by PCR.* Please see the below table for a breakdown of cases by country of origin and serotype.

Dengue Fever Cases Acquired in Florida: In 2019, 12 cases of locally acquired dengue fever have been reported in Broward, Hillsborough, and Miami-Dade (10) counties, with onsets in March, July (2), August (3), and September (6).

International Travel-Associated Zika Fever Cases: In 2019, 36 cases of Zika fever have been reported in individuals with travel history to a country or area experiencing Zika virus activity. Countries of origin were: Brazil, Colombia (1), Cuba (6), Guatemala (5), Haiti (11), Honduras (4), Jamaica, Nicaragua, Philippines, Puerto Rico, and Venezuela (3). Counties reporting cases were: Broward (5), Collier (3), Duval, Hillsborough (2), Indian River, Lee, Miami-Dade (17), Orange (4), Palm Beach, and Sarasota. Three cases were reported in non-Florida residents. Florida is monitoring a total of 23 pregnant women in 2019.

International Travel-Associated Malaria Cases: Fifty-six cases of malaria with onset in 2019 have been reported. Countries of origin were: Afghanistan, Angola (3), Central African Republic, Chad, Congo, Democratic Republic of the Congo (4), Ghana (7), Guyana, India (2), Ivory Coast (6), Kenya (3), Liberia (3), Nigeria (14), Papua New Guinea, Sudan, Togo, Uganda (2), Venezuela, and Zambia (3). Counties reporting cases were: Brevard (2), Broward (5), Duval (9), Hillsborough (4), Lake (2), Manatee, Miami-Dade (9), Okaloosa, Orange (7), Pasco (4), Pinellas (5), Polk (3), Seminole (3), and Volusia. Sixteen cases were reported in non-Florida residents.

Forty-seven cases (84%) were diagnosed with *Plasmodium falciparum*. Six cases (10%) were diagnosed with *Plasmodium vivax*. Two cases (4%) were diagnosed with *Plasmodium ovale*. One case (2%) was diagnosed with *Plasmodium malariae*.

Veterinary Cases*

*Veterinary cases are reported by date of onset. Only mammalian veterinary cases are included in the graphs.

No horses with EEEV or WNV infection were reported this week.

Sentinel Chickens*

The table below is for the reporting of confirmatory laboratory results from this week. Some of the samples were collected at earlier dates. The date of collection is recorded for samples collected on that day along with the total number of positives and the corresponding seroconversion rate for the week the sample was collected.

Forty sentinel chickens tested positive for antibodies to WNV this week in Brevard, Charlotte, Citrus, Duval, Hillsborough, Indian River, Lee, Martin, Nassau, Orange, Palm Beach, Pasco, Polk, St. Johns, and Walton counties.

Dead Birds

The Fish and Wildlife Conservation Commission (FWC) collects reports of dead birds, which can be an indication of arbovirus circulation in an area. This week, 12 reports representing a total of 26 dead birds, including one jay, one raptor, and one dove, were received from five counties.

In 2019, 336 reports representing a total of 694 dead birds (14 crows, 14 jays, 81 raptors, and 36 doves) were received from 44 of Florida's 67 counties. Please note that FWC collects reports of birds that have died from a variety of causes, not only arboviruses. Dead birds should be reported to www.myfwc.com/bird/.

Case tallies included in the weekly Florida arbovirus surveillance report include confirmed and probable cases for EEE, WNV infection, SLE, dengue, chikungunya, and malaria by date of onset. Suspect cases are not included. Activity is mapped by county of exposure rather than county of residence. Case definitions being used in Florida are consistent with national criteria provided by the Council of State and Territorial Epidemiologists (CSTE) and may be viewed at: www.floridahealth.gov/diseases-and-conditions/disease-reporting-and-management/disease-reporting-and-surveillance/index.html. Case tallies reported by CDC do not include suspect cases and cases are reported by patient state of residence rather than where the exposure occurred. Data is provided by county health departments, Department of Health Bureau of Public Health Laboratories, Department of Agriculture and Consumer Services, mosquito control agencies, Florida Fish and Wildlife Conservation Commission, medical providers and veterinarians. Equine cases are provided by the Department of Agriculture and Consumer Services.
