Introduction

Beginning in November of 2016, the Florida Department of Health in Hardee County (DOH-Hardee) and the Hardee County Health Care Task Force (HCTF) led the process to produce a Hardee County Community Health Assessment (CHA). This CHA is the result of a two-year long process seeking to identify the major health and social issues affecting the health status and quality of life in our community. The CHA provides a snapshot in time of the community strengths, needs, and priorities.

The HCTF is comprised of a diverse group of public, private, non-profit, social services, and government entities that make up the public health system in Hardee County. The HCTF and DOH-Hardee used a nationally recognized model called MAPP (Mobilizing for Action through Planning and Partnership) to conduct the 2018 CHA. This strategic planning tool is a community-wide strategy for improving community health developed by the National Association of County and City Health Officials (NACCHO) and the Centers for Disease Control and Prevention (CDC). The MAPP process is described on the following page.

The CHA examines differences in health outcomes and their causes among groups of people, or health disparities, to help achieve health equity.

This document aims to:

- Accurately identify Hardee County's key health issues.
- Identify strategic health planning issues.
- Provide insight and input to the next phase of the MAPP assessment (i.e., development of the Hardee County 2019-2023 Community Health Improvement Plan [CHIP]).
- Provide the community with a rich data resource, not only for the next phase of CHIP creation, but also for ongoing program development and implementation as well as evaluation of community health improvements

Previous Assessment

A previous MAPP assessment was completed in 2013 which led to the 2014-2018 Community Health Improvement Plan.

Rates:

Since each county or region has different sized populations, one way to compare rates of specific diseases or behaviors is to use a ratio. Ratios and percentages are both used to discuss population trends; however, a ratio can be used to reflect disease rates that are too small for a percentage. For example, if there are 120 cases of malaria in a county with a population of 100,000, the rate is 120 out of 100,000. If you tried to use a percentage to describe malaria in this situation, the percentage would be 0.12% which would be more difficult to compare. Rates are usually calculated per 100,000 people, although some data sources calculate rates per 1,000 people.

At times, the data in this report will refer to a number known as the “Age-Adjusted Death Rate” or “Age-Adjusted Incidence.” An Age-Adjusted Rate is a measure that controls for the effects of differences in population age distributions. Across different geographic areas, there will be different sized age groups (example: college town vs. retirement community). When comparing across geographic areas, some method of age-adjusting is typically used to control for the influence that different population age distributions might have on health event rates.

Limitations:

In conducting a MAPP assessment, listening to the community is essential for identifying the important issues and formulating possible solutions. Surveys and group discussions were used to gain feedback from members of the community, policy makers, and providers. While this was an assessment for planning purposes and not a research project, we must consider some limitations in reviewing the feedback. These limitations include having a relatively small sample size. Therefore, while we can make some assumptions related to these results, we must be mindful that the sample cannot be generalized to the entire population of the county.

Methodology

Mobilizing for Action through Planning and Partnerships (MAPP) was used to conduct the assessment. The MAPP process is a community-driven strategic planning process for improving community health.

The MAPP process has six phases that build upon each other and includes four individual assessments that help to understand the needs of a community and to inform the development, implementation, and evaluation of community health improvement plans.

Community Themes & Strengths Assessment

Answers questions such as: “How is quality of life perceived in our community?” and “What is important to our community?”. This assessment results in an understanding of community issues and concerns, perceptions about quality of life, and community assets. Community meetings were held on November 4, 2016 and February 3, 2017. Between May-October 2017, 278 surveys were collected from Hardee County residents at various locations and events.

Forces of Change Assessment (FOC)

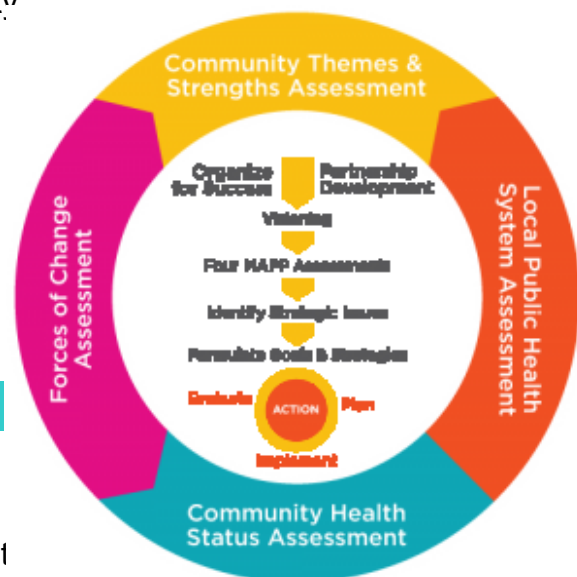

The FOC exercise allowed participants to identify forces – such as trends, events, or factors – that are or will be affecting the community or local public health system. A session was held on July 26, 2018 in which participants were asked to brainstorm strengths and weaknesses that could impact the community.

Local Public Health System Assessment (LPHSA)

On March 27, 2018 stakeholders measured capacity and performance of the local public health system and entities that contribute to the public’s health. The LPHSA answers the questions, “What are the components, activities, competencies, and capacities of our local public health system?”

Community Health Status Assessment

During the Health Care Task Force meetings held from January 2017- June 2018, attendees assessed data about health status, quality of life and risk factors in the community.

Summary of Findings (Appendix A-D)

Community Themes and Strengths Assessment

The below topics were identified through community surveys and meetings as areas of concern representing opportunities for improvement:

- Focus on expanding community partnerships
- Community commitment to education (high drop-out rates, continuing education including vocational)
- Chronic Disease (overweight and obesity, nutrition education for all ages, diabetes)
- Access to affordable healthcare (limited healthcare providers)
- Health literacy
- Drug and alcohol abuse
- Teen pregnancy

Forces of Change Assessment

The items below are trends, events, or factors that were identified during the Forces of Change Assessment.

- Trending drug abuse issues (opioids, medical/recreational marijuana, e-cigarettes)
- Natural disasters
- Immigration (laws/changes)
- Telehealth/Telemedicine
- Mental Health
- Technology advancement (communication)

Local Public Health System Assessment

The Essential Services identified received a low average performance score and received a high priority rating.

- Essential Service #3: Inform, educate, and empower people about health issues
- Essential Service #4: Mobilize community partnerships to identify and solve health problems
- Essential Service #7: Link people to needed personal health services and assure the provision of health care when otherwise available
- Essential Service #8: Assure a competent public health and personal health care workforce
- Essential Service #9: Evaluate the effectiveness, accessibility, and quality of personal and population-based health services

Community Health Status Assessment

During data review the following were noted areas of concern:

- Education (graduation rates, higher education)
- Chronic Disease (overweight and obesity, heart disease, diabetes)
- Cancer
- Access to care
- Substance Abuse and Mental Health

Demographic and Socio-Economic Characteristics

Population Overview

Hardee County with a population of just over 27,000, is in Central Florida (Fig. 1). Hardee County is the 51st most populous county in Florida out of 67 counties. The county is adjacent to the following counties: Polk to the north; Manatee to the west; Hillsborough to the north west; Highlands to the east; and Desoto to the south. Wauchula is the county seat, with a population just over 5,000, according to the 2010 Census. Hardee County is approximately 638 square miles in area.

Hardee County was established in 1921 from a portion of Desoto County and named for Cary Augustus Hardee, who was governor the year the county was formed. Wauchula was the site of a military post built during the Seminole Wars.

Hardee County's major industry is agriculture which includes: citrus, cattle and calves, milk from cows, vegetables, melons, potatoes, and sweet potatoes.

Figure 1:

Source: Florida Legislature Office of Economic and Demographic Research and 2012 Census of Agriculture County Profile

Race and Ethnicity

Hardee County has a predominately White population as illustrated by the racial breakdown in Chart 1. Per current data from the Florida Community Health Assessment Resource Tool Set (CHARTS), of residents who reported being of one race, about 88.5% are White and about 7.6% are black. Collectively, Asian, Native American Indian, Native Alaskan, Native Hawaiian, and Pacific Islander accounted for 3.9% of the population. About 44.3% of the population also reported being of Hispanic or Latino origin compared to the state at 25% (Chart 2).

Chart 1

Source: Florida CHARTS

Chart 2

Source: Florida CHARTS

Age

Approximately 36.7 percent of the population in Hardee is under the age of 25 and approximately 15.5 percent are 65 or older (Chart 3). The median age for residents of Hardee County (34.3) is younger than the median age of residents of Florida (41.6) (Table 1).

Table 1

Median age, Single Year Rates		
	Hardee	Florida
Year	Years of Age	Years of Age
2016	34.3	41.6

Source: Florida CHARTS

Gender

There are more men than women in Hardee County. The ratio of males (52.8%) to females (47.2%) shows slightly more males than females; statewide the percentages are 51.1 percent female and 48.9 percent male.

Chart 4

Source: U.S. Census Bureau QuickFacts

Socioeconomic Indicators

The figures shown below show some of the primary indicators of economic health for the county and state. Hardee County has consistently stayed above the state on the percent of families below poverty level (Chart 5).

Table 2 indicates that those who are Black or Other Race are more likely to live below the poverty level than those who are White. Hispanics are also more likely than Non-Hispanics to live below the poverty level.

The unemployment rate in Hardee county is 6.7% which is higher than the state rate of 4.9% (Table 3). Hardee has continuously been above the state rate for unemployment. The median salary in Florida is \$48,900, while in Hardee county it is \$36,222 (Table 4) which is a difference of \$12,678.

Of households led by a single female (no husband present), 51.7% are living below the poverty level in Hardee County compared to the state percentage of 28.1% (Table 5). 25 percent of residents receive food stamp/SNAP benefits compared to 14.8 percent of the state (Table 6).

The U.S. Census Bureau American Community Survey 2012-2016 5 year estimates indicate that 65.3% of Hardee County resident's household income is below \$49,999.00 with 47.9% of resident's household income being less than \$34,999.00 (Table 7).

Table 8 shows 19.2% of Hardee County residents that are over the age of 5 speak English less than very well. This number is slowly declining; however, we are still above the state rate of 11.7%.

Table 9 shows that Hispanics have health insurance at a lower rate than Non-Hispanics. Also, those who are Other Race have health insurance at a lower rate than Black or White.

Table 10 shows Hardee County's high school graduation rate for the last 5 school years. The graduation rate has increased since the 2014-2015 school year by 12.4%. On-time high school graduation rate is among the 26 leading health indicators for Healthy People 2020.

Table 11 indicates that Hispanics are more likely to be 25 years and over with no high school diploma. Also, those who are Other Race.

Only 9.6 percent of residents have a Bachelor's degree or higher and 31.1 percent have no high school diploma (Chart 6). Education is one of the (5) key areas of social determinants of health. Dropping out of school was also identified as one of the most urgent risks to health and safety (Community Health Survey).

County Health Rankings

Each year County Health Rankings and Roadmaps, a collaboration between the Robert Wood Johnson Foundation and the University of Wisconsin Population Health Institute, releases a report that ranks the health of nearly every county in the nation. The rankings include health outcomes like length of life and quality of life and health factors such as: health behaviors, clinical care, social and economic factors, and physical environment. These rankings are based on a variety of factors that affect the health of the county's residents such as unemployment, levels of physical inactivity, and rates of smoking, obesity, and children living in poverty.

Hardee County currently rates 33rd for health outcomes and 62nd for health factors out of 67 counties. Please note that the desired ranking is a lower number. Overall the rankings have improved from 2016 except for social and economic factors and physical environment. (Table 12)

Table 12

Measures for Health Outcomes and Health Factors for Hardee County, FL, 2013-2018 (Ranks based on 67 counties)

Health Outcomes

Leading Causes of Death

One of the best strategies for measuring health and well-being is by examining a community's rates of disease and death. A significant number of Hardee County's death are premature and preventable. In Hardee County, premature disease and death are primarily attributable to chronic health issues.

The five major causes of death in 2017 for Hardee County include:

- Cancer
- Heart Disease
- Unintentional Injury
- Stroke
- Diabetes

Heart disease and cancer are the leading causes of death in the State of Florida and Hardee County. Hardee County has a higher rate in unintentional injury, stroke, and diabetes than the state. (Table 13)

Table 13
Leading Causes of Death 2017 Age-Adjusted Death Rate per 100,000

Causes of Death	Hardee	Florida
Cancer	148.6	149.4
Heart Disease	140.4	148.5
Unintentional Injury	79.7	56.0
Stroke	48.2	39.6
Diabetes	44.6	29.9

Source: Florida CHARTS

Length of Life

Hardee County females live on average a year less than their female counterparts in Florida and ½ a year less than the national average.

Life Expectancy at Birth (years), 2014

Sex	Hardee	Florida	National
Female	81.0	82.0	81.5
Male	76.4	76.9	76.7

Source: Institute for Health Metrics and Evaluation

Chronic Disease

Per the Centers for Disease Control (CDC), chronic diseases are defined broadly as conditions that last 1 year or more and require ongoing medical attention or limit activities of daily living or both.

In surveys collected, residents of Hardee County rated chronic diseases as one of the greatest health issues affecting the community (Community Health Survey).

In 2017 the leading causes of death in Hardee County included cancer, heart disease, stroke and diabetes, all of which are chronic diseases. Chronic diseases such as heart disease, cancer, and diabetes are the leading causes of death and disability in the United States (CDC).

Chronic diseases may be caused by or be exacerbated by risk behaviors including: tobacco use, poor nutrition, excessive alcohol use, and lack of physical activity.

Adults who have ever been told they have angina, coronary disease, a heart attack, or a stroke are all higher in Hardee County than for the State of Florida. (Chart 7) Hospitalizations are also higher than the states numbers for all areas also including heart failure. (Chart 8)

Chart 7

Chart 8

Source: Florida CHARTS

Black Hardee county residents are more likely to have congestive heart failure and coronary heart disease. They are more than twice as likely to have a stroke. (Chart 9) Hispanics are slightly more likely to have a stroke than Non-Hispanics. (Chart 10)

Chart 9

Source: Florida CHARTS

Chart 10

Source: Florida CHARTS

Cancer

Cancer is the leading cause of death in Hardee County. The National Cancer Institute describes cancer as the name given to a collection of related diseases. In all types of cancer, some of the body's cells begin to divide without stopping and may spread into surrounding tissues. Risk factors associated with cancer include: age, alcohol, diet, tobacco, obesity, sunlight, and others.

The age adjusted death rate for the last 3 years has risen from 132.3 in 2015 to 148.6 in 2017 (Table 14).

Chart 11 shows the age adjusted cancer incidence rate from 2005-2015. The rate was the highest in 2014. The rate then dropped in 2015.

Hardee County residents have a higher incidence of colorectal cancer than the state. Less adults (50 years of age and older) have received a sigmoidoscopy or colonoscopy than their counterparts throughout the state. There is also a higher death rate than for lung cancer deaths in Hardee. Hardee performed slightly better in melanoma deaths and incidences (Table 15).

Table 14

Cancer Age-Adjusted Death Rate, Single Year Rates				
	Hardee		Florida	
Years	Count	Rate	Count	Rate

Source: Florida CHARTS

Diabetes

Diabetes is one of the top 5 leading causes of death in Hardee. Diabetes is a chronic disease that affects how your body turns food into energy and results in too much sugar in the blood. The American Diabetes Association reports that 30.3 million Americans had diabetes in 2015, and 7.2 million of them were undiagnosed.

People with diabetes are more likely to have heart disease or a stroke. Diabetes is also the leading cause of kidney failure, lower-limb amputations, and adult-onset blindness.

Risk factors for developing diabetes include:

- Prediabetes
- Being overweight
- Being 45 years or older
- Having a parent, brother, or sister with diabetes
- Being physically active less than 3 times per week
- Having gestational diabetes (diabetes during pregnancy) or giving birth to baby who weighed more than 9 pounds
- Being African American, Hispanic/Latino American, American Indian, or Alaska Native (some Pacific Islanders and Asian Americans are also at higher risk)

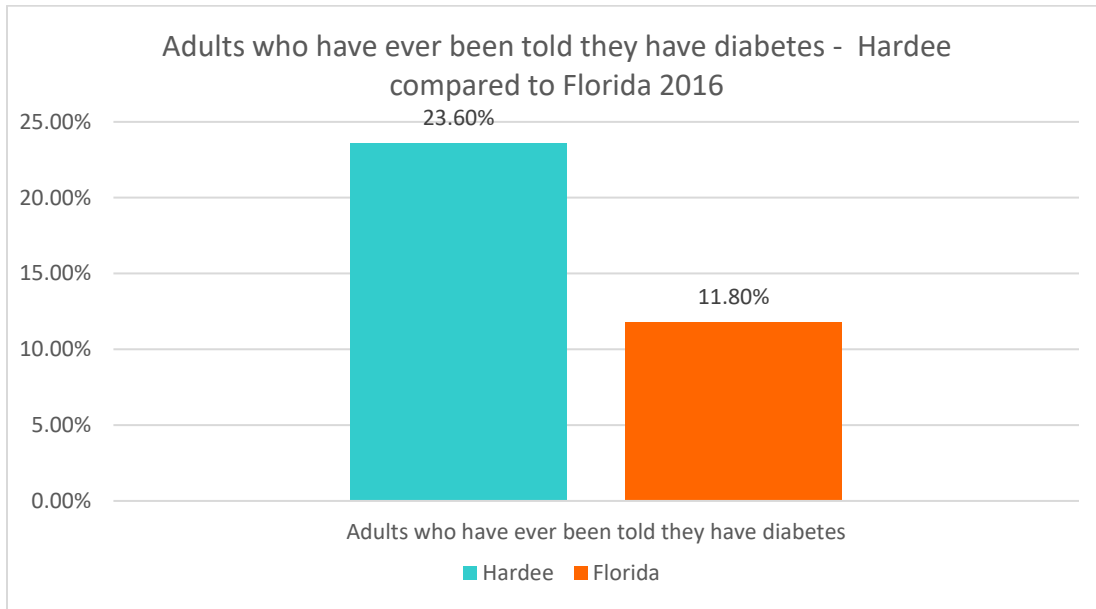

Ways to prevent or delay diabetes are losing weight if you are overweight, eating healthier, getting physical activity regularly.

Diabetes Self-Management Education and Support services are available for those diagnosed and help people learn how to best take care of themselves.

Central Florida Health Care and Florida Hospital collaborate to provide Food is Medicine, an 8-week free diabetes class. This class provides education on diabetes, eating healthy, and staying active. Participants also receive a \$10 voucher to purchase fresh fruits and vegetables at a food truck following each class.

Twice the number of Hardee County residents have ever been told they have diabetes (23.6%) compared to Floridians (11.8%) (Chart 12). Black and Hispanic residents are more likely to be hospitalized due to diabetes than Non-Hispanic and White residents (Chart 13).

Chart 12

Source: Florida CHARTS

Chart 13

Source: Florida CHARTS

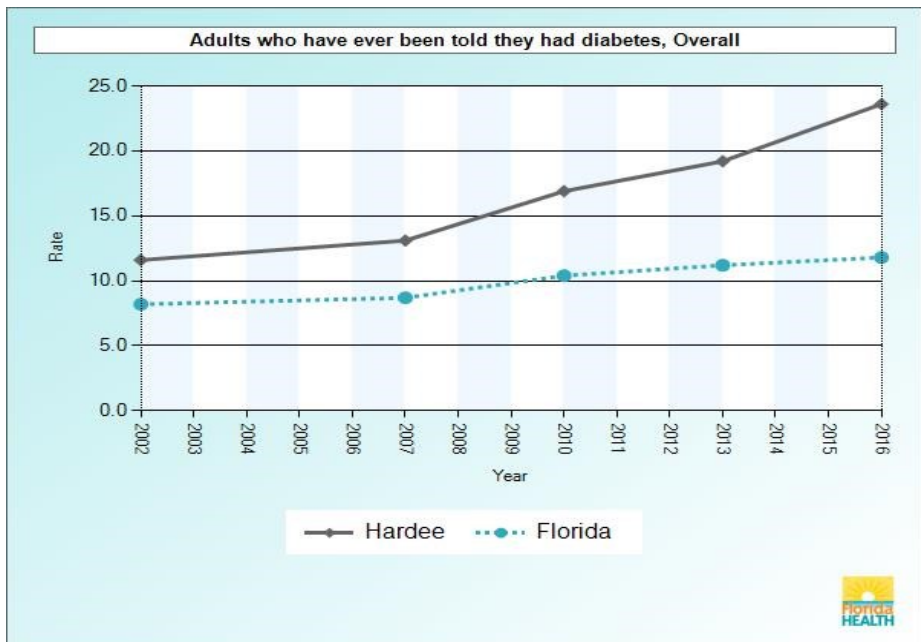

Age adjusted hospitalizations have been increasing overall in Hardee and Florida (Chart 14). Adults who have ever been told they have diabetes has also increased overall (Chart 15).

Chart 17

Source: Florida CHARTS

Modifiable Risks and Behaviors

Most common chronic diseases share risk factors. These include tobacco use, alcohol use, an unhealthy diet, and physical inactivity.

In 2017, Hardee County residents ranked overweight and obesity as one of the greatest health issues and being among the most urgent risks in Hardee (Community Health Survey).

Physical inactivity and unhealthy diet, along with lack of access to affordable healthy food all play a factor in being overweight or obese.

Table 16 shows some of the top indicators for Hardee County compared to the state rate. There is an 11.1% difference between Hardee County and the State of Florida obesity rates with Hardee adults at a 38.5% rate and the state rate of 27.4%. Hardee County performs worse in all indicators except adults who are overweight where there is only a 1.9% difference. The Hispanic rate of obesity is 45.5% while the Non-Hispanic rate is 34.7%. Hispanics are also more likely to be sedentary and inactive or insufficiently active than Non-Hispanics. (Table 17)

Adults who are obese has shown an increase since 2013, while adults who are overweight has slightly decreased each year since 2010.

Chart 18 shows adults who are obese was as it highest point in 2010. There was a steady decrease from 2011-2013. 2014-2016 has shown a slight increase each year. Adults who are overweight has been decreasing since 2007 (Chart 19).

Hardee County middle and high school students are performing better in all indicators among weight, activity, and eating habits among children and teens compared to the state rates (Table 18).

Table 16

Chronic Disease Risk and Protective Factors – Hardee County 2016

Indicator	Year(s)	Rate Type	County Rate	State Rate

Diet

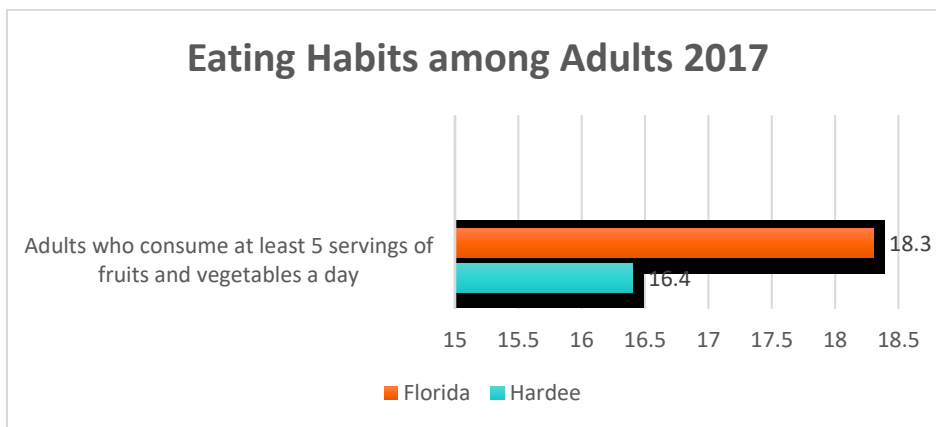

The availability of healthy, affordable foods contributes to a person's diet and risk of related chronic diseases. Fewer than 1 in 10 children and adults eat the recommended daily amount of vegetables. Only 4 in 10 children and fewer than 1 in 7 adults eat enough fruit, per the CDC.

A healthy diet lowers risk for serious health problems such as heart disease, type 2 diabetes, and obesity. Healthy eating also helps to manage chronic diseases and prevent future complications.

Only 16.4% of Hardee County residents consume at least 5 servings of fruits and vegetables a day which is less than the state at 18.3%. (Chart 20)

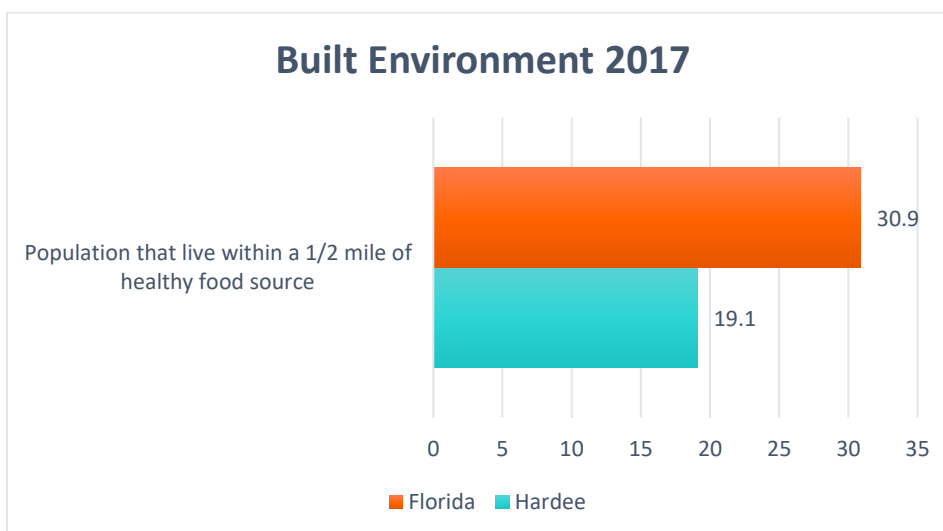

Around 30.9% of Florida residents live within a ½ mile of a healthy food source while only 19.1% of Hardee County residents live within a ½ mile of a healthy food source. (Chart 21)

Chart 20

Maternal and Child Health

In 2017, there were 353 births to mothers who reside in Hardee County. Maternal health is the health of women during pregnancy, childbirth, and the postpartum period. The cognitive and physical development of infants and children may be influenced by the health, nutrition, and behaviors of their mothers during pregnancy and early childhood (Healthy People 2020).

Many factors affect pregnancy and childbirth. This includes: age, preconception health status, and access to appropriate health care.

A goal of Healthy People 2020 is to improve the health and well-being of women, infants, children and families.

Table 19 shows birth family characteristics. Hardee County has a higher rate of births to teen mothers ages 15-19 with 41.3 per 1,000 females and the state only 19.7 per 1,000 females. Repeat births among the same age group are also higher than the state. Total births to unwed mothers is also higher than the states rate. Children are also more likely to be born to a mother 19 and over without a high school education in Hardee County.

Table 19

Birth Family Characteristics

Indicator	Rate Type	Year(s)	County Number	County Rate	State Comparison
Births to teen mothers ages 15-19	Per 1,000 females 15-19	2015-17	115	41.3	19.7
Repeat births to teen mothers ages 15-19	Percent of births 15-19	2015-17	27	23.5	15.7
Births to mothers >35	Per 1,000 females > 35	2015-17	93	4.8	4.9
Total births to unwed mothers	Percent of births	2015-17	650	57.6	47.2
Births among unwed teen mothers ages 15-19	Percent of births 15-19	2015-17	94	81.7	91.6

Emergency Room Visits for Injuries

The most common reason for an emergency room visit for a non-fatal injury in 2016 was for a fall with 158 visits. The next most common is motor vehicle traffic with 95 visits. 23 of the 87 visits occurred within the 1-4-year-old age range. Then struck by or against with 75. Falls affected people of all ages, but the majority occurred in the 55-64 and 65-74-year-old range. (Table 22)

Access to Care/Health Resources

Access to health resources was identified by residents as important for the overall health of Hardee County. 30% of respondents to the Hardee County Community Health Survey ranked access to specialty care as poor. Access to comprehensive and quality health care services is a key to achieving health equity and increases the quality of life for everyone. Access to health resources is a broad and complex issue that focuses on four main components: coverage, services, timeliness, and workforce.

This section will review health coverage of Hardee County residents including the rate of uninsured residents, licensed providers and facilities, and federal health professional shortage designations.

Coverage and Services

Uninsured people are less likely to receive medical care, more likely to die early and are more likely to have poor health status. Underinsured individuals also have a difficult time receiving the care they need due to out-of-pocket costs or deductibles that create financial barriers. 79.2% of Hardee County residents have health insurance as compared to the state rate of 83.6% (Table 23).

In 2017 the median monthly Medicaid enrollment was 7,967. This is a slight decrease from 2015 and 2016. However, the rate 28,787.7 is still higher than the state's rate 19,607.4 (Chart 22).

National research has suggested that there are four non-financial barriers that were more frequent reasons for unmet need or delayed care.

The top non-financial barriers include:

- Accommodation—busy with work or other commitments
- Availability—couldn't get appointment soon enough
- Accessibility—took too long to get to the doctor's office or clinic
- Acceptability—doctor or hospital wouldn't accept health insurance

Telehealth is the use of telecommunications and information technology to provide access to health assessment, diagnosis, intervention, consultation, supervision and information across long distances. These methods allow users to receive care, often from the comforts of their own home or where ever the appropriate technology is available. Telehealth and telemedicine may help to address some of the barriers faced by rural communities.

Physician/Facility Availability

Health Professional Shortage Area (HPSAs)

The Health Resources and Services Administration (HRSA) has designated Hardee County as a Health Professional Shortage Area (HPSAs) and a Medically Underserved Area (MUA). HPSAs are designated by HRSA as having shortages of primary care, dental care, or mental health providers and may be geographic (a county or service area), population (e.g., low income or Medicaid eligible) or facilities (e.g., federally qualified health centers, or state or federal prisons). Hardee County has received a designation for the county in primary care providers along with the Hardee Correctional Institute. Low Income/Migrant Farmworker and the Hardee Correctional Institute have received this status in dental health providers. The county and Hardee Correctional Institute also received this status for Mental Health providers.

Table 24 shows the number of licensed providers and the number of beds at facilities that serve Hardee County residents. There are 3 licensed dentists and 6 total licensed physicians making the rate 10.8 for dentists and 21.7 for physicians. This rate per 100,000 is significantly lower than the states rate of 55.8 for dentists and 310.6 for physicians.

The total number of nursing home beds is 104 making the rate 375.8. The rate per 100,000 is also lower than the states of 407.6.

Florida Hospital – Wauchula is the only hospital located in Hardee County. It is a 25-bed accredited facility offering inpatient and outpatient care and has a 13-bed emergency department. Services include: emergency care, a transitional care unit, laboratory care, and radiology, along with a mammography unit.

Central Florida Health Care is a Federally Qualified Health Center (FQHC) and aims to provide primary health care services to underserved and vulnerable populations and plays a role in filling gaps in health care services in Hardee County. They offer services in chronic care, dental health, diabetes education, enabling services, men’s health, migrant population health, nutritional counseling, pediatrics, pharmacy and women’s health.

Social and Behavioral Health

Social and behavioral health are critical aspects of maintaining physical health. Social and behavioral health include mental, emotional, and social well-being.

Crime

Crime has a direct impact on health. Violence can lead to premature death or cause injury. Victims of crimes may also experience mental distress which leads to increased mental health issues resulting from fear, anxiety, or stress.

Overall from 2016 to 2017 Hardee County's crime volume and rate decreased including violent crime and property crime (Table 25). There is an 11.1% difference in violent crime and a 9.6% difference in property crime. Rape, robbery, burglary and larceny all decreased from 2016 to 2017 (Table 26). There was a very slight increase in aggravated assault, and an increase in motor vehicle theft (Table 26).

Chart 23 shows the total domestic violence offense rate compared to the state's. Hardee's rate is higher.

Hardee County has a higher rate of alcohol related crashes resulting in injuries (Table 27). Alcohol abuse was also identified as one of the three most urgent risks to health and safety in Hardee County (Community Health Survey). The number of alcohol related charges rose from 21 in 2016 to 36 in 2017 (Table 28).

The number of charges for methamphetamines decreased from 93 in 2016 to 84 in 2017 (Table 28).

Florida Youth Substance Abuse Survey

The Florida Youth Substance Abuse Survey (FYSAS) is a collaborative effort between the Florida departments of Health, Education, Children and Families, Juvenile Justice, and the Governor's Office of Drug Control. It is based on the "Communities That Care" survey, which assesses risk and protective factors for substance abuse, in addition to substance abuse prevalence, and other problem behaviors in adolescents.

The FYSAS was administered to students in 6th-12th grade in February of 2016 and was given to 829 students.

During the Forces of Change assessment, trending drug abuse issues were discussed. Particularly marijuana and electronic cigarettes or vaporizers.

Drug Free Hardee addresses alcohol, tobacco, and other drug use through social norming campaigns that are used within the middle and high school. UthMpact meets at the high school during the school year and STAND (Students Together Against Negative Decisions) meets at the junior high. Together these clubs work to impact their schools and bring down the number of students who report using any substance.

Tobacco Free Hardee works to change policy in Hardee County regarding tobacco and its use. Some of the focus areas include: tobacco free worksites, tobacco free parks, tobacco point of sale, and youth initiation. Students Working Against Tobacco or SWAT is a student club available at both the junior and senior high schools in Hardee County through Tobacco Free Hardee.

An alarming 43.3% of Hardee County High School students have reported using vaporizers/electronic cigarettes in their lifetime, while only 33.9% reported statewide. 16.3% of Hardee County High School students reported using in the last 30 days. The state rate was only 12.8%. Hardee County middle school students also reported usage at a higher rate of 24.2% while the state rate was 14.6% for their lifetime. The last 30 days was also higher than the state's 5.1%, Hardee's rate was 10.2%. (Chart 24) There is no trending information for e-cigarettes, as this is the first year the question was asked.

Chart 24

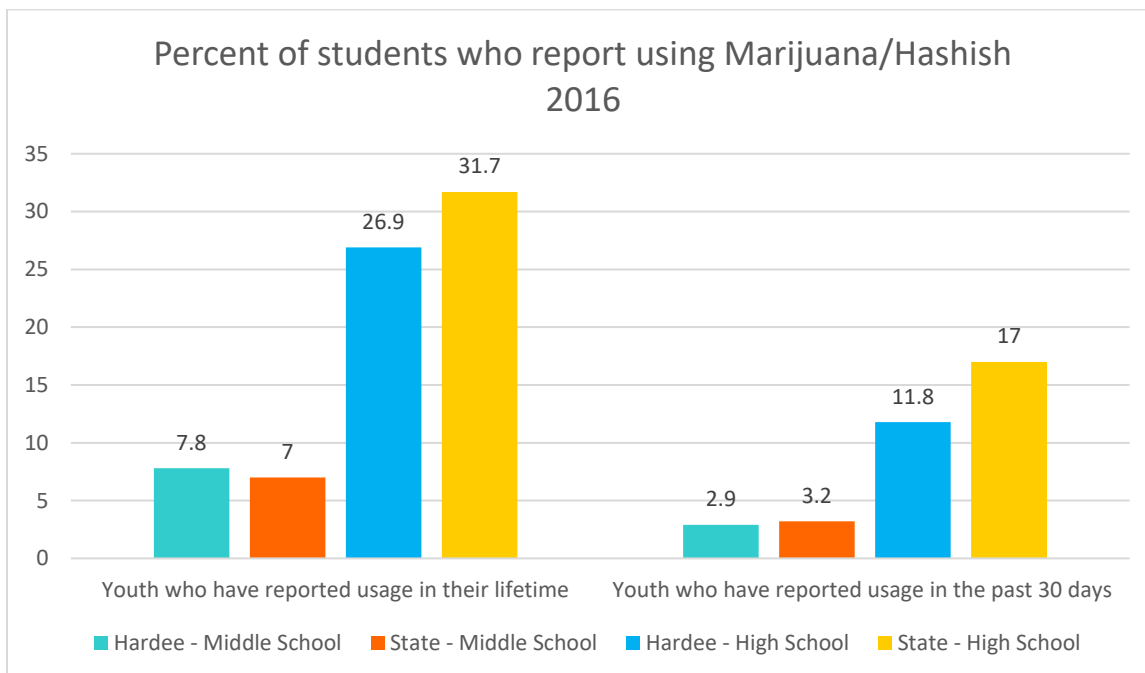

Source: Florida Youth Substance Abuse Survey

The number of students who reported using marijuana/hashish in their lifetime or in the past 30 days is less than the state's rate for most of the categories, except for middle school students who report using marijuana/hashish in their lifetime. Hardee students reported at 7.8% while the state rate was only 7% (Chart 25).

Marijuana past 30-day use dropped in middle school students from 2014 to 2016 (Chart 25). There was no data for the high school in 2014, however usage dropped in high school students from 2012 to 2016 (Chart 26).

Chart 27 includes information on alcohol and binge drinking among middle and high school aged students. Hardee County middle school students are more likely to have used alcohol or to binge drink than their Statewide counterparts. The amount of high school students in Hardee County that binge drank or used alcohol in the past 30 days is slightly less likely than the state rates.

Mental Health

Adults with good mental health has been increasing since 2010. In 2016, 89.4% reported having good mental health (Table 29). However, the average number of days where poor mental health or physical health interfered with activities of daily living in the past 30 days has been steadily increasing (Chart 28). The current number in Hardee County is 7.1 while the state is 5.7.

Table 29

Adults with good mental health, Overall		
Year	Hardee	Florida
2007	90.2% (85.6 - 93.5)	90.3% (89.6 - 91.0)
2010	85.6% (81.1 - 90.1)	88.2% (87.4 - 89.0)
2013	88.8% (83.3 - 94.2)	87.3% (86.4 - 88.1)
2016	89.4% (86.5 - 92.4)	88.6% (87.9 - 89.3)

Next Step: Community Health Improvement Plan (CHIP)

Dissemination Plan

This Community Health Assessment will be utilized by the Health Care Task Force, the Florida Department of Health in Hardee, and other community partners. The Community Health Assessment can be used to identify and implement action steps for improvement and the creation of a CHIP.

This document will be disseminated through multiple channels including:

- Florida Department of Health in Hardee County's website
- Link to document provided to community partners for distribution
- Copies provided at December 2018 Health Care Task Force meeting and future meetings
- Social media post created to share with community partners including link to where CHA can be found
- Press release created and shared with the Herald Advocate (local newspaper)
- Presentation to Board of County Commissioners
- Presentation to local City Commissioners and Town Council
- Presentations to civic organizations
- Emailed to community members for distribution

Thank you to the individuals and organizations that contributed to the 2018 Community Health Assessment.

What Does a Healthy Hardee Look Like?

Life Coaching

- Post-Secondary School Planning
- Safety Net (Second Chances)
- Increase Graduation Rate
- Increase Mentorship Programs
- Work with Early Learning Centers to Increase Family Education
- Teen Pregnancy Education

Infrastructure

- Transportation
- Living Wage
- Affordable Housing
- Early Learning and Affordable Childcare
- Build Strong Community Partnerships
- Increase Infrastructure and Complete Streets to have Walkable Access
- A Community that is Well Prepared for All Emergencies, Both Natural and Man-Made.

Healthy Lifestyles

- "True" Community Garden
- "Mooga" Youth Yoga Program
- Community Bridge
- Celebrating Positives
- Increase School and Community Gardens
- Nutrition Education for All Ages
- Local Engaging Recreation
- Built Environment to Support Movement/Exercise
- Local Activities to Engage Youth

Community Partnerships

- Inventory and Recruit Partners
- Engage Ministerial Alliance
- Central Resource Location
- Leverage Worksite Partnership for Health
- Businesses as Partners in Health
- Engage Additional Stakeholders (County Government, Community Members)

Obtainable Housing

- Housing- Sufficient for all income levels and family sizes
- Housing Options

Health Literacy

- Increase Awareness and Ways to Prevent Diabetes (chronic illness)
- Community Based Promotion of Healthy Life Choices (eg. walking groups & cooking classes)
- Healthy Women of Child Bearing Age

Access to Affordable Healthcare

- Community Dental Clinic
- Mental Health Accessibility
- Decrease Substance Abuse
- Pediatric Urgent Care (Healthy Kids)
- Access to Free Medical Care
- Access to Essential Health Services including primary care, mental health, and dental
- Medical Facility (24/7)
- Samaritan's Touch
- Mobilize/Recruit/Attract Physicians

Data to Assess and Evaluate

- Access to and Utilization of Adult/Senior Data

Develop and Implement Realistic Education Goals/Philosophy

- Education System in which students feel safe; encouraged to pursue personal goals. Comfortable pursuing vocational goals. Teaching of 'soft skills'
- Focus on Education: Increase high school graduation rate and college attendance

2017 Hardee County Community Health Survey

The Health Care Task Force wants your opinion on community health issues in Hardee County. The results of this survey will be used to identify the greatest health concerns needing to be addressed in the next three years within our community.

We ask that you take a few moments of your time to share your thoughts and help us contribute to a healthier Hardee. Your input is greatly appreciated.

If you have taken this survey before, thank you for your time and opinions.

Important Community Qualities

1. What do you believe are the three most important qualities that make a community healthy and improve the quality of life? (Select up to three.)

Acceptance of diverse cultures and races	Caring neighbors	Parks and recreation
Access to health insurance	Clean environment (air, water, trash)	Religious or spiritual values
Access to health services (e.g. specialists, referrals, counseling, medication)	Good jobs and a healthy economy	Resources for the elderly
Access to healthy and affordable foods	Good schools	Smoke-free public areas
Access to public transportation	Healthy babies and children	Strong families
Affordable living (e.g. housing and utilities =	Low crime and safe neighborhoods.	
Arts and cultural events	Low disease rates (e.g. diabetes, high blood pressure, cancer, asthma)	
Other (please comment)		

Hardee County Challenges

2. What do you believe are the three greatest "health problems" in Hardee County? (Select up to three.)

Child abuse/neglect	HIV / AIDS	Minor vehicle crash injuries and deaths
Chronic disease (e.g. cancer, heart disease, high blood pressure, diabetes, asthma)	Homelessness	Overweight and obesity
Cost of medications	Homicide	Pollution
Dental problems	Hunger	Rape/sexual assault
Disability	Infant Death	Sexually transmitted diseases (STDs)
Domestic violence	Infectious diseases (e.g. hepatitis, TB, etc.)	Suicide
Elder health care (e.g. arthritis, hearing, vision loss)	Lack of health insurance	Teen pregnancy
Firearm-related injuries	Mental health/substance abuse	Unintentional falls/injuries
Other (please comment)		

Appendix C

3. What do you believe are the three most urgent risks to health and safety in Hardee County: (Select up to three.)

Access to firearms by children	Lack of crosswalks, sidewalks, and bicycle lanes	Racism and intolerance
Alcohol abuse	Lack of physical activity	Tobacco use, e-cigarettes, nicotine use
Being overweight	Not getting “shots” to prevent disease	Unsafe or unprotected sex
Dropping out of school	Not using seatbelts, child safety seats, helmets	Unsafe driving
Drug abuse	Poor eating habits	
Gangs and juvenile violence	Postponing health care or medication	
Other (please comment)		

Rank Your Satisfaction
