

Florida Arbovirus Surveillance

Week 52: December 21 - 27, 2014

Arbovirus surveillance in Florida includes endemic mosquito-borne viruses such as West Nile virus (WNV), Eastern equine encephalitis virus (EEEV), and St. Louis encephalitis virus (SLEV), as well as exotic viruses such as dengue virus (DENV), chikungunya virus (CHIKV) and California encephalitis group viruses (CEV). Malaria, a non-viral mosquito-borne disease is also included. During the period of December 21-27, 2014 the following arboviral activity was recorded in Florida.

WNV activity: One asymptomatic blood donor was identified as WNV positive in Polk County. No horses with WNV infection were reported this week. No sentinel chickens tested positive for antibodies to WNV this week. In 2014, positive samples from 338 sentinel chickens, 5 horses, 15 human cases, and 3 asymptomatic blood donors have been received from 31 counties.

SLEV activity: No human cases of SLE were reported this week. No sentinel chickens tested positive for antibodies to SLEV this week. In 2014, positive samples from 2 human cases and 106 sentinel chickens have been received from 13 counties.

EEEV activity: No human cases of EEE were reported this week. No horses with EEEV infection were reported this week. No sentinel chickens tested positive for antibodies to EEEV this week. In 2014, positive samples from 173 sentinel chickens, 2 deer, and 58 horses have been received from 32 counties.

International Travel-Associated Dengue Fever Cases: No new cases of dengue fever were reported this week in persons that had international travel. In 2014, 80 travel-associated cases have been reported.

Dengue Fever Cases Acquired in Florida: No new cases of locally acquired dengue fever were reported this week. In 2014, a total of six cases of locally acquired dengue fever have been reported.

International Travel-Associated Chikungunya Fever Cases: Nine cases of chikungunya fever were reported this week in persons that had international travel. In 2014, 437 travel-associated cases have been reported.

Chikungunya Fever Cases Acquired in Florida: No new cases of locally acquired chikungunya fever were reported this week. In 2014, a total of 11 cases of locally acquired chikungunya fever have been reported.

Advisories/Alerts: Columbia, Flagler, Marion, Polk, and St. Johns Counties are currently under a mosquito-borne illness advisory. No other counties are currently under mosquito-borne illness advisory or alert. A CDC Health Alert Network (HAN) health advisory was issued in December for the Caribbean region announcing the first locally acquired cases of chikungunya fever in the Americas. There is a Level 1 (Watch) Travel Health Notice from the CDC for multiple countries in the Caribbean related to the continued transmission of chikungunya which was updated October 21, 2014.

2014 Human Case Summary*

West Nile Virus Illnesses Acquired in Florida: A total of fifteen human cases of WNV illness acquired in Florida have been reported in 2014; one in Alachua (August), one in Clay (October), three in Escambia (July, August, September), two in Duval (August, September), one in Leon (August), one in Marion (October), one in Pasco (August), one in Polk (September) and four in Volusia (August, September) Counties. Three asymptomatic positive blood donors were reported from Polk (November), Santa Rosa (July) and St. Johns (September) Counties.

International Travel-Associated Dengue Fever Cases: Eighty cases of dengue with onset in 2014 have been reported in individuals with travel history to a dengue endemic country in the two weeks prior to onset. Countries of origin were: Bangladesh, Bolivia, Brazil (2), Caribbean, Columbia, Costa Rica (5), Cuba (27), Cuba/Bahamas, Dominican Republic (9), El Salvador (2), Guadeloupe, Guatemala, Guyana, Haiti (4), Honduras (7), Jamaica (2), Mexico (3), Puerto Rico (6), Sri Lanka, Trinidad, and Venezuela (3). Counties reporting cases were: Alachua, Brevard (2), Broward (7), Clay, Collier, Highlands, Hillsborough (5), Lee, Manatee (2), Marion, Miami-Dade (37), Orange (4), Osceola (6), Palm Beach (5), Pinellas, Seminole (2), St. Lucie (2), and Volusia. Seven of the cases were reported in non-Florida residents. In 2014, 35 of the 80 cases of dengue reported in Florida have been serotyped by PCR. Additional serotyping and strain typing are being conducted.

	# of cases per serotype – 2014
DENV-1	12
DENV-2	12
DENV-3	3
DENV-4	7
DEN-1&2	1

Dengue Fever Cases Acquired in Florida: In 2014, a total of six cases of locally acquired dengue fever have been reported. Six cases of dengue in Miami-Dade residents with onset in June, August, and September have been reported as acquired in Miami-Dade County.

International Travel-Associated Chikungunya Fever Cases: Four hundred and thirty-seven cases of chikungunya with onset in 2014 have been reported in individuals with travel history to a chikungunya endemic country or area experiencing an outbreak in the two weeks prior to onset. Countries of origin were: Antigua (2), Antigua/Barbuda, Barbados, Bequia, Colombia (3), Cuba (7), Dominica/Guadalupe, Dominican Republic (88), El Salvador (6), Grenada, Guatemala, Guyana (10), Haiti (107), Haiti/Dominican Republic, Honduras (2), India, Indonesia, Jamaica (63), Martinique (2), Nicaragua (2), Philippines, Puerto Rico (115), Puerto Rico/Dominican Republic (2), South America, St. Lucia (2), St. Thomas/St. Martin/Bahamas (2), St. Vincent and the Grenadines, Trinidad (2), Trinidad/Tobago (2), Venezuela (3), and Virgin Islands (5). Counties reporting cases were: Alachua (2), Brevard (4), Broward (80), Charlotte (3), Clay (2), Collier (2), Duval (10), Escambia (2), Flagler, Hernando (3), Highlands, Hillsborough (36), Indian River (2), Lake (5), Lee (16), Leon (2), Manatee (3), Marion, Miami-Dade (79), Monroe, Nassau, Okaloosa (2), Orange (55), Osceola (19), Palm Beach (44), Pasco (4), Pinellas (11), Polk (23), Santa Rosa, Sarasota (3), Seminole (9), St. Johns (2), St. Lucie (3), Volusia (4), and Walton. Thirty-two of the cases were reported in non-Florida residents.

Chikungunya Fever Cases Acquired in Florida: In 2014, a total of eleven cases of locally acquired chikungunya fever have been reported. One case of chikungunya fever with onset in July was acquired in Broward County. Two cases of chikungunya fever with onset in June were acquired in Miami-Dade County. Four cases of chikungunya fever with onset in July were acquired in Palm Beach County. Four cases of chikungunya fever with onset in July and August were acquired in St. Lucie County.

International Travel-Associated Malaria Cases: Sixty-one cases of malaria with onset in 2014 have been reported. Countries of origin were: Angola (3), Cameroon, Dominican Republic, East Africa,

Equatorial Guinea (2), Ghana (3), Ghana/Rwanda, Ghana/Senegal, Ghana/Togo, Guatemala, Guyana, Haiti, Honduras, India (9), Ivory Coast (3), Kenya (3), Liberia, Nigeria (11), Nigeria/Ethiopia, Papua New Guinea, Peru (2), Sierra Leone (5), Sudan, Togo, Uganda (2), and multiple sub-Saharan African countries (3). Counties reporting cases were: Broward (8), Clay, Duval (3), Escambia, Hernando, Hillsborough (10), Leon, Miami-Dade (13), Okaloosa (2), Orange (7), Osceola (2), Palm Beach (5), Pasco, Pinellas (3), Santa Rosa, Seminole, and Volusia. Sixteen of the cases were reported in non-Florida residents.

Forty-three cases (70%) were diagnosed with *Plasmodium falciparum*. Thirteen cases (21%) were diagnosed with *Plasmodium vivax*. Two cases (3%) were diagnosed with *Plasmodium malariae*. Three cases (5%) were diagnosed with *Plasmodium ovale*.

Veterinary Cases*

*Veterinary cases are reported by date of onset

No horses with EEEV or WNV infection were reported this week

Sentinel Chickens

The table below is for the reporting of confirmatory laboratory results from this week. Some of the samples were collected at earlier dates. The date of collection is recorded for samples collected on that day along with the total number of positives and the corresponding seroconversion rate for the week the sample was collected.

One sentinel chicken tested positive for antibodies to HJV this week in Walton County (state total of 72 positives for 2014).

County	Collection Date	Seroconversion Rates (%)						County Totals

**Case tallies included in the weekly Florida arbovirus surveillance report include confirmed and probable cases for EEE, WNV infection, SLE, dengue, and malaria by date of onset. Suspect cases are not included. Activity is mapped by county of exposure rather than county of residence. Case definitions being used in Florida are consistent with national criteria provided by the Council of State and Territorial Epidemiologists (CSTE) and may be viewed at: <http://www.floridahealth.gov/diseases-and-conditions/disease-reporting-and-management/disease-reporting-and-surveillance/index.html>

Case tallies reported by CDC do not include suspect cases and cases are reported by patient state of residence rather than where the exposure occurred. Data is provided by county health departments, Department of Health Bureau of Public Health Laboratories, Department of Agriculture and Consumer Services, mosquito control agencies, Florida Fish and Wildlife Conservation Commission, medical providers and veterinarians. Equine cases are provided by the Department of Agriculture and Consumer Services.
