

## Week 19: May 9 – May 15, 2010

### Summary

The Florida Department of Health (FDOH) monitors multiple surveillance systems such as the Electronic Surveillance System for the Early Notification of Community-based Epidemics (ESSENCE), the Florida Pneumonia and Influenza Mortality Surveillance System (FPIMSS), notifiable disease reports (Merlin), EpiCom, and Florida ILINet in order to track influenza activity in the state.

**National:**

- There were low levels of influenza activity in the United States during week 18. Flu activity in Florida's national surveillance region, Region 4, is no longer elevated over the rest of the United States. No states reported widespread or regional activity, and the highest proportion of states reported sporadic activity. Nationally, activity is less than previous years at this time.

**State:**

- Influenza-like illness (ILI) activity is low in many of our monitoring systems. This week no counties reported widespread or localized influenza activity. Percent of visits to ILINet providers for ILI increased slightly this week, ESSENCE ILI data remain slightly elevated over previous years at this time.
- Virtually all current influenza infection seen throughout the western hemisphere, and most of the rest of the world, is 2009 H1N1. Neither a different influenza virus, nor any other viruses that can cause influenza-like illness, have started causing significant illness in Florida. RSV, a virus that primarily affects infants and toddlers, is active throughout the state, as is usual this time of year.

**Weekly state influenza activity: Sporadic**

Florida is currently reporting Sporadic influenza activity statewide, due to the continuing low levels of influenza reflected in many of our surveillance systems. Florida is now past the time of year when normal flu seasons begin to decline, and although flu continues to circulate there was not a traditional winter peak in influenza activity.

TABLE 1: Summary of Florida Influenza-Like Illness (ILI) Activity for Week 19

Measure	Difference from previous week	Current week 19	Previous week 18	Page of Report
Overall statewide activity code reported to CDC	No Change	Sporadic	Sporadic	1
Percent of visits to ILINet providers for ILI	▲ 0.1	1.0%	0.9%	2
Percent of emergency department visits (from ESSENCE) due to ILI	▲ 0.3	1.7%	1.4%	4
Percent of hospital admissions (from ESSENCE) due to ILI	▼ 0.1	0.2%	0.3%	4
Percent of laboratory specimens that were positive for influenza	▲ 3.3	6.9%	3.6%	6
Percent of positive influenza specimens that were identified as 2009 H1N1	No Change	100.0%	100.0%	6
Number of counties reporting localized influenza activity	No Change	0	0	7
Number of counties reporting widespread influenza activity	No Change	0	0	7
Number of counties reporting increasing influenza activity	▼ 1	3	4	8
Number of counties reporting decreasing influenza activity	▼ 2	21	23	8
Number of recent deaths in confirmed 2009 H1N1 influenza cases	No Change	1	1	12
Number of recent hospitalizations in confirmed 2009 H1N1 influenza cases	▼ 1	2	3	13
Number of ILI outbreaks reported in Epi Com	No Change	1	1	14

## ILINET Influenza-like Illness-Statewide

FIGURE 2: Percentage of Visits for Influenza-Like Illness\* Reported by ILINet Sentinel Providers Statewide, 2006-2007, 2007-2008 (Weeks 40-20), 2008-2009 (Weeks 40-39), and 2009-2010 (Weeks 40-19) as Reported by 5:00 p.m. May 18, 2010

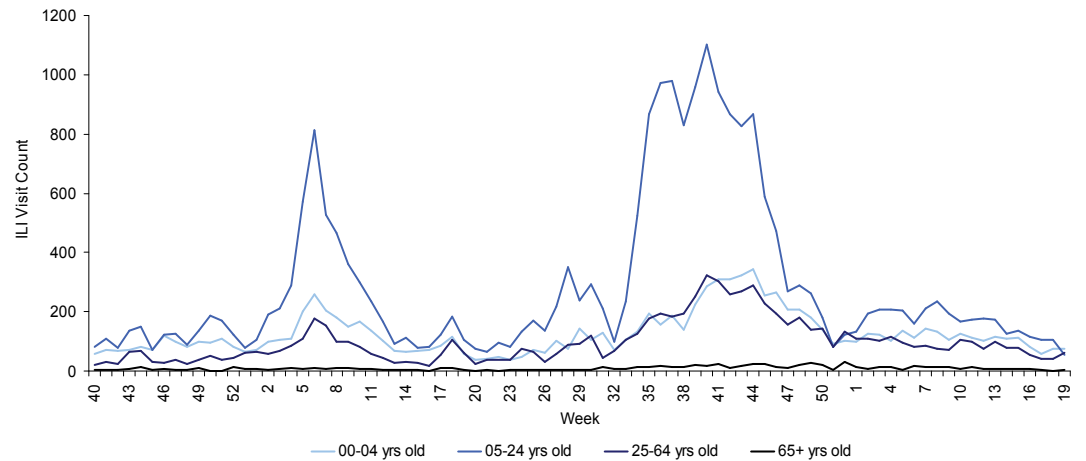

**FIGURE 2** shows the percentage of visits for influenza-like illness\* reported by ILINet Sentinel Providers statewide.

Week 19 is the 26th week in a row that Florida has been below the threshold for moderate activity. Influenza activity is similar to previous influenza seasons at this time.

\*ILI = Influenza-like illness, fever >100°F AND sore throat and/or cough *in the absence* of another known cause.  
 \*\*The 2009—2010 threshold for moderate activity is calculated from ILINet data. The threshold for moderate activity is the mean percentage of patient visits for ILI during influenza weeks for the previous three seasons plus two standard deviations. Only weeks with 10% or greater of laboratory specimens testing positive are included in the calculation. Due to wide variability in regional level data, it is not appropriate to apply the state baseline to regional data.  
 ^There is no week 53 during the 2006-2007, 2007-2008, and 2009-2010 seasons; the week 53 data point for those seasons is an average of weeks 52 and 1.

FIGURE 3: Influenza-like Illness (ILI) Visit Counts Reported by ILINet Sentinel Providers Statewide by Age Group Week 40, 2008-Week 19, 2010 as Reported to ILINet by 5:00 p.m. May 18, 2010

**FIGURE 3** shows influenza-like illness (ILI) visit counts reported by ILINet sentinel providers statewide by age group.

\*ILI = Influenza-like illness, fever >100°F AND sore throat and/or cough *in the absence* of another known cause.  
 †Data presented here are counts, not proportions as included in Figure 2. This is because age group denominator data is not available through ILINet.

Map 1: RDSTF Regions for ILINet Data

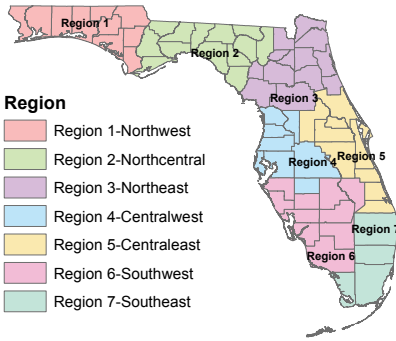

TABLE 2: ILINet Providers and Percent of Visits for ILI by Region, Week 19, as Reported by 5:00 p.m. May 18, 2010

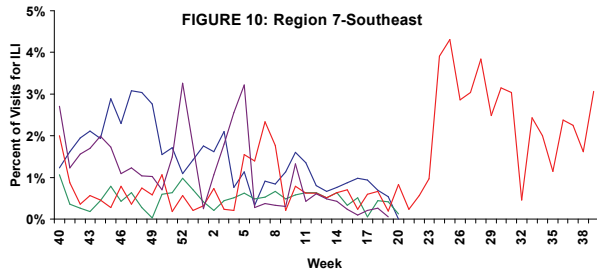

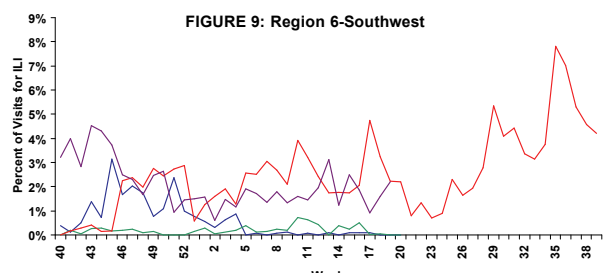

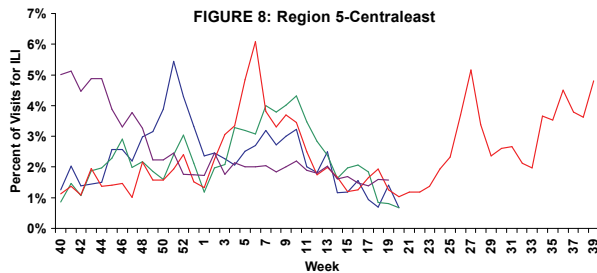

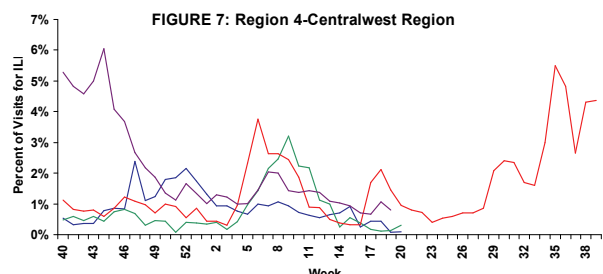

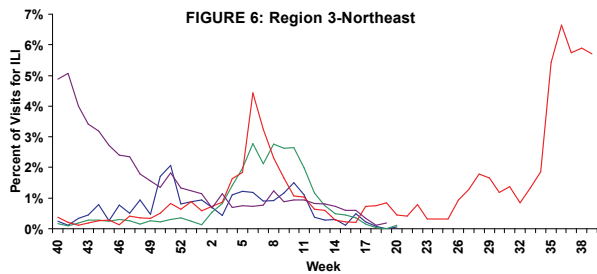

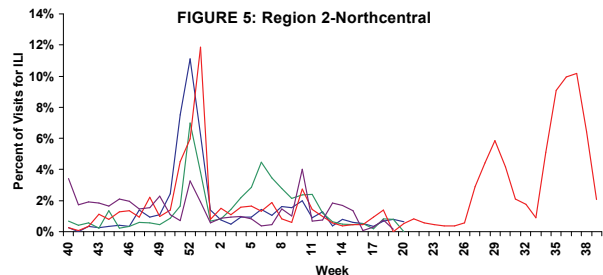

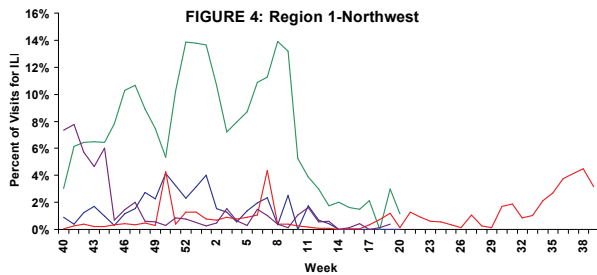

Region	Number of Participating Providers	Providers that Reported	Percent Visits for ILI
Region 1-Northwest	15	5	33.33%
Region 2-Northcentral	5	2	40.00%
Region 3-Northeast	22	10	45.45%
Region 4-Centralwest	39	14	35.90%
Region 5-Centraleast	50	35	70.00%
Region 6-Southwest	20	4	20.00%
Region 7-Southeast	26	6	23.08%
<b>Total</b>	<b>177</b>	<b>76</b>	<b>42.94%</b>

TABLE 2 shows the ILI activity by Regional Domestic Security Task Force (RDSTF) as reported by Florida ILINet physicians for week 19 (ending May 15, 2010).

FIGURE 4 - FIGURE 10 include ILI activity as reported by sentinel physicians for the 2006-2007, 2007-2008, 2008-2009, and 2009-2010 seasons.

This week all regions are reporting a percentage of visits due to ILI similar to what has been seen in previous years. Please refer to table above for the number of providers reporting for each region. Data should be interpreted with caution due to the low number of providers reporting in some regions. Numbers will change as more data are received.

Percentage of Visits for Influenza-Like Illness Reported by ILINet Sentinel Providers by RDSTF Region, 2006-07 (Weeks 40-20), 2007-2008 (Weeks 40-20), 2008-2009 (Weeks 40-39), and 2009-10 (Weeks 40-19) as Reported by 5:00 p.m. May 18, 2010.

**Graph Legend**

- 2006-2007\*
- 2007-2008\*
- 2008-2009
- 2009-2010\*

\*There is no week 53 during the 2006-07, 2007-08, and 2009-10 seasons; the week 53 data point for those seasons is an average of weeks 52 and 1.

Florida uses the Electronic Surveillance System for the Early Notification of Community-based Epidemics (ESSENCE) for syndromic surveillance, which currently collects data daily from 137 hospital emergency departments (ED). These data are processed into 11 different syndrome categories based on the patient's chief complaint. One of the categories is influenza-like illness (ILI), which is composed of chief complaints that include the words "influenza" or "flu," or either fever and cough or sore throat. Thirty facilities participating in ESSENCE have been able to provide historical admissions data and are included here.

**FIGURE 11** shows ESSENCE data on ILI visits to Emergency Departments as a percentage of all ED Visits.

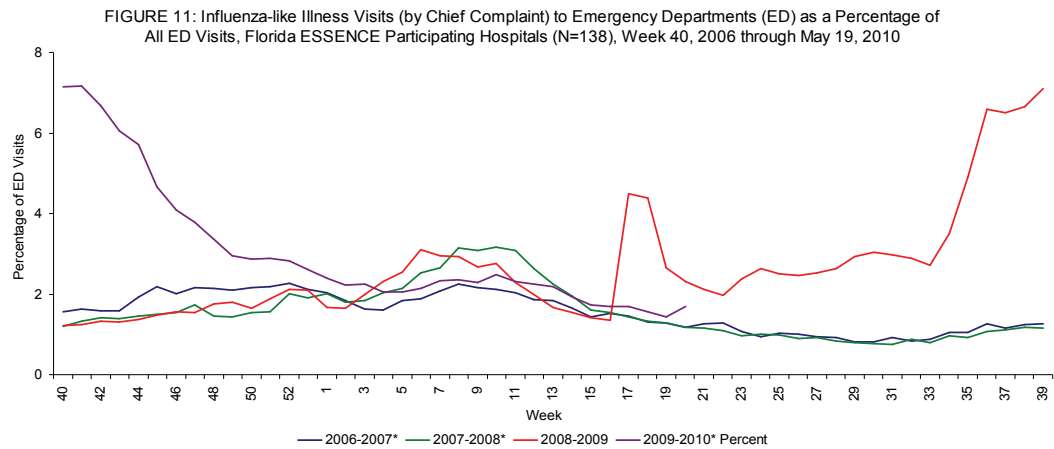

**Overall activity for influenza-like illness reported in ESSENCE is slightly elevated for this time of year.**

Florida has now passed the point at which normal winter influenza activity begins to decline.

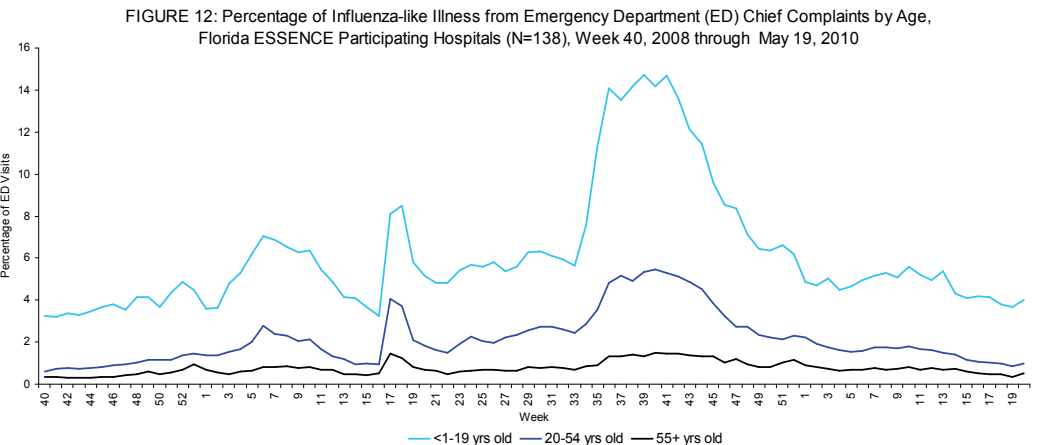

The majority of the increase in ED visits is occurring in younger age groups. After a steep decline in late 2009 and small increases beginning in week 6, 2010, ILI visits have stabilized at a level less than most normal seasonal influenza peaks, but greater than normal lows between influenza

**FIGURE 12** shows percentage of ILI among all ED visits by age group.

Age-specific trends show that there are increases in ILI activity for younger age groups (<1-19), while older age groups have seen slight declines in ILI activity levels.

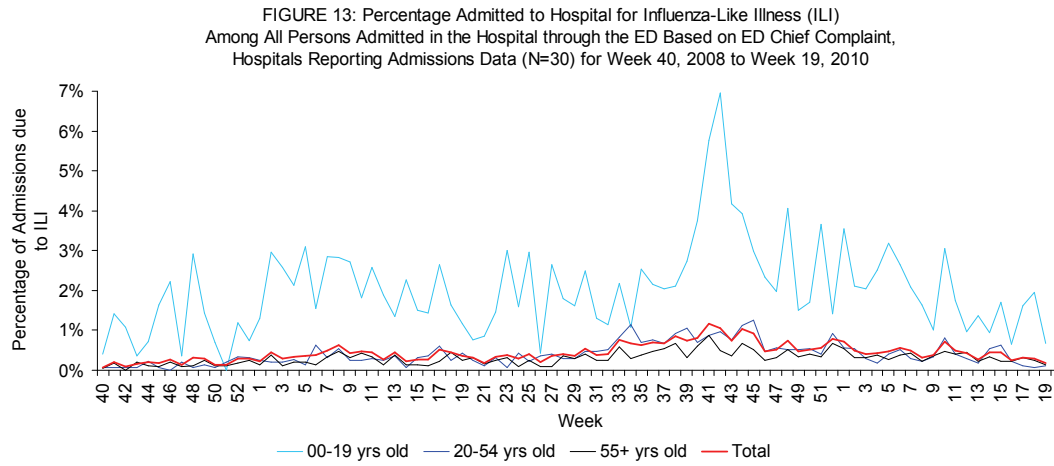

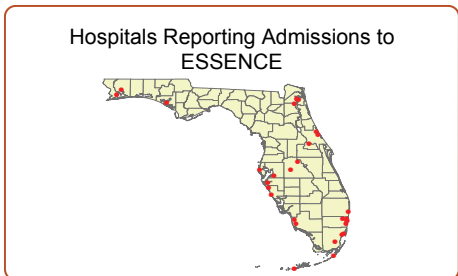

\*There is no week 53 for the 2006-2007, 2007-2008, or 2009-2010 seasons; the week 53 data point for those seasons is an average of weeks 52 and 1.

Thirty facilities participating in ESSENCE have been able to provide historical admissions data and are included here. The percentage of admissions for ILI is highest in those less than 20 years old, but the small numerators and denominators in this age group result in high variability. The percentages in the older age groups is less variable and shows a distinct increase starting around week 32. Overall, the percentage of admissions due to ILI is very low. These data are based on the patient's chief complaint when presenting to the emergency department and may not reflect the actual diagnosis.

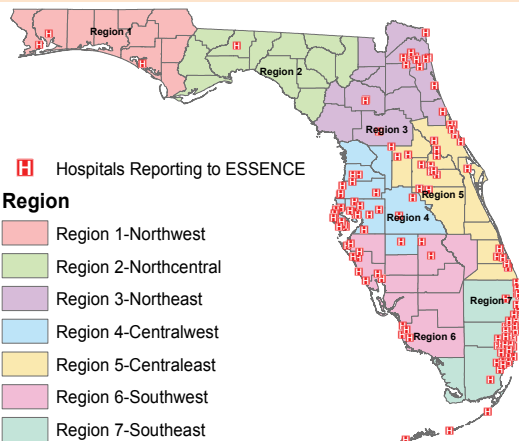

**FIGURE 13** shows hospital admissions due to ILI as a percentage of all hospital admissions.

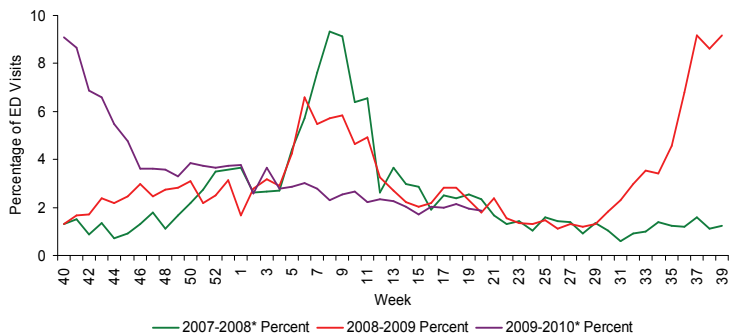

**FIGURE 14 - FIGURE 19** describe emergency department chief complaint data from ESSENCE by Domestic Security Task Force Region

All regions' percentage of ILI among emergency department (ED) visits have stabilized and are at levels similar to normal influenza seasons.

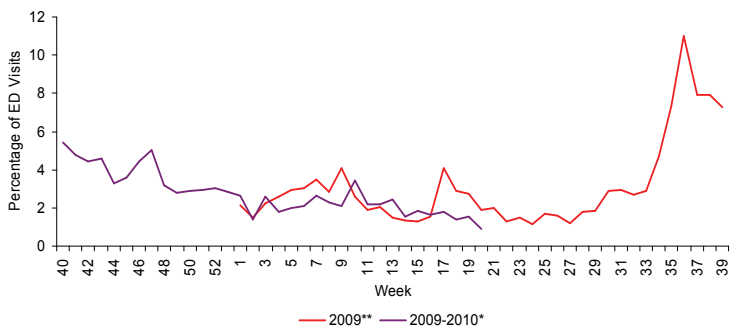

**Map 2: Hospitals Reporting Emergency Department (ED) Data to Florida ESSENCE, May 18, 2010 (N=138)**

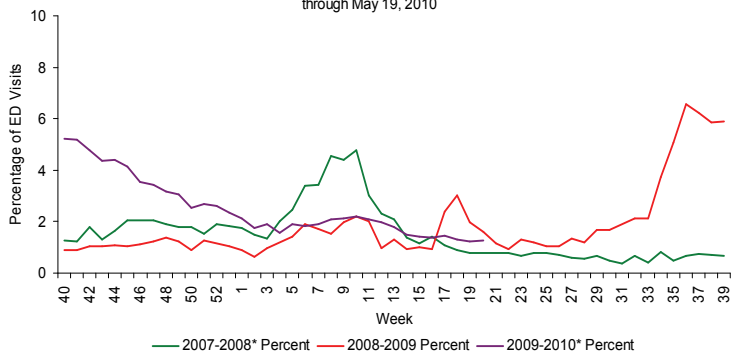

**FIGURE 14:** Percentage of Influenza-Like Illness from Emergency Department (ED) Chief Complaints, RDSTF Region 1 ESSENCE Participating Hospitals (N=3), Week 40, 2007 through May 19, 2010

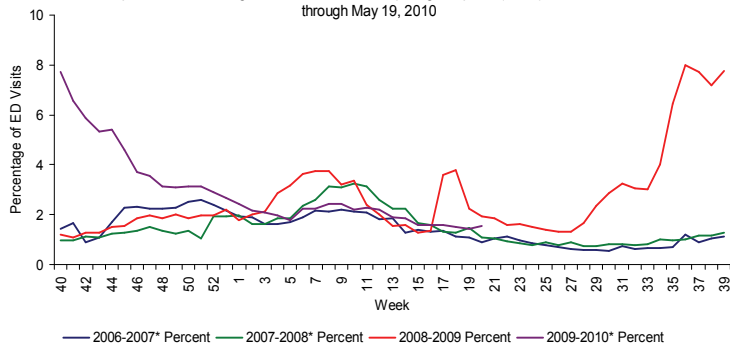

**FIGURE 15:** Percentage of Influenza-Like Illness from Emergency Department (ED) Chief Complaints, RDSTF Region 2 ESSENCE Participating Hospitals (N=1), Week 1, 2009 through May 19, 2010

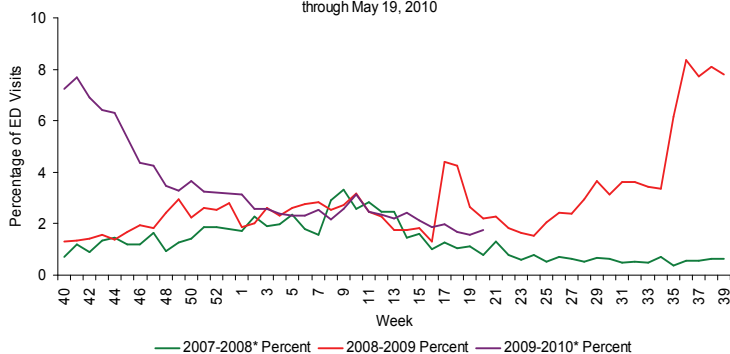

**FIGURE 17:** Percentage of Influenza-Like Illness from Emergency Department (ED) Chief Complaints, RDSTF Region 4 ESSENCE Participating Hospitals (N=31), Week 40, 2006 through May 19, 2010

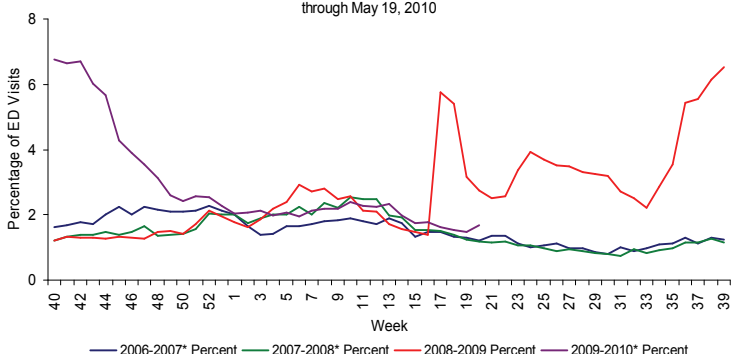

**FIGURE 18:** Percentage of Influenza-Like Illness from Emergency Department (ED) Chief Complaints, RDSTF Region 5 ESSENCE Participating Hospitals (N=26), Week 40, 2007 through May 19, 2010

**FIGURE 19:** Percentage of Influenza-Like Illness from Emergency Department (ED) Chief Complaints, RDSTF Region 6 ESSENCE Participating Hospitals (N=15), Week 40, 2007 through May 19, 2010

**FIGURE 20:** Percentage of Influenza-Like Illness from Emergency Department (ED) Chief Complaints, RDSTF Region 7 ESSENCE Participating Hospitals (N=48), Week 40, 2006 through May 19, 2010

**Table 3** shows the number of specimens tested by the Bureau of Laboratories (BOL), how many are influenza positive, and how many are H1N1 or other influenza subtypes.

Virtually all infections due to novel H1N1 are caused by strains that are sensitive to oseltamivir and zanamivir (Tamiflu and Relenza).

**FIGURE 20 - FIGURE 22** use BOL viral surveillance data to track the progress of influenza infection over time. They include weekly information on how many specimens are tested by the BOL, what proportion of those test positive for influenza, and what subtypes are found for the positive influenza specimens.

Note: week 18, 2010 data are included in figures 20-22, but small numbers of specimens make them difficult to see.

**The vast majority of positive influenza specimens are H1N1, with some exceptions:**

Five specimens have tested positive for H3 seasonal Influenza A since week 44, 2009.

- One in week 15, 2010, one in week 49, 2009, one in week 46, and two in week 44.

- H3 seasonal Influenza A has been seen during normal influenza season.

Six specimens have tested positive for Influenza B since week 39.

- One in week 6, 2010, one in week 4, two in week 44, 2009, one in week 40, and one in week 39.

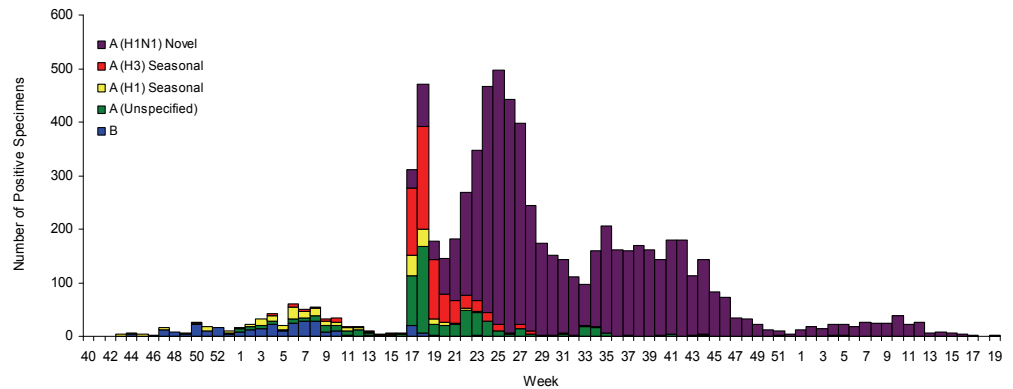

- Influenza B, unlike influenza A, does not have significant pandemic potential.

*Laboratory information is preliminary and will change as additional results are received. Totals from previous weeks will be adjusted to reflect correct specimen numbers.*

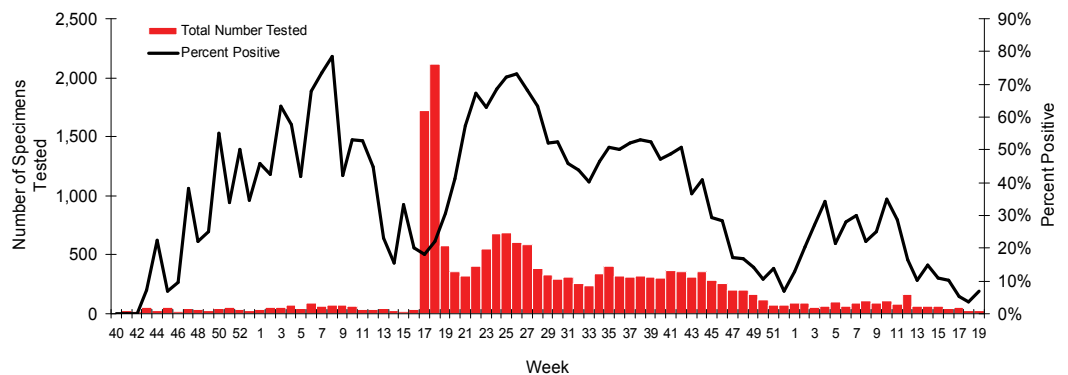

**Table 3: Bureau of Laboratories Viral Surveillance for Week 19 by Lab Event Date\* as reported by 11:30 a.m. May 19, 2010**

	Current Week 19	Previous Week 18
<b>Total Specimens Tested</b>	<b>29</b>	<b>28</b>
Influenza Positive Specimens (% of total)	2 (6.9%)	1 (3.6%)
H1N1 Positive Specimens (% of influenza positives)	2 (100.0%)	1 (100.0%)
H3 Influenza A	-	-

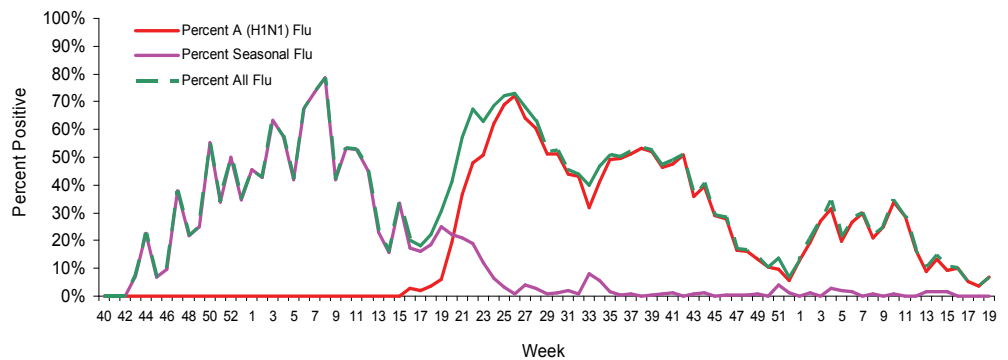

**FIGURE 20: Number of Influenza-Positive Specimens Tested by the Florida Bureau of Laboratories (BOL) by Subtype by Lab Event Date\* Week 40, 2008 to Week 19, 2010 as Reported in Merlin by 11:30 a.m. May 19, 2010**

**FIGURE 21: Number of Specimens Tested by Florida Bureau of Laboratories (BOL) and Percent Positive for Influenza by Lab Event Date\* Week 40, 2008 to Week 19, 2010 as Reported in Merlin by 11:30 a.m. May 19, 2010**

**FIGURE 22: Percentage of Specimens Tested by Florida Bureau of Laboratories (BOL) Positive for Influenza by Subtype by Lab Event Date\* Week 40, 2008 to Week 19, 2010 as Reported in Merlin by 11:30 a.m. May 19, 2010**

\*Please note that lab event date is defined as the earliest of the following dates associated with the lab: date collected, date received by the laboratory, date reported, or date inserted.

For county-specific laboratory data, please refer to the Flu Lab Report in Merlin.

For instructions on how to use the Flu Lab Report, please see the Guide to Flu Lab Report on the Bureau of Epidemiology website:

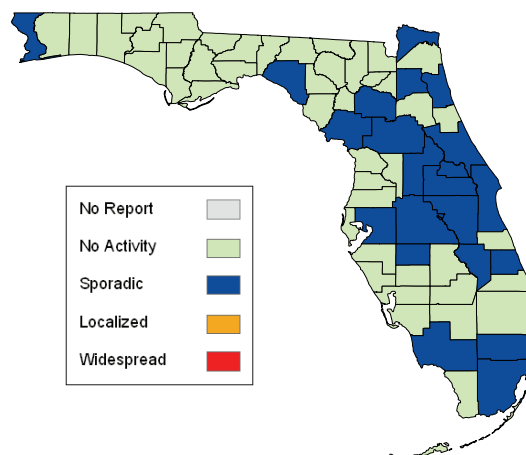

[http://www.doh.state.fl.us/disease\\_ctrl/epi/htopics/flu/FluLabReportGuide.pdf](http://www.doh.state.fl.us/disease_ctrl/epi/htopics/flu/FluLabReportGuide.pdf)

As of 2:30 p.m. May 19, 2010 a total of 67 (100%) counties had reported their weekly level of influenza activity. This is the twenty-third week in a row we have achieved 100% reporting, thanks to enhanced follow-up with counties. *Please note that data reported by counties after the deadline Tuesday at 5 p.m. are recorded but may not be included in the activity map for previous weeks.*

**TABLE 4: Weekly County Influenza Activity for Week 19 (ending May 15, 2010) as Reported by 2:30 p.m. May 19, 2010**

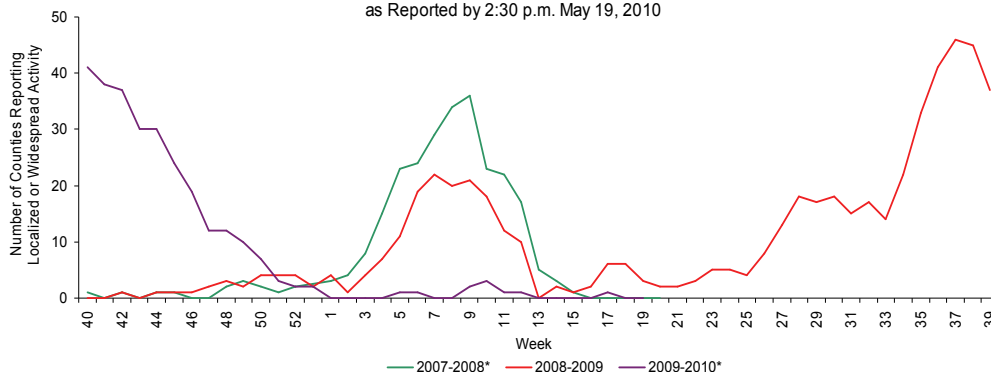

Activity Level	Week 18 Number of Counties	Week 19 Number of Counties	Week 19 Counties
No Report	0	0	-
No Activity	41	45	Baker, Bay, Bradford, Calhoun, Charlotte, Citrus, Columbia, Desoto, Dixie, Duval, Flagler, Franklin, Gadsden, Gilchrist, Glades, Gulf, Hamilton, Hendry, Hernando, Highlands, Holmes, Indian River, Jackson, Jefferson, Lafayette, Lee, Leon, Liberty, Madison, Manatee, Martin, Monroe, Okaloosa, Palm Beach, Pasco, Pinellas, Putnam, Santa Rosa, Sarasota, Sumter, Suwannee, Union, Wakulla, Walton,
Sporadic	26	22	Alachua, Brevard, Broward, Clay, Collier, Dade, Escambia, Hardee, Hillsborough, Lake, Levy, Marion, Nassau, Okeechobee, Orange, Osceola, Polk, St. Johns, St. Lucie, Seminole, Taylor, Volusia

Widespread	0	0	-

**Map 3: Weekly County Influenza Activity for Week 19 as Reported by 2:30 p.m. May 19, 2010**

No counties report localized or widespread influenza activity

**FIGURE 23: Number of Counties Reporting Localized or Widespread Activity, 2007-2008 (Weeks 40-20), 2008-2009 (Weeks 40-39), and 2009-2010 (Weeks 40-19) as Reported by 2:30 p.m. May 19, 2010**

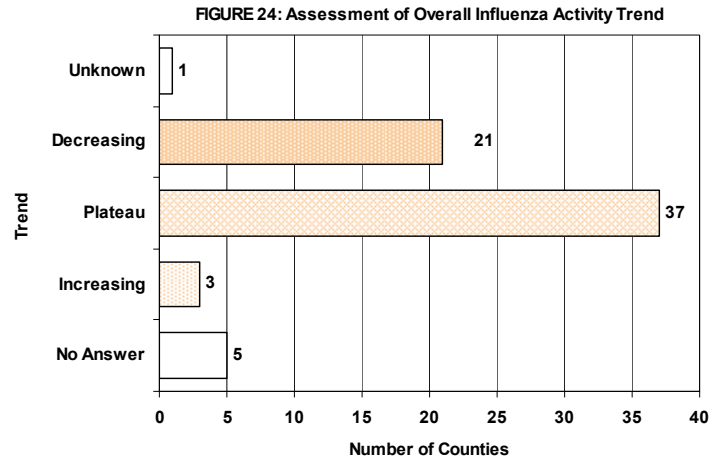

**FIGURE 23** shows the number of counties reporting localized or widespread activity, 2007-2008, 2008-2009, and 2009-2010.

County flu activity level definitions are now available online at: [http://www.doh.state.fl.us/disease\\_ctr/epi/FluActivityDef.htm](http://www.doh.state.fl.us/disease_ctr/epi/FluActivityDef.htm)

County influenza activity data is reported to the Bureau of Epidemiology through EpiGateway on a weekly basis by the county influenza coordinator. Specific information is requested about laboratory results, outbreak reports, and surveillance system activity. Figures 24-33 displayed below reflect a county's assessment of influenza activity within their county as a whole as well as influenza activity within specific settings. For the week ending May 8th, 21 counties indicated that activity was decreasing, 37 indicated it was about the same, and 3 indicated that activity was increasing.

**FIGURE 24** shows the assessment of Overall Influenza Activity Trend in County as Reported by County Health Department Flu Coordinators for week 19 as of 12:00 p.m. May 19, 2010.

Definitions for the County Influenza Activity Trends are available at:  
[http://www.doh.state.fl.us/disease\\_ctrl/epi/CountyInfluenzaTrendGuide.html](http://www.doh.state.fl.us/disease_ctrl/epi/CountyInfluenzaTrendGuide.html)

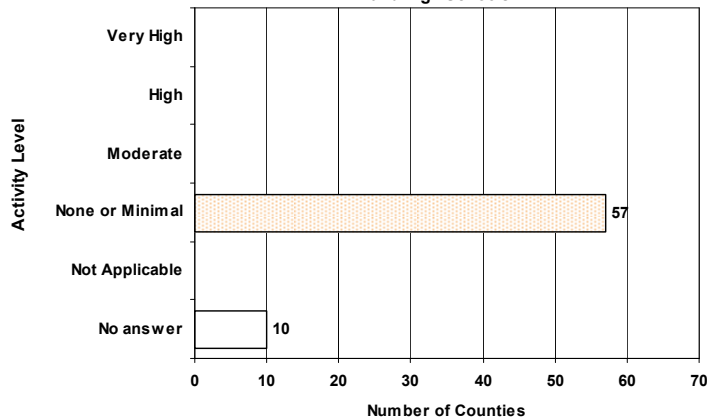

Counties are asked to evaluate influenza activity in certain settings within their county. Each setting has a scale for activity that ranges from none or minimal activity to very high activity. What defines each of the values varies by facility type, but the example of the assessment in elementary, middle, and high schools is included below. More detailed information on the meanings of the levels for each setting can be found on the webpage also included below.

- No or very minimal activity -- Scattered cases of ILI with no increase in absenteeism or disruption of school activities.
- Moderate activity -- Absenteeism elevated above baseline (in range of 10 to 25%) in some but fewer than half of schools where it is known; occasional children sent home because of ILI.
- High activity -- Absenteeism elevated above baseline (in range of 10 to 25%) in more than half of schools; most schools sending several or many children home each day because of ILI.
- Very high activity -- Absenteeism high enough to force curtailment of some or all school activities.

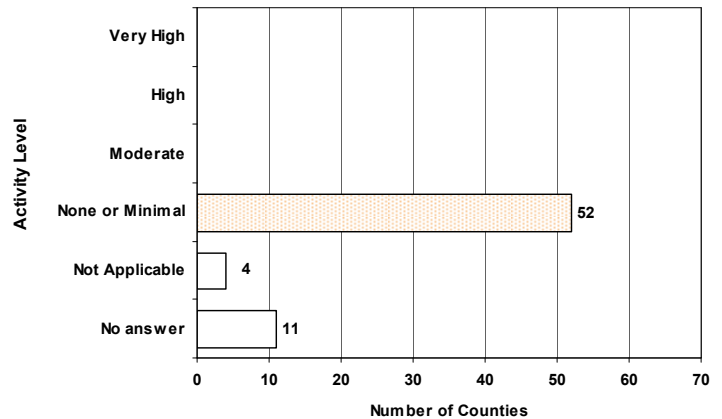

County influenza settings assessment guides are available at:  
[http://www.doh.state.fl.us/disease\\_ctrl/epi/FluAssessment.htm](http://www.doh.state.fl.us/disease_ctrl/epi/FluAssessment.htm)

**FIGURE 25 - FIGURE 26** show the activity levels in various facilities by county as reported by county health department flu coordinators for week 19 as of 12:00 p.m. May 19, 2010.

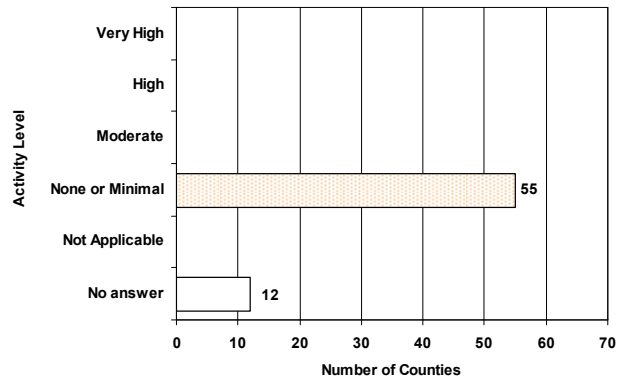

**FIGURE 29: Assessment of Influenza Activity in Nursing Homes**

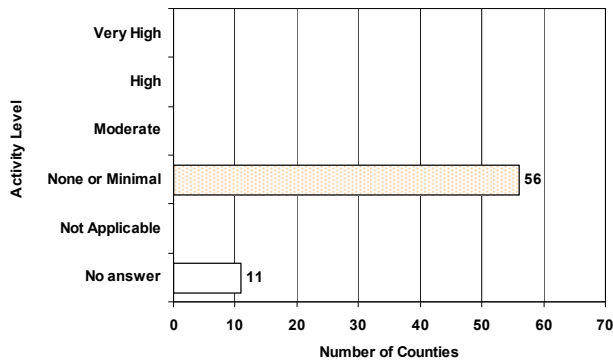

**FIGURE 30: Assessment of Influenza Activity in Health Care Facilities**

**FIGURE 32: Assessment of Influenza Activity in Businesses**

**FIGURE 33: Assessment of Influenza Activity in State or Local Government Offices**

The Florida Department of Health started the Florida Pneumonia and Influenza Mortality Surveillance System (FPIMSS) in 2006 in order to more timely assess the number of pneumonia and influenza deaths occurring in the state. This system was modeled on the CDC's 122 cities surveillance system. Each week, the vital statistics office in the 24 most populous counties in Florida manually reviews the death certificates received for the previous week. Any mention of pneumonia or influenza on the death certificate, with certain prescribed exceptions, is counted as a pneumonia or influenza death. These counts, by age group, are then reported to the state via the EpiGateway web-interface. Note that as of week 44 we are now using a Serfling model to more accurately calculate our predicted values for weekly pneumonia and influenza mortality. Expect continued updates in the coming weeks.

**FIGURE 33** shows Pneumonia and Influenza Deaths for 24 Florida Counties, 2006-2007, 2007-2008, 2008-2009, and 2009-2010

- For week 19 (ending May 15, 2010) there were:
- **157 deaths reported**
  - **Upper bound of 95% confidence interval for prediction: 159 deaths**
  - **NO excess deaths**

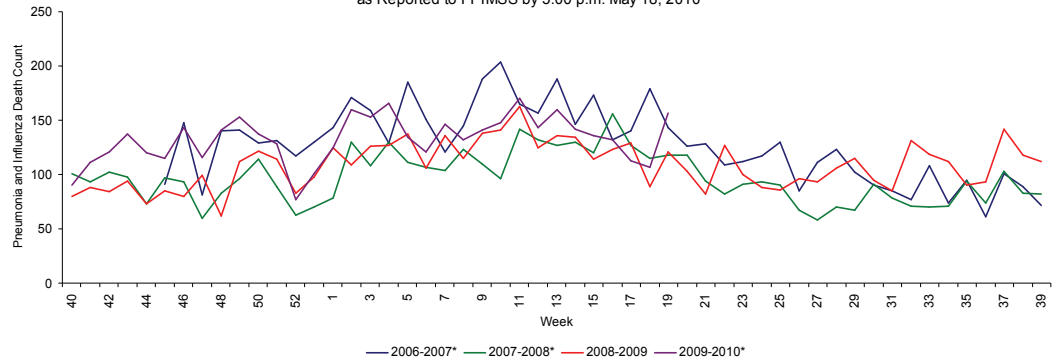

The majority of the deaths are in those aged 45 years and older.

All 24 participating counties reported their data for week 19.

**FIGURE 34** shows Pneumonia and Influenza Deaths for 24 Florida Counties, week 1, 2008 - week 19, 2010 as reported to FPIMSS by 1:00 p.m. May 18, 2010

**FIGURE 35** shows the reported count of pneumonia and influenza deaths for 24 Florida counties, the number of deaths predicted using the Serfling Model, and the upper bound of the 95% confidence interval for this prediction

FIGURE 34: Pneumonia and Influenza Deaths for 24 Florida Counties, 2006-2007 (Weeks 40-39), 2007-2008 (Weeks 40-39), 2008-2009 (Weeks 40-39), and 2009-2010 (Weeks 40-19) as Reported to FPIMSS by 5:00 p.m. May 18, 2010

\*There is no week 53 for the 2006-2007, 2007-2008, or 2009-2010 seasons; the week 53 data point for those seasons is an average of weeks 52 and 1.

FIGURE 35: Pneumonia and Influenza Deaths in 3 Age Groups for 24 Florida Counties, Week 1, 2008-Week 18, 2010 as Reported to FPIMSS by 5:00 p.m. May 18, 2010

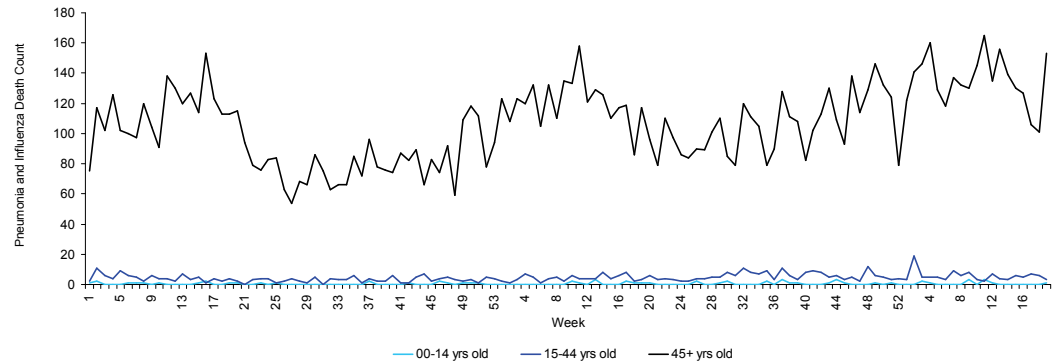

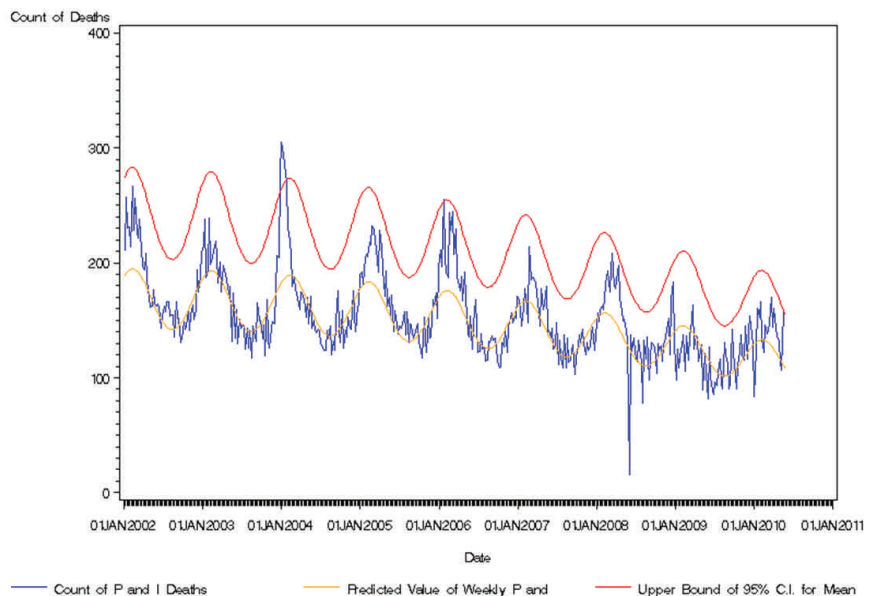

Figure 36: Pneumonia and Influenza Deaths for 24 Counties, Serfling Model January 24, 2009-May 15, 2010 as Reported to FPIMSS as of 5:00 p.m. May 18, 2010

**FIGURE 36** shows deaths in patients with novel H1N1\*, hospitalizations due to H1N1\*\*, and outbreaks of Influenza or ILI\*\*\*, from week 17, when confirmed or probable cases of novel H1N1 in patients with life-threatening illness became reportable, to week 19, 2010

**Deaths:** Note that the exact contribution of H1N1 to the death is variable and may be unknown, as many of these deaths occur in people with complicated medical histories. Novel influenza A H1N1 infection would be coded as the underlying or primary cause on a death certificate for **some but not all** of these deaths. About 20 percent of deaths due to H1N1 are in persons with no underlying conditions.

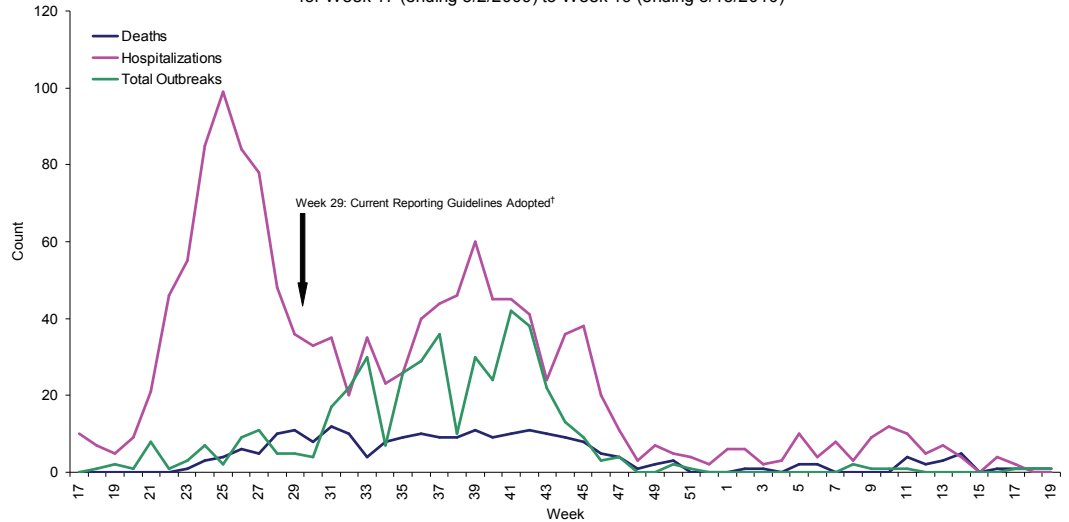

The case definition for novel H1N1 deaths can be found at:

[http://www.doh.state.fl.us/disease\\_ctrl/epi/swineflu/ReportingDeaths8-11.pdf](http://www.doh.state.fl.us/disease_ctrl/epi/swineflu/ReportingDeaths8-11.pdf)

**Hospitalizations:** Note that under the current surveillance strategy, case reporting is only required for confirmed or probable cases of novel H1N1 influenza in a) patients with life-threatening illness, b) pregnant women who are hospitalized, and c) deaths.

*Use caution when interpreting hospitalization data, as only hospitalized patients with life-threatening illness are reportable and there is some variability in communities as to how "life-threatening illness" is interpreted.*

Figure 37: Cumulative Deaths<sup>†</sup> and Hospitalizations<sup>††</sup> in Novel H1N1 Cases, and Outbreaks of Influenza or ILI<sup>†††</sup> for Week 17 (ending 5/2/2009) to Week 19 (ending 5/15/2010)

\* Deaths are classified by date of death.

\*\* Hospitalizations are classified by event date which is defined as the earliest of the following dates associated with the case: date of onset, date of diagnosis, lab report date, or date reported to CDH.

\*\*\* Outbreaks are classified by when they are reported into EpiCom.

† In week 29 Florida stopped making all cases of lab-confirmed H1N1 influenza reportable, and adopted the current guidelines for reporting hospitalizations and deaths.

## Notifiable Disease Reports: Influenza-Associated Pediatric Mortality

Influenza-associated deaths among those <18 years of age and/or post-influenza infection encephalitis are reportable; case report forms can be accessed at: [http://www.doh.state.fl.us/disease\\_ctrl/epi/topicscrforms.htm](http://www.doh.state.fl.us/disease_ctrl/epi/topicscrforms.htm).

Note that the case definition for pediatric influenza mortality is different than the case definition for mortality with novel H1N1. Pediatric influenza-associated mortality cases are only counted after influenza is determined to be the cause of death.

The case definition is available at: [http://www.cdc.gov/ncphi/diss/nndss/casedef/Influenza-Associated\\_current.htm](http://www.cdc.gov/ncphi/diss/nndss/casedef/Influenza-Associated_current.htm)

### Influenza-Associated Pediatric Mortality

- **No** influenza-associated deaths among those <18 years of age were reported in week 19, for a total of 7 cases for the 2009-2010 season.
- **Seven** influenza-associated deaths among those <18 years of age were reported for the 2008-2009 influenza season (week 40, 2008 to week 39, 2009).

**TABLE 5 - TABLE 7** The number of deaths reported each week since July 26, 2009 has ranged from 0 (weeks 52, 1, 2, 4, 7, 8 and 10) to 13 (week 38), with an average of 4.4 deaths reported per week. ^As of week 41, underlying conditions include pregnancy unless otherwise noted. The case definition for novel H1N1 deaths can be found at: [http://www.doh.state.fl.us/disease\\_ctrl/epi/swineflu/ReportingDeaths8-11.pdf](http://www.doh.state.fl.us/disease_ctrl/epi/swineflu/ReportingDeaths8-11.pdf)

Note that the exact contribution of H1N1 to the death is variable and may be unknown, as many of these deaths occur in people with complicated medical histories. Novel influenza A H1N1 infection would be coded as the underlying or primary cause on a death certificate for **some but not all** of these deaths. About 15 percent of deaths due to H1N1 are in persons with no underlying conditions.

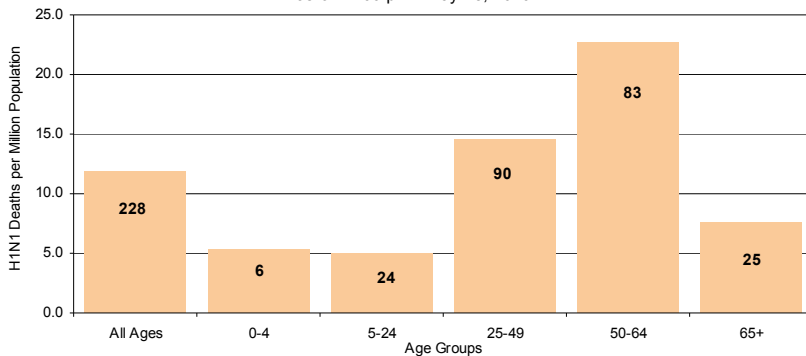

**TABLE 6: Recent Deaths in Novel H1N1 Influenza Cases by County, 12:00 Noon May 11 to 12:00 Noon May 18, 2010**

County	Number	Percent
<b>Total</b>	<b>1</b>	<b>100.0</b>
Orange	1	100.0

**TABLE 7: Cumulative deaths in Novel H1N1 Influenza Cases by Age as of 12:00 Noon May 18, 2010**

**TABLE 9 - TABLE 10** The number of hospitalizations reported weekly since July 26, 2009 ranges from 0 (week 17, 2010) to 54 (week 40, 2009), an average of 18.0 hospitalizations reported per week. ^As of week 41, underlying conditions include pregnancy unless otherwise noted.

\*Please note that under the current surveillance strategy, case reporting is only required for confirmed or probable cases of novel H1N1 influenza in a) hospitalized pregnant women, b) deaths, and c) hospitalized patients with life-threatening illness. Note: there is some variability in communities as to how "life-threatening illness" is interpreted.

Figure 39: Cumulative Laboratory-Confirmed Novel H1N1 Hospitalization Rate and Cumulative hospitalizations in Reported Novel H1N1 Cases by Age Group as of 12:00 p.m. May 18, 2010

**FIGURE 39** shows cumulative rates of H1N1 hospitalization by age group, per 1,000,000 population, and cumulative hospitalizations in each age group.

## 436 confirmed or suspect outbreaks of novel H1N1 influenza or ILI have been reported as of May 17, 2010

Schools have been the most heavily impacted setting with 257 (59.4%) of the 435 outbreaks. Summer camps accounted for 50 (11.5%) of the outbreaks, daycares accounted for 27 (6.2%), and correctional facilities accounted for 28 (56.0%).

## 1 confirmed or suspect outbreak of novel influenza A (H1N1) or ILI was reported during week 19 (ending May 15, 2010)

The outbreak reported in week 19 was in a workplace setting. There were no outbreaks reported from week 12 through week 16. At least one outbreak was reported into EpiCom each week during weeks 8-11. Before week 8, Florida saw a decline in the total number of new outbreaks reported per week, from approximately 30 new outbreaks per week down to no outbreaks reported during weeks 48, 49, and 52 through week 7.

County health department epidemiologists should report influenza and ILI outbreaks via the Influenza Forum in EpiCom:
