

Florida Arbovirus Surveillance

Week 35: August 30-September 5, 2026

Arbovirus surveillance in Florida includes endemic mosquito-borne viruses such as West Nile virus (WNV), Eastern equine encephalitis virus (EEEV), and St. Louis encephalitis virus (SLEV), as well as exotic viruses such as dengue virus (DENV), chikungunya virus (CHIKV), Zika virus (ZIKV), and California encephalitis group viruses (CEV). Malaria, a parasitic mosquito-borne disease, is also included. During the period of August 30-September 5, 2026, the following arboviral activity was recorded in Florida.

WNV activity: No human cases of WNV infection were reported this week. One horse with WNV infection was reported in Suwannee County. Twenty-six sentinel chickens tested positive for antibodies to WNV in Alachua, Brevard, Citrus, Hillsborough, Leon, Manatee, Orange, Pasco, Pinellas, and Walton counties. In 2026, positive samples from two symptomatic humans, two asymptomatic blood donors, 106 sentinel chickens, one horse, and seven mosquito pools have been reported from 18 counties.

SLEV activity: No human cases of SLEV infection were reported this week. No sentinel chickens tested positive for antibodies to SLEV this week. In 2026, one sentinel chicken has been reported from one county.

EEEV activity: No human cases of EEEV infection were reported this week. One horse with EEEV infection was reported in Washington County. No sentinel chickens tested positive for antibodies to EEEV this week. In 2026, positive samples from 41 sentinel chickens and seven horses have been reported from 15 counties.

International Travel-Associated Dengue: Twenty-four cases of dengue were reported this week. In 2026, 160 travel-associated dengue cases have been reported.

Dengue Cases Acquired in Florida: Thirty-eight cases of locally acquired dengue were reported this week. In 2026, 111 cases of locally acquired dengue and 16 mosquito pools have been reported from six counties.

International Travel-Associated Chikungunya Fever Cases: Five cases of chikungunya fever were reported this week. In 2026, 60 cases of travel-associated chikungunya fever have been reported.

Chikungunya Fever Cases Acquired in Florida: No cases of locally acquired chikungunya fever were reported this week. In 2026, no cases of locally acquired chikungunya fever have been reported.

International Travel-Associated Oropouche Fever cases: No cases of Oropouche fever were reported this week. In 2026, no cases of travel-associated Oropouche fever have been reported.

International Travel-Associated Zika Fever Cases: No cases of Zika fever were reported this week. In 2026, no travel-associated Zika fever cases have been reported.

Zika Fever Cases Acquired in Florida: No cases of locally acquired Zika fever were reported this week. In 2026, no cases of locally acquired Zika fever have been reported.

Advisories/Alerts as of August 29, 2026: Alachua, Brevard, Duval, Leon, Orange, Palm Beach, Pasco, and Walton counties are currently under a mosquito-borne illness advisory. Hillsborough, Miami-Dade, and Pinellas counties are currently under a mosquito-borne illness alert.

There are currently multiple travel health notices from the Centers for Disease Control and Prevention related to mosquito-borne diseases.

2026 Human Case Summary

West Nile Virus Illness Acquired in Florida: In 2026, two human cases of WNV illness acquired in Florida have been reported in Alachua (May) and Walton (July) counties. Two asymptomatic blood donors have been reported in Duval (August) and Leon (July) counties.

2026 International Travel-Associated Chikungunya Cases: Sixty cases with onset in 2026 have been reported in individuals with travel history to a chikungunya-endemic area in the two weeks prior to onset. Counties reporting cases were: Alachua, Broward (3), Collier (2), Hernando, Hillsborough (8), Lee, Miami-Dade (32), Monroe (2), Okaloosa, Orange (2), Osceola, Palm Beach (4), Pinellas, and Seminole. Countries of origin were Bolivia (2), Brazil (2), Cameroon, Cuba (42), Guyana, Nicaragua (10), Sri Lanka, and Surinam. One case was reported in a non-Florida resident.

2026 International Travel-Associated Dengue Cases: One hundred sixty cases with onset in 2026 have been reported in individuals with travel to a dengue-endemic area in the two weeks prior to onset. Counties reporting cases were: Bay, Brevard (2), Broward (15), Collier (2), Duval (2), Hillsborough (8), Lake, Lee (8), Manatee, Miami-Dade (91), Monroe, Orange (5), Osceola, Palm Beach (8), Pinellas (2), Polk (3), Sarasota, Seminole (2), St. Johns, St. Lucie (4), and Walton. Two cases were reported in non-Florida residents. In 2026, 138 cases of dengue reported in Florida have been serotyped by PCR. Please see the table below for a breakdown of cases by country of origin and serotype.

Veterinary Cases**

**Veterinary cases are reported by date of onset. Only mammalian veterinary cases are included in the graphs.

One horse with WNV infection was reported in Suwannee County. One horse with EEEV infection was reported in Washington County.

Sentinel Chickens

The table below is for the reporting of confirmatory laboratory results from this week. Some of the samples were collected at earlier dates. The date of collection is recorded for samples collected on that day along with the total number of positives and the corresponding seroconversion rate for the week the sample was collected.

Twenty-six sentinel chickens tested positive for antibodies to WNV in Alachua, Brevard, Citrus, Hillsborough, Leon, Manatee, Orange, Pasco, Pinellas, and Walton counties.

Dead Birds

The Fish and Wildlife Conservation Commission (FWC) collects reports of dead birds, which can be an indication of arbovirus circulation in an area. This week, 27 reports representing a total of 37 dead birds, including seven crows, seven raptors, and one dove were received from 17 counties.

In 2026, 1359 reports representing a total of 3160 dead birds (67 crows, 29 jays, 399 raptors, 153 doves) were received from 52 of Florida's 67 counties.

Case tallies included in the weekly Florida arbovirus surveillance report include confirmed and probable cases for EEE, WNV infection, SLE, dengue, chikungunya, and malaria by date of onset. Suspect cases are not included. Activity is mapped by county of exposure rather than county of residence. Case definitions being used in Florida are consistent with national criteria provided by the Council of State and Territorial Epidemiologists (CSTE) and may be viewed at: www.floridahealth.gov/diseases-and-conditions/disease-reporting-and-management/disease-reporting-and-surveillance/index.html. Case tallies reported by CDC do not include suspect cases and cases are reported by patient state of residence rather than where the exposure occurred. Data is provided by county health departments, Department of Health Bureau of Public Health Laboratories, Department of Agriculture and Consumer Services, mosquito control agencies, Florida Fish and Wildlife Conservation Commission, medical providers and veterinarians. Equine cases are provided by the Department of Agriculture and Consumer Services.
