

Florida Arbovirus Surveillance

Week 36: September 6-12, 2026

Arbovirus surveillance in Florida includes endemic mosquito-borne viruses such as West Nile virus (WNV), Eastern equine encephalitis virus (EEEV), and St. Louis encephalitis virus (SLEV), as well as exotic viruses such as dengue virus (DENV), chikungunya virus (CHIKV), Zika virus (ZIKV), and California encephalitis group viruses (CEV). Malaria, a parasitic mosquito-borne disease, is also included. During the period of September 6-12, 2026, the following arboviral activity was recorded in Florida.

WNV activity: One human case of WNV infection was reported in Duval County. No horses with WNV infection were reported this week. Twenty-six sentinel chickens tested positive for antibodies to WNV in Bay, Citrus, Hillsborough, Leon, Orange, Pasco, Pinellas, St. Lucie, and Walton counties. In 2026, positive samples from three symptomatic humans, two asymptomatic blood donors, 132 sentinel chickens, one horse, and seven mosquito pools have been reported from 19 counties.

SLEV activity: No human cases of SLEV infection were reported this week. No sentinel chickens tested positive for antibodies to SLEV this week. In 2026, one sentinel chicken has been reported from one county.

EEEV activity: No human cases of EEEV infection were reported this week. No horses with EEEV infection were reported this week. One sentinel chicken tested positive for antibodies to EEEV in Hernando County. In 2026, positive samples from 42 sentinel chickens and seven horses have been reported from 16 counties.

International Travel-Associated Dengue: Twenty-six cases of dengue were reported this week. In 2026, 186 travel-associated dengue cases have been reported.

Dengue Cases Acquired in Florida: Forty-one cases of locally acquired dengue were reported this week. In 2026, 152 cases of locally acquired dengue and 16 mosquito pools have been reported from six counties.

International Travel-Associated Chikungunya Fever Cases: Six cases of chikungunya fever were reported this week. In 2026, 66 cases of travel-associated chikungunya fever have been reported.

Chikungunya Fever Cases Acquired in Florida: One case of locally acquired chikungunya fever was reported this week. In 2026, one case of locally acquired chikungunya fever has been reported from one county.

International Travel-Associated Oropouche Fever cases: No cases of Oropouche fever were reported this week. In 2026, no cases of travel-associated Oropouche fever have been reported.

International Travel-Associated Zika Fever Cases: No cases of Zika fever were reported this week. In 2026, no travel-associated Zika fever cases have been reported.

Zika Fever Cases Acquired in Florida: No cases of locally acquired Zika fever were reported this week. In 2026, no cases of locally acquired Zika fever have been reported.

Advisories/Alerts as of August 29, 2026: Alachua, Brevard, Leon, Orange, Palm Beach, Pasco, and Walton counties are currently under a mosquito-borne illness advisory. Duval, Hillsborough, Miami-Dade, and Pinellas counties are currently under a mosquito-borne illness alert.

There are currently multiple travel health notices from the Centers for Disease Control and Prevention related to mosquito-borne diseases.

2026 Human Case Summary

West Nile Virus Illness Acquired in Florida: In 2026, three human cases of WNV illness acquired in Florida have been reported in Alachua (May), Duval (August), and Walton (July) counties. Two asymptomatic blood donors have been reported in Duval (August) and Leon (July) counties.

2026 International Travel-Associated Chikungunya Cases: Sixty-six cases with onset in 2026 have been reported in individuals with travel history to a chikungunya-endemic area in the two weeks prior to onset. Counties reporting cases were: Alachua, Broward (3), Collier (2), Hernando, Hillsborough (8), Lee, Miami-Dade (37), Monroe (2), Okaloosa, Orange (3), Osceola, Palm Beach (4), Pinellas, and Seminole. Countries of origin were Bolivia (2), Brazil (2), Cameroon, Cuba (47), Guyana, Nicaragua (11), Sri Lanka, and Surinam. One case was reported in a non-Florida resident.

2026 Chikungunya Cases Acquired in Florida: One case of locally acquired chikungunya fever has been reported in Miami-Dade County with onset in August.

2026 International Travel-Associated Dengue Cases: One hundred eighty-six cases with onset in 2026 have been reported in individuals with travel to a dengue-endemic area in the two weeks prior to onset. Counties reporting cases were: Bay, Brevard (2), Broward (17), Collier (2), Duval (2), Hillsborough (11), Lake, Lee (8), Manatee, Miami-Dade (109), Monroe, Orange (5), Osceola, Palm Beach (11), Pinellas (2), Polk (3), Sarasota, Seminole (2), St. Johns, St. Lucie (4), and Walton. Two cases were reported in non-Florida residents. In 2026, 162 cases of dengue reported in Florida have been serotyped by PCR. Please see the table below for a breakdown of cases by country of origin and serotype.

Veterinary Cases**

**Veterinary cases are reported by date of onset. Only mammalian veterinary cases are included in the graphs.
No veterinary cases were reported this week.

Sentinel Chickens

The table below is for the reporting of confirmatory laboratory results from this week. Some of the samples were collected at earlier dates. The date of collection is recorded for samples collected on that day along with the total number of positives and the corresponding seroconversion rate for the week the sample was collected.

Twenty-six sentinel chickens tested positive for antibodies to WNV in Bay, Citrus, Hillsborough, Leon, Orange, Pasco, Pinellas, St. Lucie, and Walton counties. One sentinel chicken tested positive for antibodies to EEEV in Hernando County.

Dead Birds

The Fish and Wildlife Conservation Commission (FWC) collects reports of dead birds, which can be an indication of arbovirus circulation in an area. This week, 25 reports representing a total of 54 dead birds, including five crows, three raptors, and three doves were received from 11 counties.

In 2026, 1384 reports representing a total of 3214 dead birds (72 crows, 29 jays, 402 raptors, 156 doves) were received from 52 of Florida's 67 counties.

Case tallies included in the weekly Florida arbovirus surveillance report include confirmed and probable cases for EEE, WNV infection, SLE, dengue, chikungunya, and malaria by date of onset. Suspect cases are not included. Activity is mapped by county of exposure rather than county of residence. Case definitions being used in Florida are consistent with national criteria provided by the Council of State and Territorial Epidemiologists (CSTE) and may be viewed at: www.floridahealth.gov/diseases-and-conditions/disease-reporting-and-management/disease-reporting-and-surveillance/index.html. Case tallies reported by CDC do not include suspect cases and cases are reported by patient state of residence rather than where the exposure occurred. Data is provided by county health departments, Department of Health Bureau of Public Health Laboratories, Department of Agriculture and Consumer Services, mosquito control agencies, Florida Fish and Wildlife Conservation Commission, medical providers and veterinarians. Equine cases are provided by the Department of Agriculture and Consumer Services.
