

## Week 48: November 27– December 3, 2011

### Summary

The Florida Department of Health (FDOH) monitors multiple surveillance systems such as the Electronic Surveillance System for the Early Notification of Community-based Epidemics (ESSENCE), the Florida Pneumonia and Influenza Mortality Surveillance System (FPIMSS), notifiable disease reports (Merlin), EpiCom, and Florida ILINet in order to track influenza activity in the state.

**National:**

- Influenza and ILI are at low levels nationwide according to Centers for Disease Control and Prevention (CDC) reports. Using Florida ILINet data, CDC calculated minimal ILI intensity for Florida in week 47.

**State:**

- Influenza and ILI activity in Florida is low in all FDOH surveillance systems. One county reports moderate activity; no counties report widespread activity. Nine counties report that influenza activity is increasing, and five report decreasing influenza activity.
- ESSENCE and ILINet ILI activity levels are near previous non-pandemic seasons at this time in most regions of Florida.
- In week 48, three specimens tested PCR-positive for influenza at the state lab—two for 2009 H1N1 influenza A, and one for influenza A unspecified. In recent weeks, the overall number of specimens submitted and the percent positive for influenza have been low. Other viruses known to be currently circulating, potentially causing ILI, include adenovirus, rhinovirus, parainfluenza, and respiratory syncytial virus (RSV).
- No outbreaks of ILI or influenza were reported in week 48.

**Weekly state influenza activity: Sporadic**

Florida is currently reporting Sporadic influenza activity statewide, due to low activity levels in all regions of Florida as shown in our influenza surveillance systems. This activity level represents the statewide spread of influenza, and is not a measure of flu intensity.

**Pediatric influenza Mortality**

No pediatric influenza mortalities were reported in week 48. There have been no influenza-associated pediatric mortalities-associated deaths among those less than 18 years old are reportable in Florida.

**TABLE 1: Summary of Florida Influenza-Like Illness (ILI) Activity for Week 48**

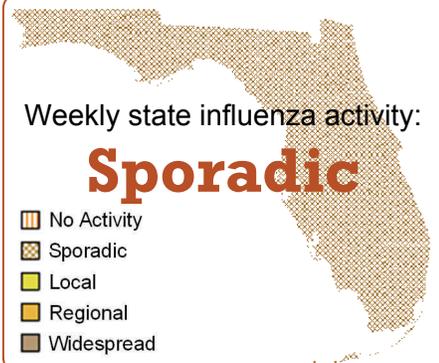

Measure	Difference from previous week	Current week 48	Previous week 47	Page of Report
Overall statewide activity code reported to CDC	No Change	Sporadic	Sporadic	1
Percent of visits to ILINet providers for ILI	▼ 0.5	1.2%	1.7%	2
Percent of emergency department visits (from ESSENCE) due to ILI	▲ 0.2	2.2%	2.0%	3
Percent of laboratory specimens that were positive for influenza	▲ 4.2	7.7%	3.5%	5
Number of counties reporting moderate influenza activity	▲ 1	1	0	6
Number of counties reporting widespread influenza activity	No Change	0	0	6
Number of counties reporting increasing influenza activity	▼ 2	9	11	7
Number of counties reporting decreasing influenza activity	▲ 1	5	4	7
Number of ILI outbreaks reported in EpiCom	No Change	0	0	10

- NREVSS Respiratory Virus Surveillance 10
- Influenza and ILI outbreaks reported in EpiCom 10
- Pediatric Influenza-Associated Mortality 10

ILINet is a nationwide surveillance system composed of sentinel providers. Florida has 110 providers enrolled in ILINet who submit weekly ILI and total visit counts, as well as submitting ILI specimens to the BOL for confirmatory testing. For this season, BOE has designated 16 of these ILINet physicians' offices as Super-Sentinels. These Super-Sentinels will receive more active follow-up from BOE and participating county health departments, with the goal of increasing data quality and surveillance specimen submission. Complete lab and visit data from Florida ILINet Super-Sentinels will be presented in the Florida Flu Review in future weeks.

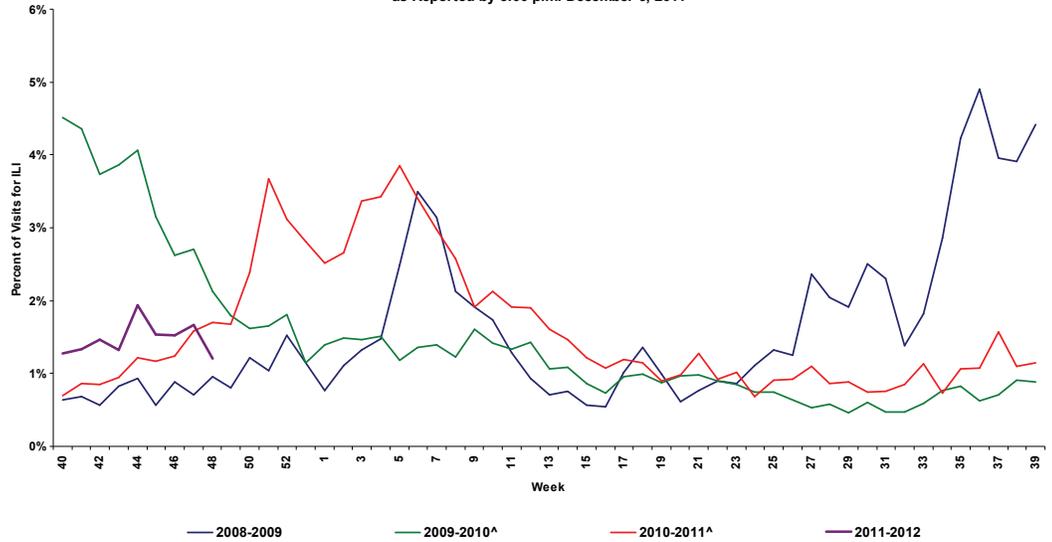

**FIGURE 1** shows the percentage of visits for ILI\* reported by ILINet Sentinel Providers statewide.

ILI percent remains low and close to other non-pandemic seasons at this time.

**71 of 110 ILINet Sentinels have reported visit counts as of 5:00 p.m., December 6, 2011.**

**13 of 16 ILINet Super-Sentinels have reported visit counts as of 5:00 p.m., December 6, 2011.**

**FIGURE 1: Percentage of Visits for Influenza-Like Illness\* Reported by ILINet Sentinel Providers Statewide, 2008-2009 (Weeks 40-39), 2009-2010 (Weeks 40-39), 2010-2011 (Week 40-39), and 2011-2012 (Weeks 40-48) as Reported by 5:00 p.m. December 6, 2011**

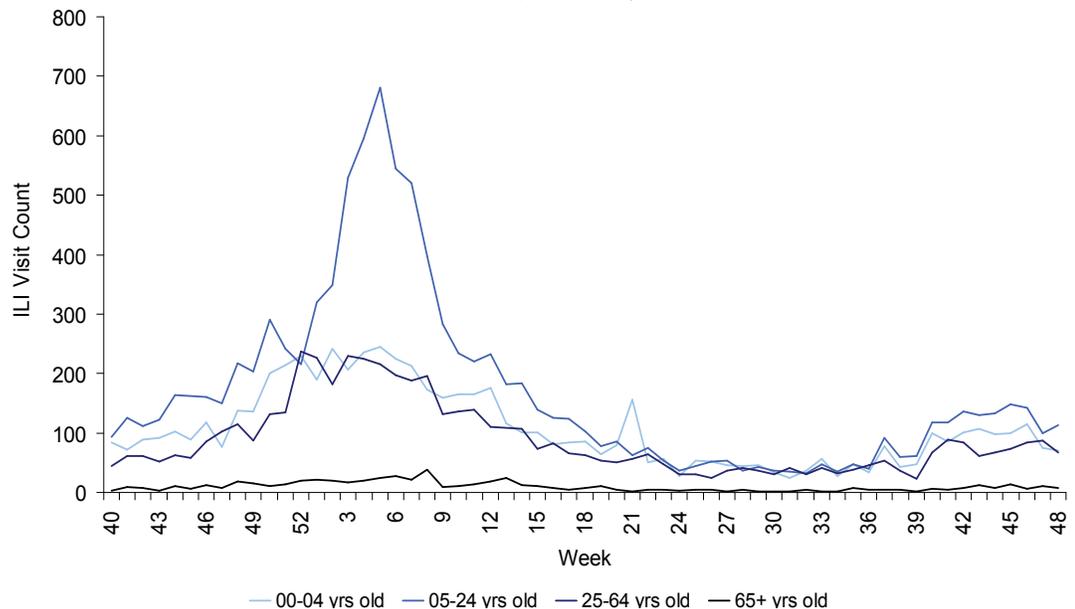

\*ILI = Influenza-like illness, fever >100°F AND sore throat and/or cough *in the absence* of another known cause.  
 ^There is no week 53 during the 2009-2010, 2010-2011, and 2011-12 seasons; the week 53 data point for those seasons is an average of weeks 52 and 1.

**FIGURE 2** shows ILI visit counts reported by ILINet sentinel providers statewide by age group.

ILI visit counts are at low levels in all age groups

**FIGURE 2: Influenza-like Illness (ILI) Visit Counts Reported by ILINet Sentinel Providers Statewide by Age Group Week 40, 2010-Week 48, 2011 as Reported to ILINet by 5:00 p.m. December 6, 2011**

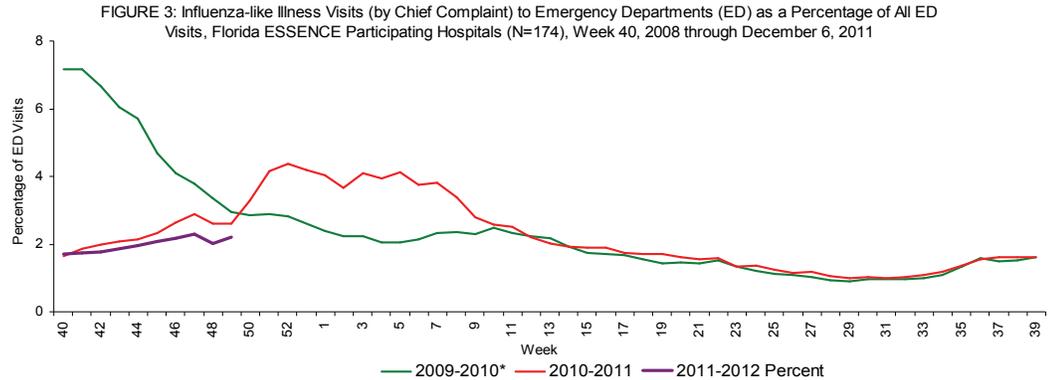

†Data presented here are counts, not proportions as included in Figure 2. This is because age group denominator data is not available through ILINet.

Florida uses ESSENCE for syndromic surveillance, which currently collects data daily from 174 hospital emergency departments (ED). These data are processed into 11 different syndrome categories based on the patient's chief complaint. One of the categories is ILI, which is composed of chief complaints that include the words "influenza" or "flu," or complaints that contain fever plus cough and/or sore throat.

**FIGURE 3** shows ESSENCE data on ILI visits to EDs as a percentage of all ED Visits.

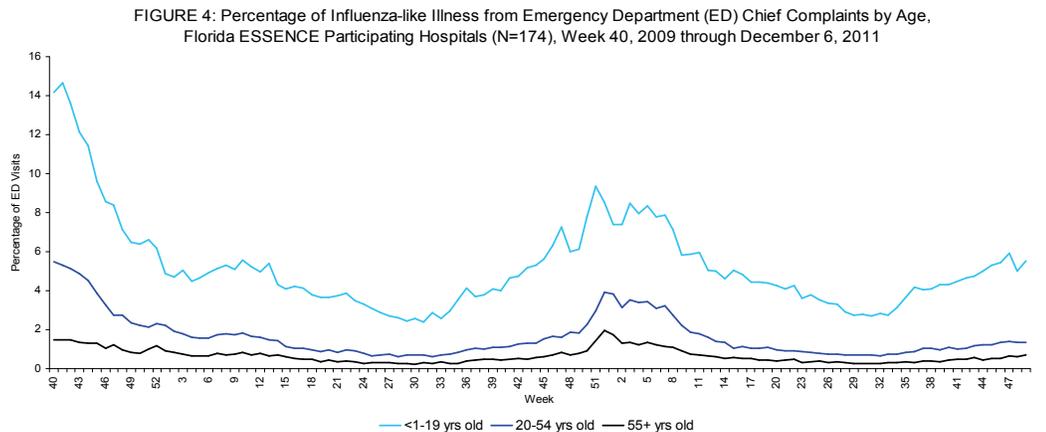

Overall activity for influenza-like illness reported in ESSENCE is similar to levels seen during the same time period in non-pandemic years.

\*There is no week 53 for the 2007-2008, 2009-2010, and 2010-2011 seasons; the week 53 data point for those seasons is an average of weeks 52 and 1.

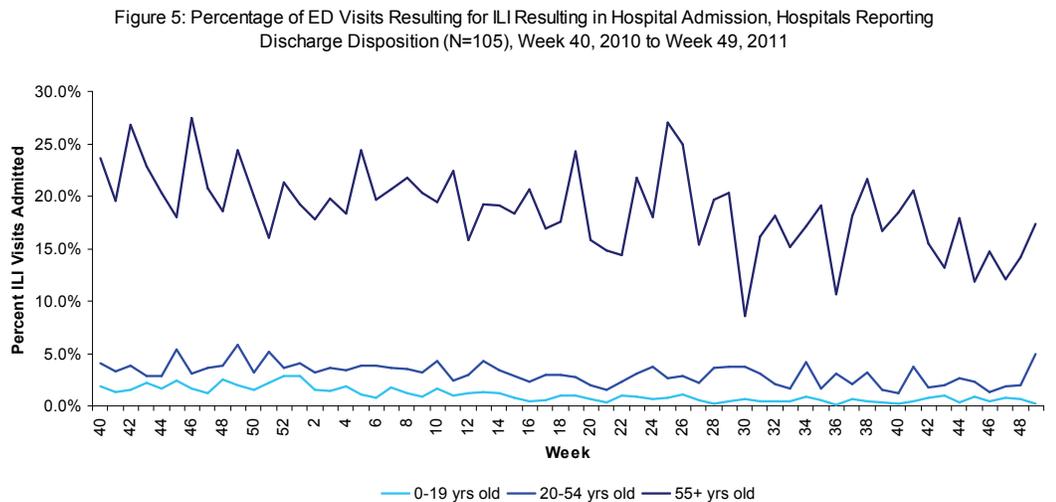

**FIGURE 4** shows percentage of ILI among all ED visits by age group.

Age-specific trends show ILI increasing in all age groups

One hundred five ESSENCE participating facilities are able to provide discharge disposition data for their ED visits going back to week 40, 2010. Using this information, the percent of ED visits for ILI that result in hospitalization can be calculated. The highest percentage of admissions is in the 55+ years old age group. The low number of visits in the 55+ age group causes variability in the ILI admission percentage from week to week.

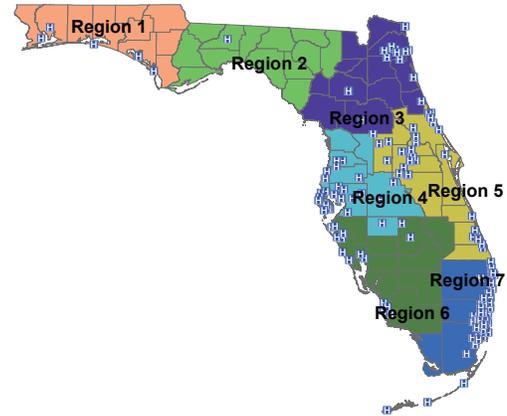

**FIGURE 5** shows the percentage of ED visits for ILI that resulted in hospitalization, by age group

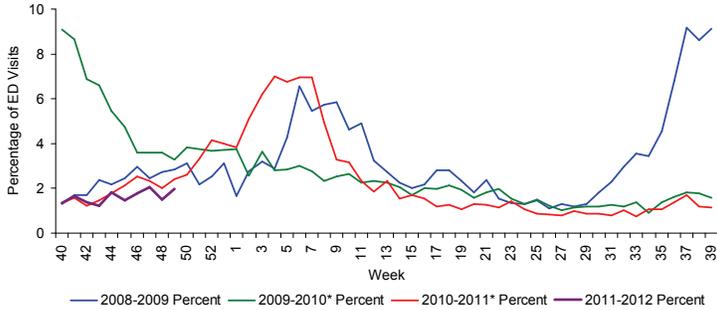

**FIGURE 6 - FIGURE 12** describe ED chief complaint data from ESSENCE by Regional Domestic Security Task Force (RDSTF).

ILI activity in ESSENCE is at low levels in all RDSTF regions, and ILI is at levels similar to those seen in previous non-pandemic influenza seasons at this time.

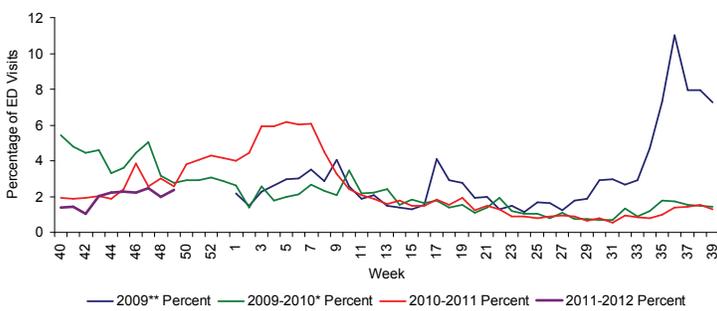

Map 2: Hospitals Reporting Emergency Department (ED) Data to Florida ESSENCE, December 6, 2011 (N=174)

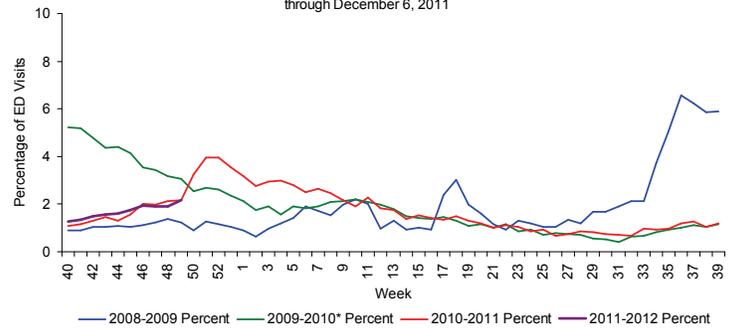

**FIGURE 6:** Percentage of Influenza-Like Illness from Emergency Department (ED) Chief Complaints, RDSTF Region 1 ESSENCE Participating Hospitals (N=5), Week 40, 2008 through December 6, 2011

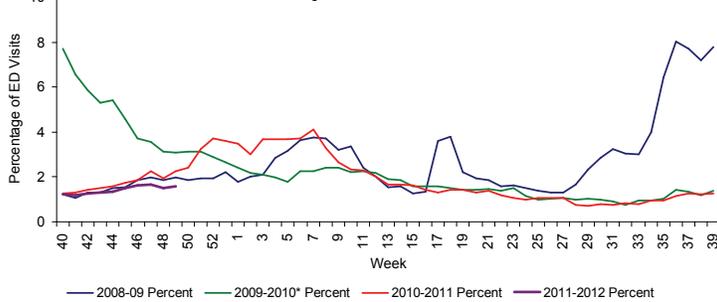

**FIGURE 7:** Percentage of Influenza-Like Illness from Emergency Department (ED) Chief Complaints, RDSTF Region 2 ESSENCE Participating Hospitals (N=2), Week 1, 2009 through December 6, 2011

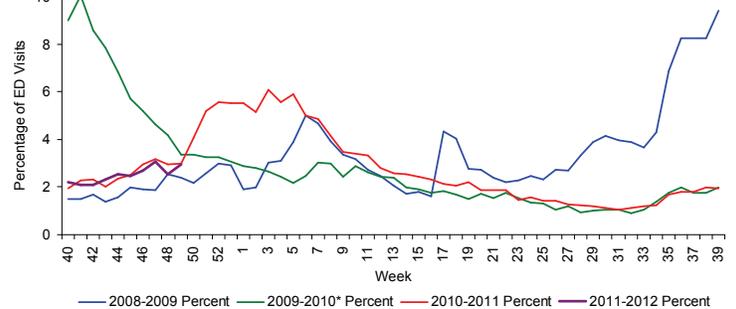

**FIGURE 8:** Percentage of Influenza-Like Illness from Emergency Department (ED) Chief Complaints, RDSTF Region 3 ESSENCE Participating Hospitals (N=14), Week 40, 2008 through December 6, 2011

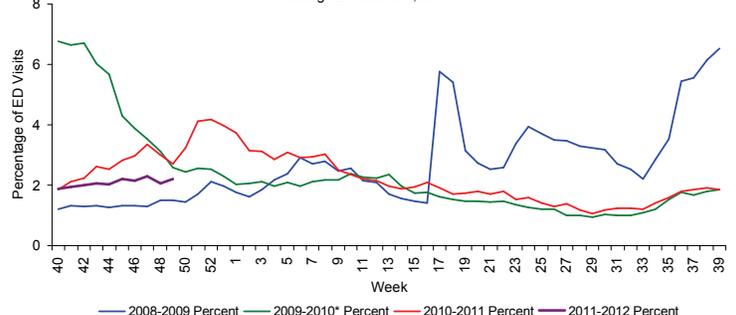

**FIGURE 10:** Percentage of Influenza-Like Illness from Emergency Department (ED) Chief Complaints, RDSTF Region 5 ESSENCE Participating Hospitals (N=49), Week 40, 2008 through December 6, 2011

**FIGURE 11:** Percentage of Influenza-Like Illness from Emergency Department (ED) Chief Complaints, RDSTF Region 6 ESSENCE Participating Hospitals (N=15), Week 40, 2008 through December 6, 2011

**FIGURE 12:** Percentage of Influenza-Like Illness from Emergency Department (ED) Chief Complaints, RDSTF Region 7 ESSENCE Participating Hospitals (N=48), Week 40, 2008 through December 6, 2011

**Table 2** shows the number of specimens tested by the Bureau of Laboratories (BOL), how many are influenza positive, and how many are H1N1 or other influenza subtypes.

**FIGURE 13 - FIGURE 14** use BOL viral surveillance data to track the progress of influenza infection over time. They include weekly information on how many specimens are tested by the BOL, what proportion of those test positive for influenza, and what subtypes are found for the positive influenza specimens.

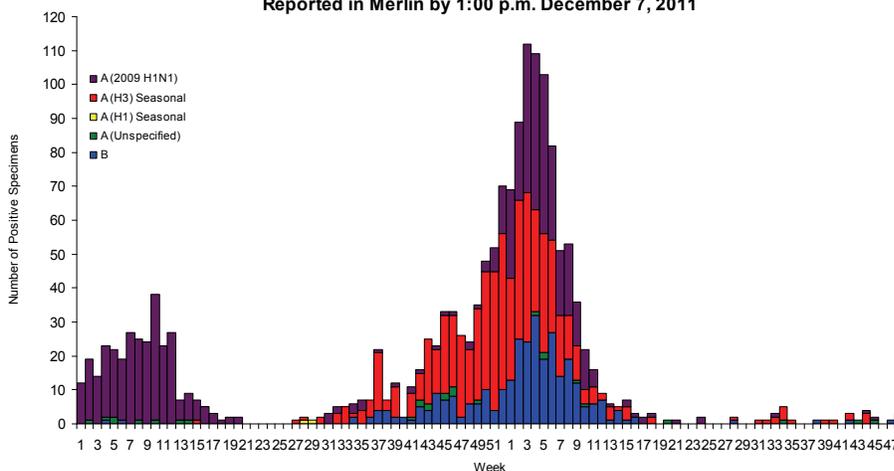

**In the summer months, small numbers of influenza specimens submitted to BOL tested positive. Specimens tested positive for influenza A H3, 2009 H1N1, and influenza B.**

No one strain of influenza is currently predominant in Florida.

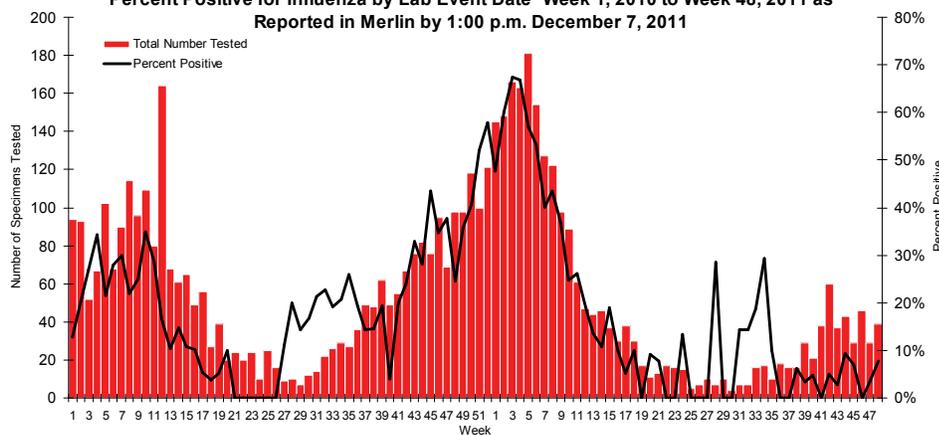

**Table 2: Bureau of Laboratories Viral Surveillance for Week 48 by Lab Event Date\* as reported by 1:00 p.m. December 7, 2011**

	Current Week 48	Previous Week 47
<b>Total Specimens Tested</b>	<b>39</b>	<b>29</b>
Influenza Positive Specimens (% of total)	3 (7.7%)	1 (3.5%)
H1N1 Positive Specimens (% of influenza positives)	2 (66.7%)	-
H3 Influenza A	-	-
Influenza A Unspecified	1 (33.3%)	-
Influenza B Unspecified	-	1 (100.0%)

**FIGURE 13: Number of Influenza-Positive Specimens Tested by the Florida Bureau of Laboratories (BOL) by Subtype by Lab Event Date\* Week 1, 2010 to Week 48, 2011 as Reported in Merlin by 1:00 p.m. December 7, 2011**

**FIGURE 14: Number of Specimens Tested by Florida Bureau of Laboratories (BOL) and Percent Positive for Influenza by Lab Event Date\* Week 1, 2010 to Week 48, 2011 as Reported in Merlin by 1:00 p.m. December 7, 2011**

\*Please note that lab event date is defined as the earliest of the following dates associated with the lab: date collected, date received by the laboratory, date reported, or date inserted.

For county-specific laboratory data, please refer to the Flu Lab Report in Merlin.

For instructions on how to use the Flu Lab Report, please see the Guide to Flu Lab Report on the Bureau of Epidemiology website: [http://www.doh.state.fl.us/disease\\_ctrl/epi/htopics/flu/FluLabReportGuide.pdf](http://www.doh.state.fl.us/disease_ctrl/epi/htopics/flu/FluLabReportGuide.pdf)

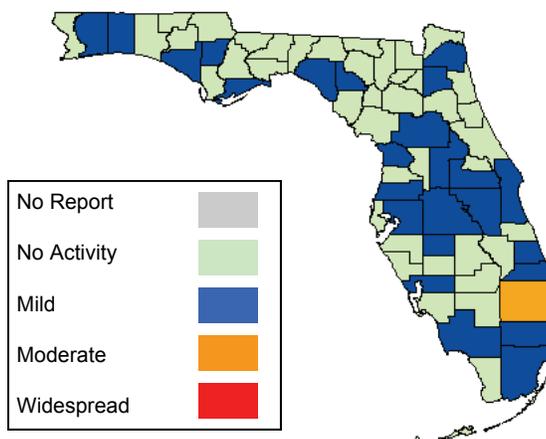

As of 11:00 a.m. December 7, 2011 a total of 67 (100%) counties had reported their weekly level of influenza activity. We have achieved 100% reporting for the this week due to enhanced follow-up with counties. *Please note that data reported by counties after the deadline Tuesday at 5 p.m. are recorded but may not be included in the activity map for previous weeks.*

**TABLE 3: Weekly County Influenza Activity for Week 48 (ending December 3, 2011) as Reported by 11:00 a.m. December 7, 2011**

Activity Level	Week 47 Number of Counties	Week 48 Number of Counties	Week 48 Counties
No Report	0	0	-
No Activity	45	41	Alachua, Baker, Bradford, Columbia, Desoto, Dixie, Escambia, Flagler, Gadsden, Gilchrist, Glades, Gulf, Hamilton, Hendry, Hernando, Highlands, Holmes, Indian River, Jackson, Jefferson, Lee, Leon, Levy, Liberty, Madison, Manatee, Monroe, Nassau, Okeechobee, Pinellas, Putnam, Sarasota, Seminole, St. Johns, Sumter, Suwannee, Union, Volusia, Wakulla, Walton, Washington
Mild	22	25	Bay, Brevard, Broward, Calhoun, Charlotte, Citrus, Clay, Collier, Dade, Duval, Franklin, Hardee, Hillsborough, Lafayette, Lake, Marion, Martin, Okaloosa, Orange, Osceola, Pasco, Polk, Santa Rosa, St. Lucie, Taylor
Moderate	0	1	Palm Beach
Widespread	0	0	-

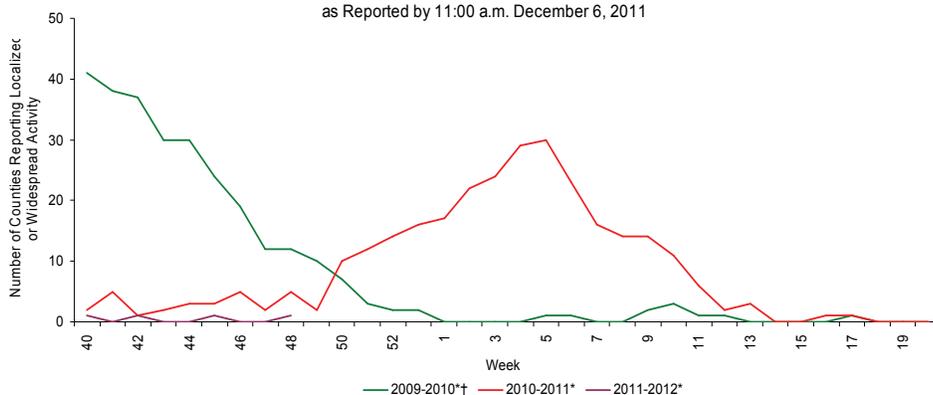

**Map 2: Weekly County Influenza Activity for Week 48 as Reported by 11:00 a.m. December 7, 2011**

One county reports moderate activity, and no counties report widespread activity

**FIGURE 15** shows the number of counties reporting localized or widespread activity, 2008-2009, 2009-2010, and 2010-2011.

**FIGURE 15: Number of Counties Reporting Moderate (Localized) or Widespread Activity, 2009-2010 (Weeks 40-20), 2010-2011 (Weeks 40-20), and 2011-2012 (Weeks 40-47) as Reported by 11:00 a.m. December 6, 2011**

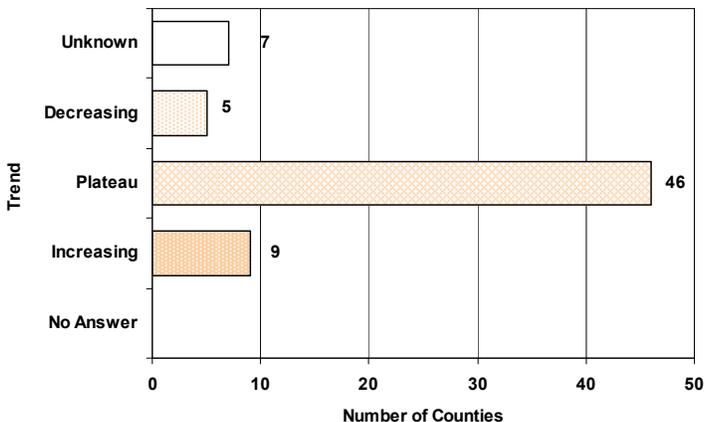

\* There is no week 53 during the 2007-2008, 2009-2010, and 2010-2011 seasons; the week 53 data point for those seasons is an average of weeks 52 and 1.

† As of Week 40 2010, the influenza activity code categorizations have changed. Please see [http://www.doh.state.fl.us/disease\\_ctr/epi/FluActivityDef.htm](http://www.doh.state.fl.us/disease_ctr/epi/FluActivityDef.htm) for explanations of previous year activity code interpretations.

County influenza activity data is reported to the Bureau of Epidemiology through EpiGateway on a weekly basis by the county influenza coordinator. Specific information is requested about laboratory results, outbreak reports, and surveillance system activity. Figures 16-25 displayed below reflect a county's assessment of influenza activity within their county as a whole as well as influenza activity within specific settings. For week 48, five counties indicated that activity was decreasing, 46 indicated it was about the same as previous weeks, and nine indicated that activity was increasing.

**FIGURE 16** shows the assessment of the overall influenza activity trend in each county as reported by county health department flu coordinators for week 48 as of 11:00 a.m. December 7, 2011.

**FIGURE 16: Assessment of Overall Influenza Activity Trend**

Definitions for the County Influenza Activity Trends are available at:  
[http://www.doh.state.fl.us/disease\\_ctrl/epi/CountyInfluenzaTrendGuide.html](http://www.doh.state.fl.us/disease_ctrl/epi/CountyInfluenzaTrendGuide.html)

Counties are asked to evaluate influenza activity in certain settings within their county. Each setting has a scale for activity that ranges from none or minimal activity to very high activity. What defines each of the values varies by facility type, but the example of the assessment in elementary, middle, and high schools is included below. More detailed information on the meanings of the levels for each setting can be found on the webpage also included below.

No or very minimal activity -- Scattered cases of ILI with no increase in absenteeism or disruption of school activities.

Moderate activity -- Absenteeism elevated above baseline (in range of 10 to 25%) in some but fewer than half of schools where it is known; occasional children sent home because of ILI.

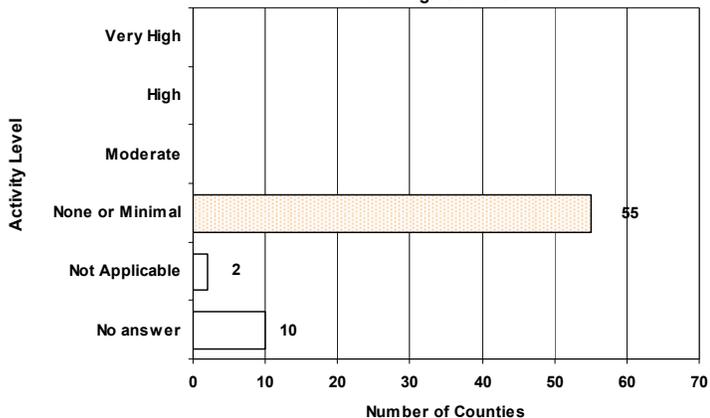

High activity -- Absenteeism elevated above baseline (in range of 10 to 25%) in more than half of schools; most schools sending several or many children home each day because of ILI.

Very high activity -- Absenteeism high enough to force curtailment of some or all school activities.

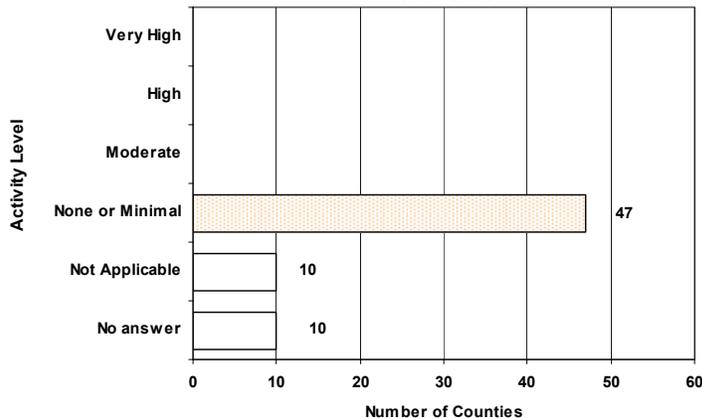

County influenza settings assessment guides are available at:  
[http://www.doh.state.fl.us/disease\\_ctrl/epi/FluAssessment.htm](http://www.doh.state.fl.us/disease_ctrl/epi/FluAssessment.htm)

**FIGURE 24: Assessment of Influenza Activity in Businesses**

**FIGURE 25: Assessment of Influenza Activity in State or Local Government Offices**

FDOH started the Florida Pneumonia and Influenza Mortality Surveillance System (FPIMSS) in 2006 in order to more timely assess the number of pneumonia and influenza deaths occurring in the state. This system was modeled on the CDC's 122 Cities Mortality Reporting System. Each week, the vital statistics office in the 24 most populous counties in Florida manually reviews the death certificates received for the previous week. Any mention of pneumonia or influenza on the death certificate, with certain prescribed exceptions, is counted as a pneumonia or influenza death. These counts, by age group, are then reported to the state through EpiGateway.

**FIGURE 26** shows Pneumonia and Influenza Deaths for 24 Florida Counties, 2008-2009, 2009-2010, 2010-11, and 2011-12

For week 48 (ending December 3) there were:

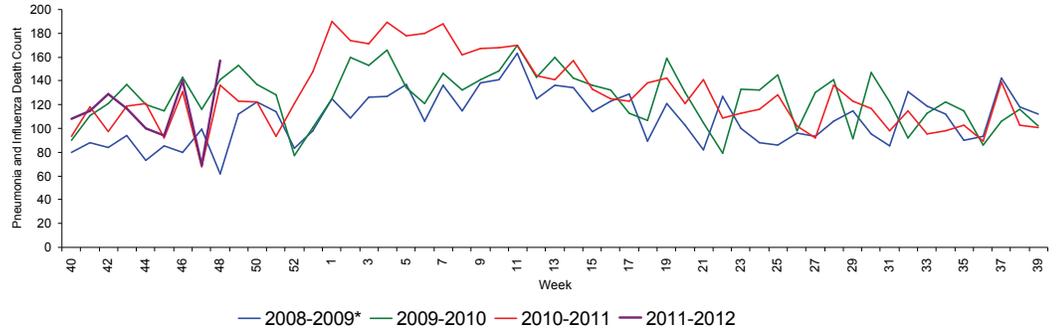

- **157 deaths reported**
- **Upper bound of 95% confidence interval for prediction: 179 deaths**
- **No excess deaths**

23 of 24 participating counties reported for week 48.

Note: One county has begun piloting an electronic vital records system. Numbers may change as new data from this system are received.

**FIGURE 27** shows Pneumonia and Influenza Deaths for 24 Florida Counties, week 40, 2009 - week 46, 2011 as reported to FPIMSS by 5:00 p.m. November 22, 2011

FIGURE 26: Pneumonia and Influenza Deaths for 24 Florida Counties, 2008-2009 (Weeks 40-39), 2009-2010 (Weeks 40-39), 2010-2011 (Week 40-38), and 2011-2012 (Week 40-48) as Reported to FPIMSS by 5:00 p.m. December 6, 2011

\*There is no week 53 for the 2007-2008, 2009-2010, and 2010-2011 seasons; the week 53 data point for those seasons is an average of weeks 52 and 1.
