

Florida Arbovirus Surveillance Week 6: February 8-14, 2026

Arbovirus surveillance in Florida includes endemic mosquito-borne viruses such as West Nile virus (WNV), Eastern equine encephalitis virus (EEEV), and St. Louis encephalitis virus (SLEV), as well as exotic viruses such as dengue virus (DENV), chikungunya virus (CHIKV), Zika virus (ZIKV), and California encephalitis group viruses (CEV). Malaria, a parasitic mosquito-borne disease, is also included. During the period of February 8-14, 2026, the following arboviral activity was recorded in Florida.

[This report contains information for 2025 and 2026.](#)

WNV activity: No human cases of WNV infection were reported this week. No horses with WNV infection were reported this week. One sentinel chicken tested positive for antibodies to WNV in Volusia County. In 2025, positive samples from six symptomatic humans, seven asymptomatic blood donors, one horse, one duck, and 402 sentinel chickens have been reported from 29 counties. In 2026, a positive sample from one sentinel chicken has been reported from one county.

SLEV activity: No human cases of SLEV infection were reported this week. No sentinel chickens tested positive for antibodies to SLEV this week. In 2025, positive samples from four sentinel chickens have been reported from three counties.

EEEV activity: No human cases of EEEV infection were reported this week. No horses with EEEV infection were reported. No sentinel chickens tested positive for antibodies to EEEV. In 2025, positive samples from nine horses, two emus, one emu flock, one goat, one bird, and 62 sentinel chickens have been reported from 22 counties.

International Travel-Associated Dengue: Four cases of dengue were reported this week in persons that had international travel. In 2025, 432 travel-associated dengue cases have been reported. In 2026, 11 travel-associated dengue cases have been reported.

Dengue Cases Acquired in Florida: No cases of locally acquired dengue were reported this week. In 2025, positive samples from 62 humans and four mosquito pools have been reported from four counties.

International Travel-Associated Chikungunya Fever Cases: Eighteen cases of chikungunya fever were reported this week in persons that had international travel. In 2025, 386 cases of travel-associated chikungunya fever have been reported. In 2026, 18 cases of travel-associated chikungunya fever have been reported.

Chikungunya Fever Cases Acquired in Florida: No cases of locally acquired chikungunya fever were reported this week. In 2025, one case of locally acquired chikungunya fever has been reported.

International Travel-Associated Oropouche Fever cases: No cases of Oropouche fever were reported this week. In 2025, one case of travel-associated Oropouche fever has been reported.

International Travel-Associated Zika Fever Cases: No cases of Zika fever were reported this week in persons that had international travel. In 2025, no travel-associated Zika fever cases have been reported.

Zika Fever Cases Acquired in Florida: No cases of locally acquired Zika fever were reported this week. In 2025, no cases of locally acquired Zika fever have been reported.

Advisories/Alerts: Leon County is currently under a mosquito-borne illness advisory. Miami-Dade County is currently under a mosquito-borne illness alert.

There are currently multiple travel health notices from the Centers for Disease Control and Prevention related to mosquito-borne diseases.

Dengue			Oropouche	Yellow Fever	Chikungunya			Malaria
Africa and Middle East	Americas	Asia and the Pacific Islands	Americas	Americas	Africa	Americas	Asia	Africa
Mali	Colombia	Afghanistan	Brazil	Colombia	Seychelles	Bolivia	Sri Lanka	Ethiopia

		Samoa	Peru					
		Vietnam						

Level 1 Travel Health Notice, Level 2 Travel Health Alert: wwwnc.cdc.gov/travel/notices.

For a map of arboviral disease activity in the United States visit: <https://www.cdc.gov/fight-the-bite/at-risk/index.html>.

2025-2026 Human Case Summary

2025 West Nile Virus Illness Acquired in Florida: In 2025, six human cases of WNV illness acquired in Florida have been reported in Clay (July), Duval (August), and Escambia (August, October) counties. Seven asymptomatic blood donors have been reported in Bay (October), Escambia (June, July, August), Miami-Dade (July), and St. Johns (June) counties.

2025 International Travel-Associated Oropouche Cases: One case with onset in 2025 has been reported in an individual with travel history to an Oropouche-endemic area in the two weeks prior to onset. County reporting the case was Miami-Dade. Country of origin was Cuba.

2025 International Travel-Associated Chikungunya Cases: Three hundred eighty-six cases with onset in 2025 have been reported in individuals with travel history to a chikungunya-endemic area in the two weeks prior to onset. Counties reporting cases were: Brevard, Broward (37), Charlotte, Clay, Collier (9), Flagler, Hendry, Hillsborough (31), Lake, Lee (17), Marion (2), Miami-Dade (254), Orange (5), Osceola (3), Palm Beach (5), Pasco (2), Pinellas (4), Polk (2), Sarasota (4), Seminole (3), Volusia (2). Six cases were reported in non-Florida residents. Countries of origin were: Bangladesh (2), Bolivia, Brazil (2), Colombia, Cuba (373), India (2), Indonesia, Philippines, Sri Lanka (2), Thailand (1).

2026 International Travel-Associated Chikungunya Cases: Eighteen cases with onset in 2026 have been reported in individuals with travel history to a chikungunya-endemic area in the two weeks prior to onset. Counties reporting cases were: Alachua, Hillsborough, Miami-Dade (11), Monroe, Orange (2), and Palm Beach (2). Country of origin was: Cuba (18).

2025 Chikungunya Cases Acquired in Florida: One case of locally acquired chikungunya fever has been reported in Miami-Dade County with onset in December.

2025 International Travel-Associated Dengue Cases: Four hundred thirty-two cases with onset in 2025 have been reported in individuals with travel to a dengue-endemic area in the two weeks prior to onset. Counties reporting cases were: Bay, Brevard (2), Broward (22), Charlotte, Citrus, Clay, Collier (7), Duval (5), Escambia, Hendry (2), Hernando (2), Hillsborough (27), Indian River, Lake (4), Lee (17), Manatee (2), Marion, Miami-Dade (272), Monroe (6), Okeechobee (3), Orange (10), Osceola (4), Palm Beach (14), Pasco (2), Pinellas (8), Polk (5), Sarasota (3), Seminole, St. Johns, St. Lucie (4), and Volusia (2). Thirteen cases were reported in non-Florida residents. In 2025, 364 cases of dengue reported in Florida have been serotyped by PCR. Please see the table below for a breakdown of cases by country of origin and serotype.

Country of Exposure	DENV-1	DENV-2	DENV-3	DENV-4	DENV2/ DENV3	Unknown	Total
Antigua and Barbuda			1				1
Argentina	2						2
Bahamas			1				1

Total	7	48	85	223	1	68	432

2026 International Travel-Associated Dengue Cases: Eleven cases with onset in 2026 have been reported in individuals with travel to a dengue-endemic area in the two weeks prior to onset. Counties reporting cases were: Broward (2), Lake, Miami-Dade (3), Orange, Osceola, Palm Beach, Polk, and St. Lucie. One case was reported in a non-Florida resident. In 2026, 11 cases of dengue reported in Florida have been serotyped by PCR. Please see the table below for a breakdown of cases by country of origin and serotype.

Country of Exposure	DENV-2	DENV-3	DENV-2/ DENV 3	Total
Cuba	1	1	1	3
Guyana	1			1
India	1			1
Indonesia	1			1
Italy	1			1
Mexico		1		1
Nicaragua		1		1
Puerto Rico		2		2
Total	5	5	1	11

2025 Dengue Cases Acquired in Florida: In 2025, 62 cases of locally acquired dengue have been reported in Brevard (35), Hillsborough, Miami-Dade (25), and Pasco counties with onset in February, May, June, July, August, September, October, and November. One case was reported in a non-Florida resident. Forty-eight cases have been serotyped by PCR. Please see the table below for a breakdown by county and serotype.

County of Exposure	DENV-1	DENV-2	DENV-3	DENV-4	Unknown	Total
Brevard			24		11	35
Hillsborough				1		1
Miami-Dade		7	3	12	3	25
Pasco	1					1
Total	1	7	27	13	14	62

2025 International Travel-Associated Malaria Cases: Forty-nine cases with onset in 2025 have been reported in individuals with travel history to a malaria-endemic area. Counties reporting cases were: Alachua (2), Brevard, Broward (5), Collier, Duval (2), Hillsborough (5), Lake, Leon, Manatee, Marion (2), Miami-Dade (5), Nassau (2), Orange (5), Palm Beach (4), Pasco, Polk (3), Sarasota, Seminole, St. Lucie (4), and Volusia (2). Eleven cases were reported in non-Florida residents. Please see the table below for a breakdown of cases by country of origin and *Plasmodium* species.

Country of Exposure	<i>Plasmodium falciparum</i>	<i>Plasmodium ovale</i>	<i>Plasmodium vivax</i>	Unknown	Total
Africa	4				4
Angola	1				1
Brazil			1		1
Burkina Faso	1				1
Cameroon	1				1
Central America			1		1
Central Africa	1				1
Central/South America			2		2
Côte D'Ivoire	1				1
Gambia	1				1
Ghana	2				2
Guinea	1				1
Haiti	1				1
Honduras			1		1
India			1		1
Liberia	2				2

Total	38	2	8	1	49

2026 International Travel-Associated Malaria Cases: Four cases with onset in 2026 have been reported in individuals with travel history to a malaria-endemic area. Counties reporting cases were: Broward and Miami-Dade (3). Please see the table below for a breakdown of cases by country of origin and *Plasmodium* species.

Country of Exposure	<i>Plasmodium falciparum</i>	Total
Cameroon	1	1
Gabon	1	1
Nigeria	2	2
Total	4	4

Veterinary Cases**

**Veterinary cases are reported by date of onset. Only mammalian veterinary cases are included in the graphs.

No veterinary cases were reported this week.

Sentinel Chickens

The table below is for the reporting of confirmatory laboratory results from this week. Some of the samples were collected at earlier dates. The date of collection is recorded for samples collected on that day along with the total number of positives and the corresponding seroconversion rate for the week the sample was collected.

One sentinel chicken tested positive for antibodies to WNV in Volusia County.

County	Collection Date	Seroconversion Rates (%)						County Totals	
		Flavi	SLEV	WNV	Alpha	EEEV	HJV	Collection Week	YTD
Volusia	1/26/2026	2.33		2.33				1 WNV	1 WNV

Sentinel Seroconversions to WNV in Florida, 2025–2026

Sentinel Seroconversions to EEEV in Florida, 2025–2026

Mosquito Pools

No mosquito pools tested positive for EEEV or WNV this week.

County	Collection Date	Result	Species	County YTD
--------	-----------------	--------	---------	------------

Dead Birds

The Fish and Wildlife Conservation Commission (FWC) collects reports of dead birds, which can be an indication of arbovirus circulation in an area. This week, 70 reports representing a total of 188 dead birds, including one crow, one jay, and 25 raptors were received from 26 counties.

In 2025, 1563 reports representing a total of 3778 dead birds (106 crows, 50 jays, 319 raptors, 296 doves) were received from 58 of Florida's 67 counties.

In 2026, 468 reports representing a total of 1168 dead birds (6 crows, 3 jays, 208 raptors, 9 doves) were received from 45 of Florida's 67 counties.

2026

For more surveillance information, please see the DOH website at: www.floridahealth.gov/diseases-and-conditions/mosquito-borne-diseases/surveillance.html

For arbovirus surveillance information for the United States, please see the Centers for Disease Control and Prevention website at: www.cdc.gov/ncidod/dvbid/westnile/surv&control.htm

Case tallies included in the weekly Florida arbovirus surveillance report include confirmed and probable cases for EEE, WNV infection, SLE, dengue, chikungunya, and malaria by date of onset. Suspect cases are not included. Activity is mapped by county of exposure rather than county of residence. Case definitions being used in Florida are consistent with national criteria provided by the Council of State and Territorial Epidemiologists (CSTE) and may be viewed at: www.floridahealth.gov/diseases-and-conditions/disease-reporting-and-management/disease-reporting-and-surveillance/index.html. Case tallies reported by CDC do not include suspect cases and cases are reported by patient state of residence rather than where the exposure occurred. Data is provided by county health departments, Department of Health Bureau of Public Health Laboratories, Department of Agriculture and Consumer Services, mosquito control agencies, Florida Fish and Wildlife Conservation Commission, medical providers and veterinarians. Equine cases are provided by the Department of Agriculture and Consumer Services.
