## Introduction

The Florida Department of Health is pleased to release the 2020 Florida Behavioral Risk Factor Surveillance System (BRFSS) State Data. The Florida BRFSS has been collecting and reporting health behavior data since 1986. The 2020 BRFSS Survey interviewed 10,567 Florida adults aged 18 years and older.

This statewide telephone survey is the only source of state-specific, population-based estimates of the prevalence of various health conditions and related risk behaviors among Florida residents aged 18 and older. The purpose of this survey is to gather information regarding personal health and risk behaviors, selected medical conditions, and preventive health care practices among Florida adults. These data can be used to: (1) determine priority health issues and identify populations at risk for illness, disability, and death; (2) plan and evaluate prevention programs; (3) educate the community and policy makers about disease prevention; and (4) support community policies that promote health and prevent disease.

The following data tables present the survey data on a variety of issues related to health status, health care access, lifestyle, chronic illnesses, and disease prevention practices. Each indicator was analyzed by sex, race/ethnicity, age, education, income, and marital status.

Since BRFSS respondents are randomly selected, measures of prevalence and mean are subject to random sample errors. Each measure listed in the data tables includes the 95\% confidence interval (CI). If the Cls overlap between subpopulations (e.g., males compared to females), there is no statistically significant difference in the prevalence rates. However, if the Cls do not overlap, there is a statistically significant difference. For example, if the Cl for men is $21.4 \%-24.5 \%$ and the Cl for women is $29.4 \%-32.5 \%$, then there is a statistically higher prevalence of women having that particular indicator compared to men as the two Cls do not overlap.

The Cls are determined by many factors, sample size in particular. As the data are divided for analysis by race/ethnicity, age, etc., the sample size for each group becomes smaller, the Cls become larger, and the estimates become less reliable. The significance of measures with very wide Cls should be interpreted with caution. Measures of prevalence and mean are excluded from the tables for any subpopulation with a sample size less than 30, which would yield statistically unreliable estimates.

The prevalence rates are adjusted, or "weighted," by the Centers for Disease Control and Prevention (CDC) to represent all Florida adults. Weighting is a procedure that adjusts for the chance of an adult being selected to complete the survey and for discrepancies between the adults who completed the survey and the overall population of Florida adults. The data were weighted to the respondent's probability of selection by county, as well as age, sex, marital status, race/ethnicity, education level, and housing type.

Due to a change in weighting methodology and the inclusion of cellular telephone responses starting in 2011, data from 2020 may not be comparable to data collected before 2011.

## 2020 Florida BRFSS Data Report Table of Contents

Health Status
Arthritis ..... 1
Asthma ..... 2
Cancer Prevalence ..... 3
Cardiovascular Disease ..... 4
Cholesterol Awareness ..... 6
Chronic Obstructive Pulmonary Disease ..... 9
Depression ..... 10
Diabetes ..... 11
Disability ..... 14
Fall-Related Injury ..... 19
Hypertension Awareness \& Control ..... 20
Kidney Disease ..... 21
Oral Health ..... 22
Overweight \& Obesity ..... 23
Health-Related Prevention
Cancer Screening/Breast ..... 25
Cancer Screening/Cervical ..... 26
Cancer Screening/Colorectal ..... 28
Cancer Screening/Prostate ..... 31
HIV/AIDS Screening ..... 32
Immunization ..... 33
Injury Prevention ..... 35
Health-Related Behaviors
Alcohol Consumption ..... 36
Physical Activity \& Nutrition ..... 37
Tobacco Use \& Exposure ..... 38
Health Status \& Quality of Life ..... 42
Health Care Access \& Coverage ..... 50

Chronic Obstructive Pulmonary

Coronary Artery Disease (CAD)

Coronary Heart Disease (CHD)
Current Smoker*
Depressive Disorders

Diabetes

E-Cigarettes

Emphysema

Usual activities, such as self-care, work, or recreation.

Individual aged 18 years or older.
Most common symptom of coronary artery disease (CAD); chest pain or discomfort that occurs if an area of the heart muscle does not get enough oxygen-rich blood.
Joint inflammation; term used in the public health field to describe more than 100 rheumatic diseases and conditions that affect joints, the tissues which surround the joint, and other connective tissue; pattern, severity, and location of symptoms can vary.

Disease that affects the lungs; causes repeated episodes of wheezing, breathlessness, chest tightness, and nighttime or early morning coughing.

For women, consumption of 4 or more drinks during a single occasion in the past 30 days; for men, consumption of 5 or more drinks during a single occasion in the past 30 days.

Also called blood sugar; refers to the level of glucose, the main sugar the body makes from the food we eat, that is found in the bloodstream.

The force of the blood against the artery walls; two levels of blood pressure measured, the highest, or systolic, occurs when the heart pumps blood into the blood vessels, and the lowest, or diastolic, occurs when the heart rests.

See Blood Glucose

A number calculated from a person's height and weight; provides a reliable indicator of body fatness for most people; used to screen for weight categories that may lead to health problems.

General name for a group of diseases; when cells in a part of the body begin to grow out of control, forming new, abnormal cells and sometimes invading (growing into) other tissues.
A substance the body uses to produce hormones, vitamin $D$, and food-digesting acids. Too much cholesterol in the blood over an extended period can increase the risk of coronary heart disease, heart attack, or angina.

A long-term condition in which the airways that carry air to the lungs become inflamed and produce too much mucus, making it difficult to get air into and out of the lungs.

Diseases of long duration and generally slow progression (e.g., heart disease, stroke, cancer, diabetes); represent the leading causes of mortality worldwide.

Term that refers to a group of diseases that cause airflow blockage and breathingrelated problems, including emphysema and chronic bronchitis.
Most common type of heart disease; occurs when a substance called plaque builds up on the inner walls of the arteries that supply blood to the heart, called coronary arteries; most common cause of a heart attack.

See Coronary Artery Disease (CAD)
Combination of everyday smoker and some days smoker.
Mental illnesses characterized by a profound and persistent feeling of sadness or despair and/or a loss of interest in things that once were pleasurable; disturbance in sleep, appetite, and mental processes are a common accompaniment.
General term for diabetes mellitus; disease in which blood glucose levels are above normal.

An e-cigarette, also known as an electronic cigarette, is a device that allows a user to inhale nicotine and other vapors.

Long-term, progressive disease of the lungs that primarily causes shortness of breath; tissues necessary to support the physical shape and function of the lungs are destroyed. See also Chronic Obstructive Pulmonary Disease (COPD).

## GLOSSARY

## 2020 Florida Behavioral Risk Factor Surveillance System Data

| Exercise | See Physical Activity |
| :---: | :---: |
| Fibromyalgia | A musculoskeletal condition causing widespread muscle and joint pain and fatigue. |
| Flu | Contagious respiratory illness caused by influenza viruses; can cause mild to severe illness, and at times can lead to death. |
| Flu Shot | Influenza vaccine; an inactivated vaccine (containing killed virus) that is given with a needle, usually in the arm. The flu vaccine can also be administered as an attenuated vaccine (containing weakened, live virus) by a spray, mist, or drop in the nose. |
| Former Smoker | Adults who reported smoking at least 100 cigarettes in their lifetimes but reported not smoking now. |
| Gout | A form of arthritis caused by too much uric acid in the blood that causes pain, stiffness, and swelling of a joint. |
| Health Behavior | An action taken by a person to maintain, attain, or regain good health and to prevent illness. |
| Health Care Coverage | Health insurance, pre-paid plans such as HMO's, government plans such as Medicare. |
| Health Care Provider | A person who by education, training, certification, or licensure is qualified to and is engaged in providing health care to patients (e.g., medical doctor, nurse practitioner, physician assistant, registered nurse). |
| Health Risk Behavior | An action taken by a person that is associated with higher than average rates of morbidity or mortality (e.g., lack of physical activity, poor nutrition, tobacco use, excessive alcohol consumption). |
| Healthy Weight | Having a body mass index (BMI) ranging from 18.5 to 24.9 ; BMI is calculated using selfreported height and weight. |
| Heart Attack | Most commonly caused by coronary artery disease (CAD); occurs when a section of the heart muscle dies or gets damaged because of reduced blood supply. |
| Heavy Drinking* | For women, consumption of more than 1 drink per day on average in the past 30 days; for men, consumption of more than 2 drinks per day on average in the past 30 days. |
| High Blood Cholesterol | Condition where there is too much cholesterol in the blood for an extended period of time; increases the risk of coronary heart disease, heart attack, or angina. |
| High Blood Pressure | Condition where the blood circulates through the arteries with too much force; tires the heart, harms the arteries, and increases the risk of heart attack, stroke, and kidney problems. |
| Hispanic | Adults of Cuban, Mexican, Puerto Rican, South or Central American, or other Spanish culture or origin, regardless of race; self-reported demographic variable. |
| HIV | Human immunodeficiency virus (HIV) damages a person's body by destroying immune system cells, which are crucial to helping the body fight diseases; can lead to acquired immune deficiency syndrome (AIDS). |
| Hypertension | See High Blood Pressure |
| Influenza | See Flu |
| Kidney Disease | Also called renal disease; general term for any damage that reduces the functioning of the kidney. |
| Mental Health | A state of well-being in which the individual realizes his or her own abilities, can cope with the normal stresses of life, can work productively and fruitfully, and is able to make a contribution to his or her community. |
| Muscle Strengthening Recommendations* | Performance of muscle-strengthening activities, such as activities using body weight, weight machines, free weights, or elastic bands, at least two times per week in the past 30 days. |
| Never Smoked* | Adults who reported smoking less than 100 cigarettes in their lifetime. |
| Non-Hispanic Black | Adults not of Hispanic culture or origins reporting membership in only the black race category; self-reported demographic variable. |

## GLOSSARY

## 2020 Florida Behavioral Risk Factor Surveillance System Data

| Non-Hispanic White | Adults not of Hispanic culture or origins reporting membership in only the white race category; self-reported demographic variable. |
| :---: | :---: |
| Non-Smoker* | Combination of former smoker and never smoked. |
| Obese | Having a body mass index (BMI) that is greater than or equal to 30.0 ; BMI is calculated using self-reported height and weight. |
| Obesity | A condition characterized by being obese. |
| Overweight | Having a body mass index (BMI) ranging from 25.0 to 29.9 ; BMI is calculated using selfreported height and weight. |
| Personal Doctor | A health care provider that an adult identifies as their personal health care provider. |
| Physical Activity | Any bodily movement produced by the contraction of skeletal muscle that increases energy expenditure above basal level and that enhances or maintains physical fitness and overall health and wellness. |
| Pneumococcal Vaccination | Vaccine given with a needle, usually in the arm, to prevent pneumococcal pneumonia. |
| Pneumonia | Infection of the lungs, usually caused by bacteria or viruses, that can cause mild to severe illness. |
| Poor Mental Health | Adults who report that their mental health, which includes stress, depression, and problems with emotions, was not good on 14 or more of the previous 30 days. |
| Poor Physical Health | Adults who report that their physical health, which includes physical illness and injury, was not good on 14 or more of the previous 30 days. |
| Pre-Diabetes | A condition in which an individual's blood sugar is high, but not high enough to be diagnosed as diabetes. |
| Race/Ethnicity | A measure that combines an adult's ethnicity status (Hispanic/non-Hispanic) and race status (e.g., white; black; other); self-reported demographic variable. |
| Routine Checkup | A general physical exam; does not include exams conducted for a specific injury, illness, or condition. |
| Sex | The condition or character of being male or female; self-reported demographic variable. |
| Smoking | Inhalation of the smoke (gases and hydrocarbon vapors) generated by slowly burning tobacco. |
| Stroke | Sometimes called a brain attack; occurs when a clot blocks the blood supply to the brai | or when a blood vessel in the brain bursts.

## 2020 Florida Behavioral Risk Factor Surveillance System Data Report

## Healthy People 2030 Objectives

## Alcohol Consumption

SU-10. Reduce the proportion of people aged 21 years and over who engaged in binge drinking in the past month

## Arthritis

A-02. Reduce the proportion of adults with arthritis whose arthritis limits their activities

## Cancer Screening

C-05. Increase the proportion of females who get screened for breast cancer
C-07. Increase the proportion of adults who get screened for colorectal cancer
C-09. Increase the proportion of females who get screened for cervical cancer

## Cardiovascular Disease

HDS-01. Improve cardiovascular health in adults
HDS-02. Reduce coronary heart disease deaths
HDS-03. Reduce stroke deaths

## Cholesterol Awareness

HDS-06. Reduce cholesterol in adults

## Diabetes

D-01. Reduce the number of diabetes cases diagnosed yearly
D-04. Increase the proportion of adults with diabetes who have a yearly eye exam
D-06. Increase the proportion of people with diabetes who get formal diabetes education
D-07. Increase the proportion of adults with diabetes using insulin who monitor their blood sugar daily
V-04. Reduce vision loss from diabetic retinopathy

## Family Planning

FP-01. Reduce the proportion of unintended pregnancies

## Hypertension Awareness \& Control

HDS-05. Increase control of high blood pressure in adults

## Immunization

IID-09. Increase the proportion of people who get the flu vaccine every year

## Injury Prevention

OA-03. Reduce the rate of emergency department visits due to falls among older adults

## Kidney Disease

CKD-01. Reduce the proportion of adults with chronic kidney disease
CKD-02. Increase the proportion of adults with chronic kidney disease who know they have it

## 2020 Florida Behavioral Risk Factor Surveillance System Data Report

## Healthy People 2030 Objectives

## Oral Health

$\mathrm{OH}-08$. Increase use of the oral health care system
$\mathrm{OH}-05$. Reduce the proportion of adults aged 45 years and over who have lost all their teeth

## Overweight \& Obesity

NWS-03. Reduce the proportion of adults with obesity

## Physical Activity

PA-01. Reduce the proportion of adults who do no physical activity in their free time

## Sleep

SH-03. Increase the proportion of adults who get enough sleep

## Tobacco Use \& Exposure

TU-15. Increase successful quit attempts in pregnant women who smoke
TU-01. Reduce current tobacco use in adults
TU-02. Reduce current cigarette smoking in adults
TU-03. Reduce current cigarette, cigar, and pipe smoking in adults
TU-11. Increase past-year attempts to quit smoking in adults
TU-14. Increase successful quit attempts in adults who smoke
