No person shall, on the grounds of age, color, disability, national origin, race, religion, or sex be excluded from participation in , be denied the benefits of, or be subjected to discrimination under any program or activity receiving or benefiting from federal financial assistance.

## Planting the Appropriate Ground Cover

# Lead Poisoning and Soil

# Prevention

## What is lead poisoning?

- Lead is a metal found in many things around us, including lead-based paint, dust, soil, water, and lead-glazed pottery
- You can eat, drink, or breathe in lead.
- When too much lead gets into your body, it is called lead poisoning
- Children are at greater risk than adults
- Lead poisoning can cause learning, hearing, and behavioral problems

## Why is soil a problem?

- Contamination of soil has been linked to weathering of exterior leaded paint, fall-out from past use of leaded gasoline, and lead smelters.
- There is greater chance of contact with lead in the soil if there is not a good stand of grass or other ground cover.
- Any time soil is bare and exposed there is a chance that lead dust can be generated.

## How are children at risk?

- When children play in bare areas of the yard and along the house foundation, they can come in contact with lead contaminated soil easily.
- Children can swallow the dust, eat the soil directly, or place in their mouths objects that have come in contact with contaminated soil.
- Lead dust can also be carried into the home on shoes, clothing, and toys.

## What are some problem areas around the home?

- **Soil near home**  
Lead-based paint on exterior surfaces goes through a great deal of weathering. As the paint breaks down, the lead drops to the ground and produces a region of high lead contamination.
- **Soil near street**  
Soil near busy streets can contain large amounts of lead due to the past use of leaded gasoline.
- **Play areas**  
Play areas can be a common source of lead because of the bare soil
- **Pet areas**  
Frequently the soil is bare due to the constant movement of the animal

## How can I protect my children?

- Plant shrubs near the walls of the home to prevent contact with contaminated soil
- Replace or cover the soil with uncontaminated soil, mulch, a good stand of grass, shrubs, pavement, or concrete.
- Re-sod or reseed any bare spots in the yard. A healthy stand of grass will keep the dust down.
- Do not grow vegetables and other edible plants along the edges of your home
- Leave shoes at the door before entering home.
- Wash children's hands and toys after playing outside

## Shrubs to Consider:

### Aralias

Size: 2-25 feet

Light: full sun to partial shade

### Blue Porterweed

Size: 12-36 feet

Light: full sun to partial shade

### Butterfly Bush

Size: 6-12 feet

Light: full sun to partial shade

### Crepe Myrtle (dwarf)

Size: 8-25 feet

Light: full sun

### Croton

Size: 5-10 feet

Light: full sun

### Dracaena

Size: 15 feet

Light: partial to full shade

### Dwarf Schefflera

Size: 6-15 feet

Light: full sun to partial shade

### Jamaica Caper

Size: 18 feet

Light: full sun to partial shade

### Pittosporum

Size: 10-15 feet

Light: full sun to partial shade

### Plumbago

Size: 3-10 feet

Light: full sun

### Podocarpus

Size: 5-40 feet

Light: full sun to partial shade

### Saw Palmetto

Size: 3-8 feet

Light: full sun to partial shade

### Spicewood

Size: 5-25 feet

Light: partial shade

### Thryallis

Size: 3-5 feet

Light: full sun to partial shade

### Varnish Leaf

Size: 18 feet

Light: full sun to partial shade
