Florida Department of Health
Integrated Preparedness Plan (IPP)

April 2021

Table of Contents

Preface

The Florida Division of Emergency Management (FDEM) is responsible for developing and maintaining the state of Florida Integrated Preparedness Plan (IPP), formerly known as the Multi-Year Training and Exercise Plan (MYTEP).The state of Florida's IPP document represents all domestic security interdisciplinary training and exercise (T & E) goals and projected schedules for the state and is updated annually. The Florida Department of Health's (FDOH), Bureau of Preparedness and Response (BPR), uses a capability-based approach in relation to the preparedness cycle. Preparedness is a continuous cycle of planning, organizing, training, equipping, exercising, evaluating, and taking corrective action, to ensure effective coordination during incident response. Due to COVID-19, collaboration efforts were limited, with only Health Care Coalitions, and not County Health Departments, in creating the 2022-2024 IPP.

FDEM uses a standard collection process that allows for input from both county and state stakeholders, including the Department of Health. The state of Florida's IPP provides a roadmap for Florida to accomplish priorities described in Florida's Domestic Security Strategic Plan. Each state priority is linked to a corresponding national priority and, if applicable, an improvement plan. The priority is further linked to associated federal capabilities, as well as training and exercises to help jurisdictions achieve those capabilities.

The Department of Health's HCCs and CHDs create the Florida Department of Health's annual IPP. The documented is updated every year and follows a similar collection process used by FDEM. The IPP is published and submitted to FDEM for inclusion in the state of Florida IPP. It also provides a framework for training and exercise priorities to meet goals, objectives, and strategies in the Department's strategic plan.

The goal of Florida's IPP is to help prevent and/or minimize illness, injury, and loss of life to Floridians and visitors due to person-made or natural disasters, or other emergencies. The Department achieves this goal through developing and sustaining critical capabilities which enhance the ability of Florida's public health and health care system to prevent, respond to, and recover from all types of hazards. Having a viable public health and health care system is part of an integrated domestic security and emergency management system in Florida.

The Department of Health's IPP aligns with the 2017-2022 Health Care Preparedness and Response Capabilities, Office of the Assistant Secretary for Preparedness and Response (ASPR), as well as the Centers for Disease Control and Prevention (CDC) *Public Health Emergency Preparedness and Response Capabilities: National Standards for State and Local* Readiness, where each capability standard identifies resource elements pertinent to both routine general public health activities and critical public health services. This helps support an "everyday use" model in which applying the capability standards improves day-to-day effectiveness in building a stronger foundation.

For additional information on the IPP and/or any of its components, please contact Zuzel Alonso at Zuzel.Alonso@flhealth.gov or 850-245-4894.

Points of Contact (POCs)

Training and Exercise Section Program Manager:

772-579-8520 (cell)
Zuzel.Alonso@flhealth.gov

Purpose

The purpose of the 2022-2024 PHHP IPP is to provide training and exercise priorities and a roadmap to meet strategies to support the following national and state standards:

- **Public Health Emergency Preparedness and Response Capabilities: National Standards for State and Local Planning (October 2018; Updated January 2019)**

- **ASPR Health Care Preparedness Capabilities, 2017-2022 Health Care Preparedness and Response Capabilities (November 2016)**

- **After-Action Report/Improvement Plan (AAR/IP) data from Florida statewide exercises and real-world emergency incidents and events**

- **The Department's Appendix to the State's Comprehensive Emergency Management Plan (CEMP)**

- **FDOH Strategic Priorities for Preparedness Activities, July 2017 – June 2022;**

Developing and sustaining public health and health care capabilities enhances BPRs ability to prevent, respond to, and recover from disasters and emergencies of all types. In this way, the Department ensures coordination across the spectrum of capabilities, which allows for a resilient, flexible, and adaptable public health and health care preparedness system.

The IPP covers training and exercise priorities that are both common across the entire state and jurisdictionally specific. In addition, the public health and health care community is encouraged to participate in their county emergency management IPP process, leverage their local Threat and Hazard Identification and Risk Assessment (THIRA) and Florida Public Health Risk Assessment Tool (FPHRAT), and After-Action Plans (AAR) when addressing gaps. This ensures their community priorities are addressed.

Each year, county health departments (CHDs), and health care coalitions (HCCs) strive to achieve IPP goals. IPP priorities listed in the 2022-2024 templates and calendars are guidelines to reach the targets identified in local strategies as well as in the *FDOH Strategic Priorities for Preparedness Activities.* Due to COVID-19, County Health Departments were engaged in vaccination efforts and therefore not able to participate during this (2020-2021) cycle.

The FDEM's annual Statewide Exercise provides a unique opportunity for all Department of Health programs with response or support responsibilities, to test capabilities with state Emergency Support Function 8 (ESF-8), HCCs, and local partners.

The Department uses the Homeland Security Exercise and Evaluation Program (HSEEP) as the standard for exercise management. Adherence to the guidance presented in the HSEEP methodology ensures exercise programs conform to established best practices and helps provide unity and consistency in exercises for all levels of government and non-governmental partners.

Hazard Focus Areas

The Department's Preparedness Strategic Planning Oversight Team (SPOT) identified five (5) hazard types as the priority focus areas for alignment of preparedness activities (shown below). The hazard focus areas change periodically, and during a five-year grant funding period, generally work effort should be aligned with and in support of building capability to respond to these specific hazard types. Additionally, preparedness efforts would be measured per these hazard types to determine if the residual risk to these hazards decreases as capability and resources increase.

Hazard Name	Definition
Biological Disease Outbreak*	The occurrence of a larger number of cases of an illness or syndrome than expected in a certain location during a certain (usually short) timeframe. This definition also includes those biological agents found in the environment and/or diagnosed in animals. Biological disease outbreaks include zoonotic disease(s) and/or an increase in the population of disease-carrying species that have the potential for transmission to humans, including vectors of vector-borne illnesses. * This hazard serves as an overarching category for other hazards with similar public health and medical response activities to include Biological Terrorism – Communicable, Biological Terrorism - Non-Communicable and Pandemic Influenza. Biological Disease Outbreak will be the hazard measured as a proxy for all these hazard types.
Conventional Terrorism	The unlawful use of force and violence against persons or property to intimidate or coerce a government, the civilian population, or any segment thereof, in furtherance of political and/or social objectives. May also include attempted or suspected terrorist intentions that have been successfully thwarted through investigative activity. For the purposes of this analysis, conventional terrorism includes all terrorism except agricultural, biological, chemical, or radiological terrorism which are covered in other hazards in this analysis.
Hazard Name	Definition
Hurricane / Tropical Storm* / Severe Weather	A low-pressure area of closed circulation winds that originates over tropical waters. When sustained wind speeds exceed 39 miles-per-hour (mph), they are called tropical storms; when wind speeds exceed 74 mph, they are called hurricanes. * This specific hazard serves as an overarching category for other hazards with similar public health and medical response activities, to include Storm Surge. Hurricane/Tropical Storm will be the hazard measured as a proxy for both hazard types. Severe weather refers to any dangerous meteorological phenomena with the potential to cause damage, loss of power, serious social disruption, or loss of human life. Types of severe weather phenomena vary, depending on the latitude, altitude, topography, and atmospheric conditions.

Hazard Name	Definition
Mass Casualty Incidents	An incident that generates a sufficiently large number of casualties, whereby the available health care resources or their management systems are severely challenged or unable to meet the health care needs of the affected population.
Mass Population Surge	The population of an area is increased, due to a migration/ relocation of another community.

2021 Integrated Preparedness Plan Workshop (IPPW) Process

We were unable to conduct an in-person Integrated Preparedness Plan Workshop (IPPW), due to activation of BPR, HCC, and CHD staff in responding to the novel *Coronavirus disease (COVID-19)* Pandemic. While activation for COVID-19 began on February 27, 2020, it is currently ongoing as of April 30, 2021. Hence in the absence of CHD participation, the 2022-2024 IPP reflects HCC training and exercise needs.

Throughout the IPP/IPPW process, virtual meetings were held with the HCCs, including a final meeting to complete each of their 2022-2024 IPP submissions. These individual meetings were conducted via online Zoom or Microsoft Teams technology. The purpose of each was to determine training and exercise gaps, identify current and projected priorities, as well as discuss inputs to their 2022-2024 IPP. An online survey via Survey Monkey was sent to HCC voting representatives to determine their top three training and tabletop exercise entries to be developed by T&E for Fiscal Year 2021-2022.

We identified training and exercise needs among the seven (7) regions, with input from all 10 HCCs. After receiving all suggestions, the HCCs were asked through an online survey to pick their top three (3) training and top three (3) tabletop (TTX) exercises from an integrated list.

Training Development Priorities

The top three (3) trainings are listed below with their associated capability and priority.
The Bureau of Preparedness and Response (BPR), T&E Section will develop these during the 2021-2022 grant cycle:

Health Care Coalitions

Capability	Priority
Training Priority #1: Medical Surge	Pediatric Surge (All Hazards)
Training Priority #2: Medical Surge	Burn Training
Training Priority #3: Responder Safety and Health	Mental Health Resilience Training for the Healthcare & Public Health Sectors

Tabletop (TTX) Exercise Development Priorities

The top three (3) TTX are listed below with their associated capability and priority.
The BPR, T&E Section will develop these during the 2021-2022 grant cycle.

Health Care Coalitions

Capability	Priority
TTX Priority #1: Medical Surge	Burn TTX
TTX Priority #2: Medical Surge	Chemical/Radiation TTX
TTX Priority #3: Medical Surge	Pediatric Surge TTX

2022 IPPW Process Projection

In 2022, the FDOH and FDEM will work together towards next year's regional Integrated Preparedness Plan (IPP), to ensure preparedness activities are built into training and exercise plans. This will allow stakeholders to have a more comprehensive understanding of their capabilities, as well as develop a whole community approach to ever-changing threats, hazards, and risks in their regions.
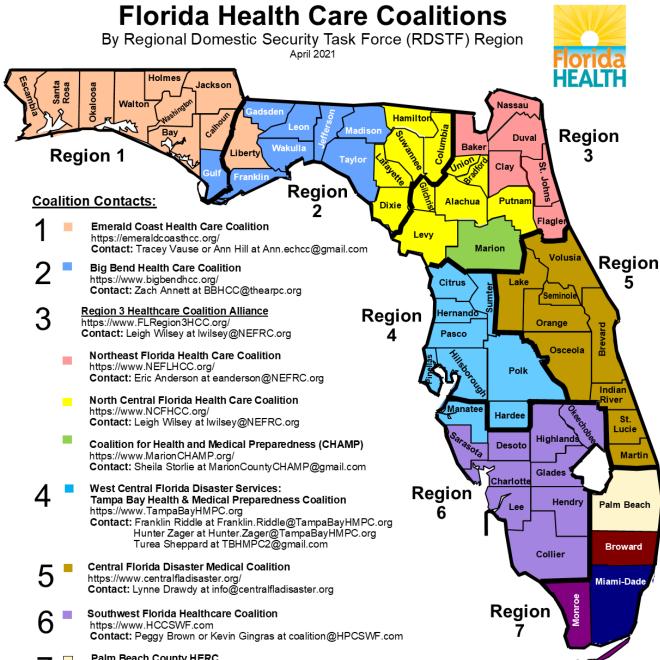

Methodology and Tracking

Strategies for supporting 2022-2024 training and exercise needs:
1) Engage HCC's in identifying training and exercise needs for the health care workforce.
2) Coordinate with HCC's to develop, review, approve, deliver, and evaluate training and exercises for the health care workforce.
3) Manage a system for training and exercise activities.

Additional Details
