

# Keep Your Generator

## ▶ Outside. Away. And Dry.

**Generators quickly produce high Carbon Monoxide (CO) levels that may cause death. You can't see or smell CO.**

- ▶ **NEVER** use a generator indoors or in partially enclosed spaces like garages.
- ▶ **LOCATE** generators outdoors, at least 20 feet away from doors, windows, vents that attach to the side of your house and air conditioning units that could pull CO indoors.
- ▶ **USE** battery-operated CO alarms in your home that have met the latest safety standards.
- ▶ **FOLLOW** the manufacturer's instructions for generators and CO alarms.
- ▶ **TEST** CO alarms frequently.
- ▶ **GET FRESH AIR IMMEDIATELY** if you feel sick, dizzy or weak.

**Opening doors and windows or using fans WILL NOT prevent CO poisoning.**

If you suspect CO poisoning, call the **Florida Poison Information Center: 1-800-222-1222.**

**If a person has collapsed or is not breathing, call 911 immediately.**
